PART I.

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1915.

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., November 1, 1915.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1915, being the forty-third annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1914.

OPERATIONS OF THE MINTS AND ASSAY OFFICES.

In many ways the fiscal year 1915 was the most eventful in the history of the mint service; certainly it was as regards the New York assay office and the San Francisco Mint. The movement of gold from the United States in the first three months and the movement of this metal to our shores in the last three months were on such a tremendous scale that the patience, skill, and capacity of the officials and employees at these institutions were sorely taxed. Since July 1, 1915, the volume of business has increased so steadily and so rapidly that the records show the total value of the deposits at the New York assay office for the first four months of the fiscal year 1916 to be $126,224,600 or nearly that of the deposits for the whole of 1908—$131,792,227—which has heretofore been this office's banner fiscal year.

The mint at San Francisco received between April 1 and November 1, 1915, more than $50,000,000 in foreign gold coin and bullion from Australia, Japan, and China, as compared with $4,346,000 during the entire calendar year 1914.

Very little, comparatively speaking, of the foreign gold received has been in fine bars. Much the major portion has been in coin, chiefly British sovereigns and Japanese yen, and the prompt melting and storing of it have presented problems calling for extraordinary energy and some ingenuity.

In order that no injustice might be worked to depositors of foreign coin because of the delay incident to the melting and refining of it, the regulations governing the handling of precious metals were so modified, with your approval, as to permit the payment of 99 per

cent of the value of said deposits, ascertained upon their being weighed immediately after receipt, when presented in sums of $1,000,000 and over. Of course such deposits come only from banking houses of recognized standing, and when advantage is taken of this regulation the depositor is required to give a guaranty in writing of the integrity of the coin or bars involved.

The former regulation permitted advance payment of only 90 per cent of the value ascertained when the deposit was weighed, 8 per cent more after the trial assay, and the remaining 2 per cent following the final assay. It can readily be seen how that regulation would have operated against the depositor in the loss of interest when several millions of dollars were involved in one transaction as has so frequently been the case.

Another important change which you authorized in the regulations is the reporting by the assayer, on deposits of fine gold bars or coin, in deposits of not less than 5,000 ounces, to one-tenth of one-thousandth instead of one-quarter of one-thousandth. I found that the loss to the depositor on large deposits was frequently considerable, so I had the honor to recommend to you what has proved to be a most equitable arrangement.

A new regulation of importance to miners and prospectors is that which you recently issued, upon my recommendation, reducing the charge for ore assays at the minor assay offices and the Philadelphia Mint from $3 for gold and silver to $1 for these metals and $1 for each of the following metals determined: Copper, tin, zinc, iron, lead, and tungsten. This has already resulted in a material increase of business at the several institutions, has made the mint service more responsive to public requirements, and has been generally commended by those whose needs it is intended to meet. The minor assay offices should be so operated as to make them as serviceable to the miner and prospector as the Department of Agriculture is to the farmer, or they should be abolished. Receiving, melting, assaying, and forwarding bullion deposits only do not justify the expenditure of the money necessary to their maintenance.

It is an interesting fact that in the past fiscal year coinage was executed for more foreign countries at the Philadelphia Mint than in any previous 12 months of that institution's history. These countries were Cuba, Costa Rica, Salvador, and Ecuador. Some of the increased business may have been due to the unsettled conditions in Europe, whose mints a number of the Latin-American countries have long patronized, but all of it is business which promises to continue. Furthermore, it is evidence of an increasing friendly feeling toward the United States on the part of our neighbors to the south. Every possible courtesy in the way of facilitating shipments and simplifying methods of payment was extended to the representatives of these countries.

Although a considerable amount of silver was purchased by my predecessor in the fall of 1914, the stock on hand of this precious metal was so low in July, 1915, that I found it necessary to purchase, with your approval, 4,375,000 ounces in order to be prepared for what was clearly to be—and in due time proved to be—an unprecedented demand for subsidiary coins. The highest price paid was $0.4963 an ounce, or 2.005 cents above the minimum paid. The average price paid was $0.48724 an ounce. The entire amount was

bought between August 3 and September 17, and constituted the largest purchase of silver made in a similar period since the repeal, November 1, 1893, of the purchase clause of the act approved July 14, 1890. This transaction resulted in a goodly advance in the price of the white metal, and so stimulated the market, whose unsteadiness had threatened a partial paralysis of the silver-mining industry all over the world, that production of silver has continued practically without abatement. It also had the effect of aiding the production of gold, inasmuch as all silver bullion carries a certain amount of gold.

In commenting on this purchase the Boston News Bureau said:

> These prices are much below those of a year ago, when the Director of the Mint bought at a corresponding part of the year 1,774,000 fine ounces. For 200,000 ounces of this, bought on July 31, a price of $0.5175 was paid; 200,000 ounces cost $0.5150 on August 7; 1,174,000 ounces were bought at $0.52 on August 11; and 200,000 ounces at $0.55 on August 28, 1914.

A distinct achievement of the mint service in the fiscal year 1915 was the melting and spinning of platinum for use in the many Government laboratories.

This metal is recovered in the electrolytic refineries only from the various kinds of bullion deposited. The quantities contained in individual deposits are very small; in practically every instance it is too small to be detected in assaying, and we could not, therefore, compensate the depositor for it, even if the law permitted payment for other than the gold and silver contents of bullion. Furthermore, as bullion of all classes is massed and melted before it passes through the refinery, it would be impossible to determine what particular class carries this metal. In rare cases, where it is evident that a deposit contains platinum the depositor is so advised and is at liberty to withdraw his deposit.

It has been the policy of the Government to sell this rare metal from time to time to the highest bidder, but owing to the fact that Russia, the largest producer of platinum, has curtailed its exportation and thereby caused a marked advance in the price, I have decided to hold so much of the metal recovered as shall be needed for use in the laboratories of the several departments of the Government.

During the past few months equipment has been placed in the New York assay office for melting this metal and the mint at Philadelphia has perfected machinery for spinning it and manufacturing it into utensils used in the laboratories of the Government institutions.

I beg further to inform you that the work of this bureau has been considerably simplified by the elimination of several forms calling for reports that were found to be unnecessary or which duplicated information contained in other reports; also that the cost report system which has been in operation in the mints and in the assay office at New York for several years has been so modified as to remove all cumbersome features and yet be productive of all information necessary to economical and efficient administration.

The following mint service institutions were operated during the fiscal year 1915: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which has a large trade in bars of fine gold and silver; mints at New Orleans and Carson City, and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood,

these being bullion-purchasing agencies for the large institutions. Refineries were operated at the New York, Denver, and San Francisco institutions.

The original deposits of gold at the mint service offices during the fiscal year amounted to $166,175,438, an increase of $19,878,883 over the deposits of last year.

The coinage of the year amounted to $46,086,458.90, of which $40,533,317.50 was gold, $3,353,032.50 was silver, $1,718,776.95 was nickel, and $481,331.95 was bronze. This amount includes $30,000 in $50 pieces, $25,000 in $2.50 pieces, and $5,500 in $1 gold pieces; also $30,000 in silver half-dollar pieces struck at the San Francisco mint for the Panama-Pacific International Exposition.

There were also coined at the Philadelphia Mint 368,050 gold pieces, 10,765,400 silver pieces, and 11,024,300 nickel pieces for Cuba; 5,000 gold pieces and 859,425 silver pieces for Costa Rica; 2,500,000 silver pieces for Ecuador, and 9,208,000 nickel pieces for Salvador. The mint at San Francisco coined for the Philippine Islands 1,870,000 silver pieces and 500 bronze pieces.

The seigniorage on United States coinage executed totaled $3,687,564.41, of which $1,862,088.97 was on subsidiary silver coins and $1,825,475.44 was on minor coins.

The amount of silver purchased during the fiscal year was 3,395,694.87 fine ounces, costing $1,736,599.16, at an average price of 51 cents per ounce, fine. There were also received 491,021.14 fine ounces of United States mutilated silver coins, valued at $678,792, and Philippine silver coins for recoinage containing 136,247.17 fine ounces at a cost value of $89,032.55.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On December 31, 1914, the stock of domestic coin in the United States was $2,252,316,331, of which $1,500,743,924 was gold and $568,271,663 was silver dollars, and $183,300,744 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at $304,354,958, and the stock of silver bullion was 6,291,673 fine ounces.

PRODUCTION OF GOLD AND SILVER.

The production of the precious metals in the United States during the calendar year 1914 is as follows: Gold $94,531,800, and silver 72,455,100 fine ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1914 was $42,728,893, of which $34,621,619 was new material. Silver consumed amounted to 29,233,117 fine ounces, of which 22,474,787 fine ounces was new material.

EXPORTS OF GOLD COIN.

The net exports of United States gold coin for the fiscal year 1915 were $23,445,028.

COINAGE FOR THE PANAMA-PACIFIC EXPOSITION.

The act of January 16, 1915, provides for the following coinage of gold and silver pieces for the Panama-Pacific International Exposition Co.:

Denomination.	Pieces.	Value.
$50 gold pieces	3,000	$150,000
$2.50 gold pieces	10,000	25,000
$1 gold pieces	25,000	25,000
50-cent silver pieces	200,000	100,000

The act further provides that one-half of the $50 gold pieces struck "shall be similar in shape to the octagonal $50 gold pieces issued in California in 1851."

The design submitted by Mr. Robert Aitken for the $50 piece, that by Mr. Charles Keck for the $1 piece, and those by Mr. Charles E. Barber, the engraver of the mint at Philadelphia, for the $2.50 gold and the 50-cent silver pieces, were accepted by the Director of the Mint and approved by the Secretary of the Treasury.

Following is a description of the coins above referred to:

Fifty-dollar piece, weight 1,290 grains, 0.900 fine.—Obverse: Minerva, the goddess of wisdom, skill, contemplation, spinning, weaving, and of agriculture and horticulture. Reverse: Owl, sacred to Minerva, the accepted symbol of wisdom, perched upon a branch of western pine. Dolphins, suggesting, as they encircle the central field, the uninterrupted water route made possible by the Panama Canal, occupy the angles of the octagonal coin.

Two-and-a-half-dollar piece, weight 64.50 grains, 0.900 fine.—Obverse: Columbia, representing the United States, seated on the mythical sea horse, riding through the waters of the canal, with caduceus in grasp, the emblem of trade and commerce, inviting the nations of the world to use the new way from ocean to ocean. Reverse: American eagle, resting on a standard bearing the motto "E Pluribus Unum."

One-dollar piece, weight 25.8 grains, 0.900 fine.—Obverse: Head, representing labor, through whose efforts the Panama Canal became a reality. Reverse: Two dolphins, indicating the meeting of the two oceans.

Fifty-cent piece, weight 192.9 grains, 0.900 fine.—Obverse: Columbia scattering fruits and flowers, attendant with cornucopia or horn of plenty, to signify the boundless resources of the West. Background, Golden Gate illumined by the rays of the setting sun, with the inscription "Panama-Pacific Exposition, 1915." Reverse: Shield of the United States surmounted by American eagle and supported on the one side by a branch of oak, emblem of strength, and on the other side by the olive branch of peace. The inscriptions are "United

States of America," with value of the coin and the motto "In God we trust."

Work was immediately commenced upon the dies, which were shipped after completion to the mint at San Francisco, at which place the first coinage of these pieces was delivered on May 28, and up to the end of the fiscal year (June 30) there were struck the following:

	Pieces.
$50 gold pieces (octagonal)	609
$2.50 gold pieces	10,000
$1 gold pieces	5,500
50-cent silver pieces	60,000

The $50 gold pieces were struck on the large medal press shipped from the Philadelphia Mint for this purpose.

ESTIMATES FOR THE FISCAL YEAR 1917.

The total of estimates for the mint service for the fiscal year 1917, including the bureau office in Washington, is $1,160,480, which compares with estimates of $1,177,580 for the fiscal year 1916 and appropriations for the latter year of $1,136,180.

APPROPRIATIONS, EXPENSES, AND INCOME.

Amounts appropriated for the fiscal year 1915 totaled $1,147,771.68, which, together with unexpended balances of permanent appropriations amounting to $12,700.13 and reimbursements within the service and from other Government services of $161,604.17, aggregated an available total of $1,322,075.98.

The total expenses chargeable to appropriations were $1,149,376.92; those chargeable to income were $7,553.90; aggregate, $1,156,930.82.

The income, including $3,687,564.41 seigniorage realized by the Treasury from the mint service, totaled $4,262,896.32.

Income and expenses are itemized below:

INCOME.

Mint charges on bullion		$340,595.93
Proceeds of stock medals and proof coins sold		3,589.85
Charges for manufacture of special medals		9,924.96
Charges on foreign coinage executed		146,099.67
Charges for work done for other institutions, etc		5,579.54
Receipts from special assays of bullion and ores		2,749.15
Surplus bullion recovered		49,296.31
Gain on bullion shipments to refineries	$182.30	
Less contra losses	26.37	
		155.93
Proceeds of proof gold and silver formerly on inventory		1,660.73
Commission on telephone calls		1.37
Proceeds of sale of old material		727.27
Proceeds of sale of by-products		14,951.20
		575,331.91
Seigniorage of subsidiary silver coinage	$1,862,088.97	
Seigniorage on minor coinage—nickel	1,409,332.91	
Seigniorage on minor coinage—bronze	416,142.53	
		3,687,564.41
Total		4,262,896.32

EXPENSES.

Salaries of officers and clerks	$273,859.21
Wages of workmen	618,320.64
Contingent expenses (including equipment), less amounts to reimburse wastage and loss on sale of sweeps	230,789.99
Wastage of operative departments (gold and silver)	2,758.38
Loss on operative sweeps sold	3,955.02
Freight on bullion and coin shipments between mints and assay offices	19,693.68
	1,149,376.92
Wastage of operative departments (minor metal)[1]	1,072.35
Expense of distributing minor coin [1]	6,481.55
Total	1,156,930.82
Net income of the Government from the mint service	3,105,965.50
Total	4,262,896.32

Appropriations, reimbursements, expenditures, and balances, all offices, fiscal year 1915.

CONSOLIDATED INCOME AND EXPENDITURES.

A complete statement of the income and expenditures of the Treasury on account of the mint service, including seigniorage on the silver and minor coins, is shown in the statement following.

Consolidated statement of income and expenditures of the entire mint service for the fiscal year 1915.

EXPENDITURES.

Compensation of employees:			
Mints and Assay Offices—			
Salaries appropriation	$250,300.34		
Wages appropriation	618,320.64		
		$868,620.98	
Bureau of the Mint, salaries appropriation		23,558.87	
			$892,179.85
Equipment, stores, and other expenses:			
Mints and Assay Offices—			
Contingent appropriation (including $2,758.38 operating waste of precious metals and $3,955.02 loss on assay value of precious metals contained in operative sweeps sold)	231,768.26		
Equipment of New York assay office building, appropriation	1,093.25		
Freight on bullion and coin shipments between mints and assay offices, appropriation	19,693.68		
		252,555.19	
Bureau of the Mint, contingent appropriation		4,641.88	
			257,197.07
			1,149,376.92

EARNINGS.

Deductions on bullion deposits:				
Parting and refining charges			$252,689.29	
Melting charges			50,166.67	
Assaying and stamping charges			5,650.83	
Alloy charges			14,466.52	
Fine-bar charges			17,622.62	
				$340,595.93
Special assays of bullion and ores				2,749.15
Proceeds of sale of medals and proof coins				3,589.85
Reimbursements to appropriations:	Contingent.	Wages.	Total.	
For manufacture of machinery and appliances for Government institutions, etc	$1,891.39	$3,688.15	$5,579.54	
For manufacture of special medals	7,215.57	2,709.39	9,924.96	
For manufacture of Philippine coinage	2,597.49	5,195.01	7,792.50	
For manufacture of foreign coinage:				
San Salvador	5,584.27	20,297.64	25,881.91	
Costa Rica	666.76	3,018.73	3,685.49

GOLD-CERTIFICATE BARS.

At the close of the fiscal year 1915 refined gold bars, duly stamped with their weight, fineness, and value, in accordance with the provisions of the act of Congress approved March 2, 1911, providing for the issue of gold certificates against gold bullion and foreign gold coin, were held at the several mints and the assay office at New York as follows:

San Francisco Mint	$155,325,634.33
Denver Mint	26,152,624.80
New York Assay Office	62,230,129.67
Total	243,708,388.80

DEPOSITS OF GOLD BULLION.

The value of all gold bullion contained in original deposits at the mints and assay offices during the fiscal year 1915 was $166,175,437.79. The redeposits during the year, consisting of bullion transferred from one office to another, and bars bearing the stamp of one of the mints or assay offices, amounted to $65,270,187.22. The value of the gold bullion and uncurrent domestic and foreign coin received, including redeposits, amounted to $231,445,625.01, which was the total of gold receipts at all offices.

Statements which show the classification of deposits, the source of domestic bullion by States and Territories, and the receipts at the several offices of the service appear in tabular form in this volume elsewhere.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 1,106,910 fine ounces, of the value of $22,881,855, and foreign gold coin containing 745,955 fine ounces, of the value of $15,420,256, were deposited, which was received from the following countries:

Country.	Crude bullion.		Refined bullion.		Coin.

DEPOSITS AND PURCHASES OF SILVER.

The deposits of silver at the mints and assay offices during the fiscal year ended June 30, 1915, for return to depositors in fine or unparted bars, with the weight and fineness stamped thereon, aggregated 3,949,845.48 fine ounces. The United States assay office at New York received the greater part of these deposits.

The Government of the Philippine Islands deposited at the United States mint at San Francisco, Philippine silver coins issued under the act of March 2, 1903, containing 136,179 fine ounces, for recoinage into coins of reduced weight and fineness as authorized by the act of June 23, 1906.

The purchases and deposits of silver bullion at the mints and assay offices of the United States during the fiscal year 1915 were as follows:

Items.	Fine ounces.	Cost.
Commercial bars purchased	1,942,814.60	$1,007,637.10
Local purchases	725,467.93	363,708.72
Purchased from Salvador (remnants)	196.41	94.28
Partings, charges, and fractions	718,940.77	360,623.33
Mutilated and uncurrent coin	1,748.66	875.09
Philippine coins for recoinage	136,179.10	88,892.35
Philippine assay coins	68.07	37.98
Domestic assay coins	272.36	319.10
Surplus bullion	5,130.25	2,787.42
Deposit melting room grains	1,123.89	554.12
For return in fine bars	3,949,845.48	1,990,851.90
Total	7,481,787.52	3,816,381.39

DEPOSITS OF FOREIGN SILVER BULLION AND COIN.

Foreign silver bullion containing 2,130,138 fine ounces and foreign silver coin containing 383,445 fine ounces were received from various countries, as follows:

Country.	Bullion.		Coin.
	Crude.	Refined.	
	Fine ozs.	*Fine ozs.*	*Fine ozs.*
British Columbia	36,736	49,928

MINT OF THE UNITED STATES AT PHILADELPHIA.

The mint was in operation throughout the year.

ASSAYING DEPARTMENT.

The operations of this department during the fiscal year 1915 were as follows:

Item.	Samples operated on.		
	Gold.	Silver.	Gold and silver.
Deposits	4,421	561	.....
Ingots	297	2,051	.....
Purchases	.....	2,067	.....
Bullion samples and ore assays	.....	.....	173
Assayer's bars	.....	.....	34
Coiner's bars	.....	.....	43
Melter's bars	.....	.....	62
Superintendent's bars	.....	.....	128
Sweep samples	.....	.....	14
Total	4,718	4,679	454

The number of assays made was as follows:

Deposits (gold and silver)	42,560	Quartermaster's department	56
Ingots (gold and silver)	5,568	New York bars	21
Purchases	2,802	Superintendent	40
Special assays	735	Assay commission	134
Melter's bars	377	Sweep assays	70
Ore assays	97	Nickel and bronze	23
Coiner's bars	151		
Mint Bureau	543	Total	53,177

The average cost per assay during the year was $0.686 (approximate).

In addition to the above, 561 ounces of proof gold and 594 ounces of proof silver were made.

Of the 297 melts of gold ingots made in the melting department, 56 were returned for remelting, although within the standard fineness required by law, to be thoroughly mixed. Of the 2,051 melts of silver ingots, 1 was returned for remelting.

The fineness of the gold ingots passed was:		The fineness of the silver ingots passed was:	
3 melts at	900.4	9 melts at	898
9 melts at	900.3	19 melts at	898.25

MELTING AND REFINING DEPARTMENT.

During the fiscal year this department was in continuous operation, the silver-ingot operations covering the entire period. Gold-ingot work commenced in November, 1914, and continued intermittently throughout the year. Bronze work was light, beginning after the 1914 settlement and working up to November; then resuming bronze operations in February, working lightly in that month and March,

and closing with six working days in June. The nickel-alloy work started in September and the department continued making ingots of this alloy until settlement.

The number of ingot melts made and amount of metal sent to melting rooms is shown by table given below:

Ingot melts made.

Metal.	Number made.	Ounces melted.
Gold	297	851,077.254
Silver	2,051	7,529,811.53
Nickel	1,759	6,323,517.99
Bronze	3,821	11,223,553.56
Total	7,928	25,927,960.334

During the fiscal year this department received from the superintendent gold bullion containing by assay 1,002,088.702 fine ounces, having a coinage value of $20,715,011.93. The amount of silver bullion received contained 8,082,003.92 fine ounces, having a coinage value of $11,172,633.73.

This department returned to the superintendent the following amounts in ingots: Gold, 679,714.290 fine ounces; silver, 7,392,554.91 fine ounces; nickel, 10,520,660.90 troy ounces; bronze, 6,085,890.20 troy ounces.

Upon settlement of the accounts of this department there was found a gain of 295.794 fine ounces of gold, valued at $6,114.60, and 2,300.49 fine ounces of silver, valued at $3,180.22. In either case the surplus appearing in settlement was readily and satisfactorily accounted for by considering special recoveries for the year and acknowledging well-known sources of gain.

Sweep-celler operations.

Department.	Number barrels.	Net weight.	Gold.	Silver.
		Pounds.	*Fine oz.*	*Fine oz.*
Melting and refining	78	40,436	113.622	1,016.12

Total	.....	.....	206.824	1,213.29

Bronze recovered, 10,767 troy ounces; nickel recovered, 29,253 troy ounces.

In the last year's report was noted the awarding of the contract to the Selas Co. for their gas-boosting machine. This system was installed in duplicate and has been in successful operation for the past six months or more. These machines are operated alternately, running each one week at the time. The principle of this system consists in thoroughly mixing one part of gas (city gas) with three parts of air (nonexplosive mixture). The gas is drawn in, likewise the air, by the same positive-pressure blower of the involute type. In passing through ports of fixed areas the gas and air always bear the same proportion, which in our case is 3.1 to 1. After mingling,

the mixed gases, of definite and invariable composition, are compressed to 76-inch water column at machine and distributed to furnaces. The volume of air necessary to complete combustion is induced to flow through air shutters of Bunsen burners at furnaces. Here the air may be controlled within a moderate amount and normally no further adjustments are necessary, the gas valve being fully open. With this equipment it is no longer necessary to light fires at 6 a. m. in order to produce three cupro-nickel heats by 3 p. m. All fires are now started at 8 a. m., each melter attending to the lighting up of his own furnace, which enables him to examine the condition of his furnace and crucible in a more thorough manner than when one man attends to starting up five or more furnaces, as was the old practice. The rapidity with which melts may be made now, due to the higher temperature secured, is essential to the proper working of our cupro-nickel alloy, besides being the factor that makes this system cheaper than unaided city gas.

A number of oil furnaces were sent to us for trial and numerous tests were made. We found none suited to our requirements. Then, too, the continual receipts of oil in wagon tank lots, the transfer of same to our storage tank, the necessary uncleanliness and inconvenience of handling and distributing oil fuel in an institution of this kind, made us conclude that gas was the fuel best suited to our requirements. Gasoline having increased in price, and apparently decreased in thermal units, it was decided some time ago to shut down our gas-making plant. It was then we had city gas piped to all parts of the house. We used this unaided gas in the melting room for about six months, until we found that the "Selas" gas gave us quicker and higher temperature heats at less cost. It is now planned to cast cupro-nickel ingots 25 per cent heavier than has been our practice for the past two years, during which time we increased their weight six times. In other words three years ago our minor coinage ingots weighed 4 pounds; we expect to make bars now weighing 30 pounds. This is contemplated because we are looking into the question of overhauling or scraping our bars before coinage operations proceed, believing this practice will make for more perfect coin.

COINING DEPARTMENT.

During the fiscal year ended June 30, 1915, the mint coined double eagles, eagles, half eagles, and quarter eagles, half dollars (proof only), quarter dollars, dimes, 5 and 1 cent pieces. In addition the following denominations for the following-named countries were coined:

Cuba: Cinco pesos (gold); pesos, 40, 20, and 10 centavos (silver); 5, 2, and 1 centavos (nickel).

Costa Rica: Two colones (gold); 50, 10, and 5 centimos (silver).

Ecuador: Twenty centimos (silver).

Salvador: Five, 3, and 1 centavos (nickel).

During this period the coining department received from the superintendent 850,660.785 fine ounces of gold for coinage, which was operated upon, and from which there was produced 733,612 pieces of double eagles, eagles, half eagles, and quarter eagles of the value of $5,252,817.50, amounting to 254,105.046 fine ounces of gold. For the Government of Cuba 368,050 pieces of cinco pesos, of the

value of $1,840,250, amounting to 89,022.094 fine ounces. For the Government of Costa Rica 5,000 pieces of 2 colones, of the value of $4,653.54 in United States gold coin, amounting to 225.115 fine ounces. This, and 502,372.401 fine ounces in clippings, condemned coin, blanks, bars, and sweeps were delivered to the superintendent prior to settlement, and there was delivered in settlement 4,916.970 fine ounces in coin and bars. The entire operation showed a wastage of 19.127 ounces of the value of $395.39, being 4.50 per cent of the legal allowance. The percentage of coin to the amount of metal operated upon was 40.95. The low percentage is due to the fact that the pieces of the smaller denominations were first struck and weighed after coinage.

The coining department also received during the same period from the superintendent for coinage 7,673,445.27 fine ounces of silver, of which 7,620,289.47 were operated upon and from which there was produced 16,552,500 pieces of half dollars, quarter dollars, and dimes of the value of $1,660,132.50, which contained 1,200,907.08 ounces of fine silver. For the Government of Cuba, 10,765,400 pieces of pesos, 40, 20, and 10 centavos, of the value of $3,276,481.32 in United States subsidiary coin value, containing 2,370,124.68 fine ounces of silver. For the Government of Ecuador, 2,500,000 pieces of 20 centimos, of the value of $500,000 in United States subsidiary coin, containing 361,687.50 ounces; and for the Government of Costa Rica, 859,425 pieces in 50, 10, and 5 centimos, of the value of $113,173.73 in United States subsidiary coin, containing 81,867.05 fine ounces of silver, together with 3,410,009 fine ounces in clippings, condemned coin, blanks, bars, and sweeps were delivered to the superintendent prior to settlement, and 248,386.55 fine ounces in ingots, coin, coin condemned, coin unfinished, blanks, and bars were delivered at settlement. Upon this operation there was a wastage of 454.79 fine ounces of the value of $252.78, being 5.97 per cent of the legal allowance. The percentage of coin produced to the amount operated upon was 53.57.

The department during the year received 11,929,930 troy ounces of nickel ingots, from which there was produced from the ingots operated upon 19,457,039 pieces, of the value of $972,851.95 in United States 5-cent pieces, containing 3,093,509.08 troy ounces. For the Government of Cuba, 11,024,300 pieces of 5, 2, and 1 centavos, of the face value of $241,198, containing 1,171,147.35 troy ounces. For the Government of Salvador, 9,208,000 pieces of 5, 3, and 1 centavos, of the face value of $206,080, containing 1,025,011.20 troy ounces; all of which, and 5,259,248.20 troy ounces of condemned coin and blanks, were delivered to the superintendent prior to settlement. There was also delivered at settlement 1,371,402.50 troy ounces in ingots, strips, coin clippings, condemned coin, and unfinished blanks. On the entire operation there was a wastage of 9,611.67 ounces, of the value of $146.96. The percentage of coin produced from the ingots operated upon was 49.28. The percentage of wastage was 00.08854.

There was also delivered to this department during the same period 7,704,833.40 ounces of bronze ingots and blanks, from which there was produced from the metal operated upon 2,832,020.20 ounces of 1-cent coin, of the value of $283,561.95, or 28,356,195 pieces. This amount, together with 1,816,432.70 ounces of clippings, condemned coin, and blanks, was delivered prior to settlement. The amount

returned at settlement was, ingots and strips, 2,503,561.40 ounces and 550,575.90 ounces unfinished coin and blanks. The wastage on this operation amounted to 2,243.20 ounces, of the value of $22.48. The percentage of wastage was 00.03829. The percentage of good coin produced to the amount operated upon was 48.35.

In addition to the bullion received for coinage the following shows the amount used in the manufacture of medals: Of the 1,104.865 fine ounces of gold received, 453.310 fine ounces were used in the manufacture of medals, which, together with 646.653 fine ounces in clippings and filings, were delivered to the superintendent prior to settlement, and 4.934 fine ounces in clippings and filings at settlement. The amount of silver received was 3,857.41, of which 1,835 fine ounces were used in the manufacture of medals, and that amount, with 2,031.03 ounces in clippings and filings, were delivered prior to settlement.

As will be seen by the operation of 25,183,199.06 ounces of bullion and metal for coinage and 4,962.28 ounces of bullion for medals there were produced 99,829,621 pieces of coin, of the value of $14,379,493.86 and 1,239 gold and silver medals. Upon this entire operation the wastage or loss amounted to $817.61.

ENGRAVING DEPARTMENT.

All the dies used in coining operations in all the mints are made in the engraving department at Philadelphia. The embossed-envelope dies used by contractors supplying stamped envelopes for the Post Office Department and postal savings bank are also made here; also dies for Army and Navy and other authorized public medals. The mint is reimbursed for the actual expenditures for labor and materials on these medal accounts.

The number of dies prepared for United States coinage last year, including 77 for special coins for the Panama-Pacific Exposition, was 2,690. In addition 75 dies were made for Philippine coinage, 44 for the Government of Costa Rica, 720 for the Government of Cuba, 60 for the Government of Ecuador, 220 for the Government of Salvador, 90 for the Post Office Department, 76 for medals, and 65 master dies and hubs; in all 4,040, as follows:

THE STATE OF THE NUMISMATIC COLLECTION.

The accessions to the collection of coins and medals for the fiscal year ended June 30, 1915, amounted to 342 specimens, of which 257 were coins and 85 were medals. The following analysis shows the distribution of these acquisitions as to metals and periods:

As to metals:		As to periods:	
Coins—	77	Coins—	
Gold	2	Antique	90
Electrum	161	Medieval	4
Silver	9	Modern	163
Nickel	8	Medals	85
Bronze			
Medals—	20		
Silver	62		
Bronze	3		
Aluminum			

Of the antique coins acquired the majority are Greek, and while these are chiefly of historical value, they include also a number of specimens of superior artistic die engraving. Among the latter are a few rare and beautiful gold coins of Syracuse and Carthage.

While only a few medieval coins, strictly speaking, were added, yet a number of gold coins, properly classed as modern, belong to the early years of the sixteenth century, and are, therefore, in fact more medieval than modern. These gold coins were issued by Venice, Genoa, and other Italian States, in which modern coinage, especially of gold, had its origin.

A noteworthy addition to the collection, from the point of view both of works of art and of popular interest, are specimens in bronze of the award medals of 7 out of the 10 Carnegie hero foundations. These medals were procured through the kind offices of the State Department, and include the awards of the foundations for Denmark, Great Britain, Holland, Italy, Sweden, and Switzerland, which, with the United States of America-Canadian medal, make an exhibition of more than usual interest. Similar funds have been established by Mr. Carnegie in Belgium, France, and Germany, and we have been promised specimens of their respective medals as soon as they have been produced.

The following persons and firms made donations of coins or medals to the collection during the fiscal year:

Carnegie Heldenfond, Holland: Copy of award medal.

Carnegie Hero Fund for Great Britain: Copy of award medal.

Joseph K. Davison's Sons, Philadelphia: Various medals.

Committee of New York Tercentenary Celebration: Bronze medal.

Fondazione Carnegie, Rome: Copy of award medal.

G. F. Kunz, chairman of committee: Samuel P. Avery medals.

Horace McFarland, New York City: Miscellaneous bronze coins and medal.

G. T. Morgan, Philadelphia: Bronze medal.

Navy Department, United States of America: Various award medals.

Dr. Francis C. Nicholas: Carbo, Sonora, Mexico—Necessity struck by constitutionalists.

A. A. Norris, Philadelphia: Silver assay commission medals.

William Poillon, New York City: Aluminum Masonic medals.

M. W. Stryker, president Hamilton College, Clinton, N. Y.: Silver medal.

John H. Stroer, Manitowoc, Wis.: Nickel coins of Holland.

F. T. Sung, Pekin, China: Chinese medals.

War Department, United States of America: Various award medals.

Whitehead & Hoag Co., Newark, N. J.: Bronze medals.

Faran Zerbe, department of medals, Panama-Pacific Exposition, San Francisco, Cal.: Silver official souvenir medal of Panama-Pacific International Exposition.

MACHINE SHOP.

In addition to the regular repairs and the upkeep of the machinery and appliances, the following new work was done for this mint:

Built and installed 2 automatic weighing machines; 2 turn-tables equipped with large ingot molds for the melting room; 2 upsetting machines for minor coinage; 1 coin-reviewing machine; 1 cadmium rod cutting machine for use in assay department; 6 dime feeder fingers; 6 sets double-eagle sectional coin collars; 20 one-cent collars; 25 five-cent nickel collars; 4 automatic hopper coin

feeders; 30 complete sets of baskets as repairs to automatic weighing machines. Three cutting presses are under construction and are about 40 per cent completed. Changing pipe system to suit the installation of Selas gas system.

A complete exhibit of minting processes was prepared, shipped to, and operated at the Grand Central Palace, New York City, during the expositions of the New York Edison Co., Red Cross, and Tercentenary. During this year we prepared a complete working exhibit of a mint, shipped to and installed it at the Panama-Pacific Exposition, San Francisco, Cal. For this exhibit the mint manufactured one 6-foot bullion balance and one full set of weights; one upsetting machine; one coin reviewing machine; one 6-inch lever shear; one coin-drying machine; one sand-blasting machine; two punches and beds and four collars for the souvenir medal; and 600 feet of brass railing to inclose exhibits was burnished and lacquered.

Punches, beds, and collars were made for the $50 octagonal and round gold pieces, and punches, beds, and collars for the $1 gold piece for the Panama-Pacific Exposition.

During the same period the following work was done in the shops for other institutions:

Completed and installed two 4-beam automatic weighing machines, one each in the New York and Chicago subtreasuries; three adjusting balances and six sets of weights for the New York subtreasury.

One cadmium rod cutting machine for the New York assay office.

Repairing one 3-foot bullion balance for Federal Reserve Bank, Atlanta, Ga.

Punches, beds, and collars for Costa Rican, Salvadorean, and Cuban coinage.

For Smithsonian Institution, five silver bars and discs.

For mint of the United States at San Francisco, Cal.: 16 sets double-eagle sectional gold collars; 5 sets eagle sectional gold collars; 10 nickel coin collars; 10 half-dollar coin collars; 4 sets of toggles for sectional collar device; repair parts for one automatic weighing machine.

For mint of the United States at Denver, Colo.: 6 sets double-eagle sectional gold collars; 6 sets eagle sectional gold collars; 6 sets quarter eagle coin collars; 6 sets half eagle coin collars; 50 knife edge guides and rest for automatic weighing machines; 20 baskets, center knife edges and parts for automatic weighing machines.

CARPENTER SHOP.

Besides the general repairs and upkeep of the machinery and appliances, the woodwork of the building and the furniture have been kept in repair and all painting and hardwood finishing done as required.

Six quartered oak lockers and two assay tables were built for the assay department.

An oak partition was built in the room of the curator of the cabinet, separating a portion for a washroom.

The gas meters in the basement were separated by a partition from the portion of the room used by the gatekeeper.

A monitor skylight was built on the roof over the blacksmith's shop.

About three-quarters of the work has been done on a coin and medal storage cabinet of 280 drawers for the use of the curator of the cabinet.

There has been constructed one coin-reviewing machine for the San Francisco Exposition and one for this mint; one sand-blasting machine for the New York Electric Exhibition; one copper-lined tank for the whitening room of this mint; two sets of counting boards for this mint and two sets for the Chicago Subtreasury.

The crating, boxing, and packing of machinery for the New York, San Diego, and San Francisco Expositions and of refinery appliances of the New York assay office, were done.

All shipping boxes required by the institution were manufactured, including 250 shipping boxes for Ecuador coin and 578 boxes for Salvador coin made by the mint.

All patterns necessary for the work of the mechanical departments are made in the carpenter shop.

SEWING ROOM.

The sewing room, besides making the necessary repairs to flags, awnings, window shades, towels, rugs, machine belts, etc., manufactured for this mint 230 pairs fire mitts, 143 pairs asbestos mitts, 5,576 aprons, sleeves and miscellaneous articles; and 59,200 coin bags received from the contractor were marked.

There were also manufactured for the New York assay office 1,200 aprons, 700 pairs sleeves, 500 pairs fire mitts, 500 pairs asbestos mitts, and 22,800 anode bags; 100 pairs fire mitts and 100 pairs asbestos mitts were made for the San Francisco mint and three pairs asbestos mitts for the Deadwood assay office.

PROOF COINS AND MEDALS.

The following table shows the number of proof coins and medals and their nominal value manufactured during the fiscal year:

Articles.	Pieces.	Nominal value.
Gold medals	305	$9,265.76
Silver medals	914	901.46
Bronze medals	14,032	5,419.88
Gold proof coins	220	1,920.00
Silver proof coins	919	256.40
Minor proof coins	1,539	46.31
Total	17,929	17,809.81

EMPLOYEES.

The total number of employees in this mint at the close of the fiscal year was 323, distributed in the several departments as follows:

General	165	Engraver's	8
Coining	94		
Melting and refining	45	Total	323
Assayer's	11		

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 77,289 having been shown through the building by the guides.

Number of deposits, 6,132; number of redeposits, 164; value of gold and silver deposits, including redeposits, $15,836,021.38; income, $1,978,212.61; expenses, $462,452.66; employees, 323.

MINT OF THE UNITED STATES AT SAN FRANCISCO.

INCREASE OF DEPOSITS.

The increase of deposits for the fiscal year 1915 over the fiscal year 1914 amounted to $24,585,314.71, and is explained in round figures by the gold received from the following countries:

Locality.	Fine ounces.	Value.
Japan (gold coin)	628,260	$12,987,286.00
China	306,424	6,334,346.00
Other foreign	16,171	338,648.00
California	67,870	1,402,997.00
Alaska	20,000	413,436.00
Philippine Islands	24,000	496,124.00
Other domestic	120,000	2,480,620.00
Total	1,182,725	24,453,457.00
Silver	.....	131,857.71
Total	.....	24,585,314.71

PANAMA-PACIFIC INTERNATIONAL EXPOSITION.

Under the direction of the Secretary of the Treasury and the Director of the Mint it has devolved upon the superintendent of the mint at San Francisco to maintain and operate an exhibit of the mint processes at the Panama-Pacific International Exposition. This exhibit occupies a floor space of 2,116 square feet in the Mines Building, where there is an exemplification of electrolytic refining, as well as the usual operations from the melting of the metal to the striking of the finished pieces. This work consists of striking the commemorative bronze and silver metals. The commemorative coins, consisting of the round and octagonal $50 gold coins, $2.50 gold coins, $1 gold coins, and 50-cent silver coins, are being struck at the mint.

In connection with the special coinage for the Panama-Pacific International Exposition, the striking at this mint of the first $50 piece ever coined by the Government was a memorable event marked by appropriate ceremonies.

The coin was struck on the large hydraulic press, which had been forwarded from the Philadelphia Mint for this special coinage. The press and the walls of the room were draped in the National colors, and the ceremony was participated in by over 100 invited guests.

CHANGES IN OPERATIONS AND NEW GENERAL EQUIPMENT.

An important change made in the operations at this mint during the year was the substitution of oil fuel for city gas in the melting department. Several years ago an attempt was made to install oil-

burning furnaces in this department, but it was abandoned as being unsatisfactory. Early in 1914 the superintendent, with the approval of the Director of the Mint, decided to give oil fuel a thorough try out. Three furnaces with an improved design of burner and an air superheater were installed and gave entire satisfaction, equaling gas in speed on all classes of metal, with a high economy. The results obtained with fuel oil were so satisfactory that it was decided to change all of the gas furnaces to oil furnaces. There are now seven completed furnaces and four nearing completion. Some trouble has been experienced with the fire brick melting down under the terrific heat. This trouble, however, will be overcome somewhat when the operators become more familiar with the furnace. A new type of furnace is now being tried that will be more satisfactory in this respect.

As regards the relative cost of city gas and fuel oil, the following is submitted: One thousand feet of city gas costs approximately $0.68 (based on our sliding scale) and contains 740,000 British thermal units. One barrel of California fuel oil, costing $0.92, contains 5,940,000 British thermal units. Taking the same cost, $0.68 in both cases, there is practically 5.9 more British thermal units in the oil than in 1,000 feet of city gas. The cost of oil for the fiscal year 1916 is $0.66½ per barrel, which will give a greater economy. The burners and superheater were designed and built at the mint, and the entire installation, with the exception of the settling chamber, was constructed by the mint force.

A new emergency signal system has been installed throughout the building, to notify the guard in case of trouble in any part of the building.

New lighting fixtures have been installed around the exterior of the building, and the contract has been let for an interior lighting system.

A milling and drilling machine, also a bench drill, has been purchased for the machine shop, also a precision lathe, bench buffer, bench drill, and grinder for the scale adjuster; also a pattern-maker's disk grinder for the carpenter. A new motor-driven feed pump and an automatic fuel-oil regulator has been installed in the boiler room. A Dodge rock crusher has been installed in the sweep cellar.

NEW EQUIPMENT FOR COINING DEPARTMENT.

During the past year speed controls were installed on rolling mills Nos. 2 and 3. These devices enabled the speed of the rolls to be increased 25 per cent as the strips approached their proper finished thickness. The speeding up on the long thin strips was of twofold benefit. It resulted in increasing the output of work per roll and in producing a more uniform thickness of the finished strips. To meet and balance the increased output of the rolls, similar speed controls were installed on the cutting presses, enabling them to work up to their full capacity.

In the adjusting room a visual electric safety device in the form of two minature electric lamps was installed on each of the automatic weighing machines, enabling the operator to instantly detect any stopping of the electric current operating the magnetic clamps.

Considerable trouble was experienced with the automatic weighing machines when operating upon gold blanks from the shaving machines. Small particles of gold shavings would adhere to the blanks and be carried into the delicate mechanism of the weighing machines. This danger and annoyance was overcome by the installation of an electrically driven rotary riddle, equipped with an automatic adjustable stop, which allowed the machine to operate long enough to remove the shavings and then automatically stopped it.

Hoods were placed over the rotary furnaces in the whitening room to carry off any escaping gases and surplus heat. This improvement bettered the working condition for the men employed in this room.

In the pressroom a screen bottom chute was attached to the double eagle upsetting machine to catch and save any particles of gold detached from blanks passing through the machine.

PRESENT COST AND INVENTORY SYSTEM.

This system has been in operation for the past fiscal year. It is of distinct advantage in checking up on operations and the work in the mint.

OPERATIONS FOR THE FISCAL YEAR 1915.

During the year the mint received 15,311 gold and silver deposits and 73 redeposits from the Carson Mint, containing 3,452,037.340 fine ounces of gold of the value of $71,359,945, and 1,846,201.66 fine ounces of silver at a subsidiary coinage value of $2,552,205.49. The receipts this year show an increase over last year of 6,068 deposits at an increased value of $24,585,314.71. The details covering classification of bullion and source of origin are set out in tables appearing in another part of this report.

The receipts of gold bullion were as follows:

Deposits		$71,104,329.76
Uncurrent United States coin transferred		9,179.27
Surplus bullion recovered		6,304.84
Redeposits		240,131.13
Total		71,359,945.00

The disposition of the gold bullion was as follows:

Bars paid depositors		$3,773.00
Sold in sweeps		11,663.71
Bars exchanged for coin		100,322.10
Coinage		29,490,992.50
Wastage		312.91
Total		29,607,064.22

Balance, receipts, and disbursements.

Balance on June 30, 1914, as per report		$166,270,031.06
Receipts fiscal year 1915, per above		71,359,945.00
Total		237,629,976.06
Disbursements fiscal year 1915, per above		29,607,064.22
Ledger balance June 30, 1915		208,022,911.84

The purchases, deposits, and redeposits of silver bullion at this mint during the fiscal year 1915 were as follows:

Items.	Fine ounces.	Cost.
Fine silver purchased	855,767.11	$445,688.23
Purchases and partings	372,285.11	187,912.92
Surplus bullion, sweeps, bars, proof, etc	2,088.16	1,134.12
For return in fine bars	460,097.07	233,110.05
Philippine Island coins transferred for recoinage	136,180.24	88,896.95
Mutilated and uncurrent coins	13,033.33	17,934.92
Total deposits and purchases	1,839,451.02	974,677.19
Redeposits from Carson	6,750.64	3,400.19
Total silver	1,846,201.66	978,077.38

Bars manufactured during the year.

Items.	Fine ounces.	Value.
Gold:		
Certificate	1,353,127.088	$27,971,619.39
For exchange for gold coin	4,853.082	100,322.10
For payment to depositors	182.517	3,773.00
Total gold bars	1,358,162.687	28,075,714.49
Silver: For payment to depositors	459,492.18	232,797.48

The gold certificate bars on hand at this mint June 30, 1915, amounted to $155,325,634.30.

For the government of the Philippine Islands this mint manufactured during the fiscal year 1915 silver coin as follows:

Denomination.	Pieces.	Value.	Metal consumed in coinage.	Value in United States subsidiary coin.
		Pesos.	*Fine ounces.*	
20 centavos	950,000	190,000	91,663.49	$126,716.42
10 centavos	920,000	92,000	44,388.55	61,363.12
Total coinage	1,870,000	282,000	136,052.04	188,079.54

The purchase of minor coinage metals during the year for the manufacture of United States coin was as follows: Copper, 1,102,281.63 troy ounces; cost, $10,392.94.

From October, 1908, to June 30, 1915, bronze 1-centavo pieces have been coined for the government of the Philippine Islands from new metal purchased and from old Spanish copper coins deposited for recoinage, as follows:

1 centavos from—	Value.
New metal purchased	₱185,238.00
Minor coins for recoinage	59,061.12
Total 1-centavo coinage	244,299.12

During the year minor coin was distributed to the amount of $185,270.55—in 5-cent nickels, $142,542.75; 1-cent bronze, $42,727.80; total, $185,270.55.

The minor-coin distribution expenses amounted to $78.92, viz: Coin sacks, $76.82; twine, $2.10; total, $78.92.

Minor coinage issued, melted, and amount outstanding:

Denomination.	Coined.	Issued.	On hand.	Melted.	Outstanding June 30, 1915.
Nickel, 5-cent	$404,800	$325,142.85	$79,657.15	$5,000	$320,142.85
Bronze, 1-cent	324,230	288,174.94	36,055.06	1,400	286,774.94
Total	729,030	613,317.79	115,712.21	6,400	606,917.79

The following table shows the coinage during the fiscal year 1915:

DOMESTIC COINAGE.

Denomination.	Pieces.	Value.
Gold	1,875,876	$29,490,992.50
Silver	3,284,000	809,000.00
Minor:		
5-cent	3,437,000	171,850.00
1-cent	4,577,000	45,770.00
Total minor coinage	8,014,000	217,620.00
Total domestic coinage	13,173,876	30,517,612.50

PHILIPPINE COINAGE.

Silver	1,870,000	₱282,000.00
Bronze	500	5.00
Total Philippine coinage	1,870,500	282,005.00

ASSAY DEPARTMENT.

MELTING AND REFINING DEPARTMENT.

The superintendent of melting and refining received from the superintendent of the mint during the fiscal year 1915, the following:

Gold account:	Fine ounces.	
In bullion	6,220,640.700	
Returned prior to settlement	3,763,712.409	
Returned at settlement	2,457,233.288	6,220,945.697
Surplus		304.779

Silver account:	Fine ounces.	
In bullion	3,033,588.18	
Returned prior to settlement	1,680,990.69	
Returned at settlement	1,354,600.63	3,035,591.32
Surplus		2,003.14

Refinery operations covering a period of six months were as follows:

Gold account:	Fine ounces.
Delivered to the refinery	1,316,108.282
Returned from the refinery	1,316,147.211
Surplus	38.929

Silver account:	Fine ounces.
Delivered to the refinery	364,838.07
Returned from the refinery	365,933.11
Surplus	1,095.04

The refinery also returned 5,495 pounds of copper, 211.70 troy ounces of platinum, 17.50 troy ounces of palladium, and 1.48 troy ounces of osmiridium.

The refinery earnings were as follows:

Charges collected on bullion treated	$34,120.09
By products (estimated value)	10,617.86
Total	44,737.95

Minor coinage metals.

Nickel account:	Troy ounces.	
Received	1,776,395.96	
Returned in ingots prior to settlement	720,880.70	
Returned at settlement	1,053,661.33	1,774,542.03
Operating wastage		1,853.93

Bronze account:	Troy ounces	
Reserved	1,023,076.33	
Returned in ingots prior to settlement	710,364.70	
Returned at settlement	308,103.00	1,018,467.70
Operating wastage		4,608.63
Total minor coinage metal operated upon		1,431,245.40

COINING DEPARTMENT.

The superintendent of the coining department received from the superintendent of the mint, gold, silver, nickel, and bronze during the fiscal year 1915, and returned same as follows:

Items.	Gold.	Fine ounces.	Silver.	Fine ounces.
Received prior to settlement, 1915		2,950,537.983		1,375,302.79
Returned prior to settlement, 1915	2,858,525.328		1,190,089.27	
Returned at settlement, 1915	91,997.518	2,950,522.846	185,125.92	1,375,215.19
Actual wastage		15.137		87.60

Items.	Nickel.	Troy ounces.	Bronze.	Troy ounces.
Received prior to settlement, 1915		860,103.20		811,425.40
Returned prior to settlement, 1915	844,276.03		690,211.98	
Returned at settlement, 1915	15,109.50	859,385.53	120,755.10	810,967.08
Actual wastage		717.67		458.32

During the same period the superintendent of the coining department operated on gold, silver, nickel, and bronze and made delivery to the superintendent of the mint as follows:

Items.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
Amount operated upon	2,816,245.890	1,212,819.38
Coin delivered to superintendent	1,426,626.760	721,409.20
Percentage of gold coin to amount operated upon	50.56	59.64

Items.	Nickel.	Bronze.
	Troy ounces.	*Troy ounces.*
Amount operated upon	845,143.60	674,254.70
Coin delivered to superintendent	552,920.73	458,549.58
Percentage of nickel coin to amount operated upon	65.41	68.00

The following table shows the coinage during the fiscal year 1915:

DOMESTIC COINAGE.

Denomination.	Pieces.	Value.
Double eagles	1,296,750	$25,935,000.00
Panama-Pacific International Exposition octagon $50	[1]609	30,450.00
Eagles	136,000	1,360,000.00
Half eagles	427,000	2,135,000.00
Quarter eagles, Panama-Pacific International Exposition	[1]10,017	25,042.50
Gold dollar, Panama-Pacific International Exposition	5,500	5,500.00
Total gold	1,875,876	29,490,992.50
Half dollars	984,000	492,000.00
Half dollars, Panama-Pacific International Exposition	60,000	30,000.00
Quarter dollars	420,000	105,000.00
Dimes	1,820,000	182,000.00
Total silver	3,284,000	809,000.00
MINOR COINAGE.		
Five-cent nickels	3,437,000	171,850.00
One-cent bronze	4,577,000	45,770.00
Total minor	8,014,000	217,620.00
Total domestic coinage	13,173,876	30,517,612.50

PHILIPPINE COINAGE.

20 centavos	950,000	₱190,000.00
10 centavos	920,000	92,000.00
1 centavo	500	5.00
Total	1,870,500	282,005.00

[1] Includes assay pieces Panama-Pacific Exposition coins.

During the year 39,779 visitors were shown through the mint by the guides.

On June 30, 1915, there were 118 officers and employees in the mint, as follows:

General department	58
Coining department	20
Melting and refining department	30
Assaying department	10
Total	118

MINT OF THE UNITED STATES AT DENVER.

This mint was in operation during the entire fiscal year, the coinage being of the denominations of eagles, half eagles, quarter eagles, half dollars, quarter dollars, dimes, nickels, and bronze cents.

At the Denver Mint several improvements and economies have been effected. The superintendent has, by changes in the personnel of the force, been able to abolish some positions and to consolidate others.

In the refinery changes have been made to eliminate fumes, which have always been troublesome—in fact, at times have been so bad that it was almost impossible for the men to stand them. Since the removal of the hood from the gold cells and other changes in the system there have been no fumes in the room.

Changes in mechanical devices used in the sweep cellar and the substitution of oil for steam as a drier have greatly increased the efficiency of this branch of the institution.

Two automatic weighing machines are being built in the machine shop and are nearing completion. As these machines are being constructed by men in the shops in their spare time not taken up with regular work, their greatest cost will be material used in their construction.

ASSAY DEPARTMENT.

The operations of this department during the fiscal year 1915 were as follows:

Melts and samples operated on.

Items.	Gold.	Silver.	Total.
Deposits	3,827	1,017	4,844
Redeposits	1,270		1,270

OPERATIONS OF THE COINING DEPARTMENT FOR THE FISCAL YEAR 1915.

From August 1, 1914, to the close of the fiscal year the coining department operated upon gold, silver, nickel, and bronze in the following amounts: 573,900.975 fine ounces gold, producing 280,091.250 fine ounces of coin, valued at $5,790,000; 969,140.52 fine ounces of silver, producing 639,214.10 fine ounces of coin, having a value of $883,900; 2,459,553.90 troy ounces nickel, producing 1,729,951.85 troy ounces of coin, having a value of $538,225; and 1,951,481 troy ounces bronze, from which were produced 1,451,073.70 troy ounces of coin, valued at $145,070.

The attached tabulated statement shows in detail the receipts and deliveries, the wastage and surplus in operations, and the percentage of coin to the amount operated upon. The low per cent of gold coin is due to the fact that in operating upon quarter eagles the blanks were sent directly to the coining presses, no attempt having been made to adjust them.

Receipts and deliveries by the superintendent of the coining department for the fiscal year 1915.

Per cent of coin to amount operated upon	41.06			

During the year 57,241 visitors witnessed the coining operations from the balconies.

On June 30 there were 95 officers and employees of this mint, divided as follows among the departments: General, 42; assay, 7; coining, 22; melting and refining, 24.

UNITED STATES ASSAY OFFICE AT NEW YORK.

The unusual conditions existing in the financial world, as a result largely of the European war, and to a lesser extent the unsettled conditions in Mexico, have taxed the capacity of the assay office and refinery to the utmost. The conditions of operation, owing to the lack of room and the limited number of men available to handle the largely increased business, have been far from satisfactory. The proposed new building, for which the appropriation is now made and the plans practically completed, promises relief from these conditions imposed by lack of room. During the year the old building, which has stood on Wall Street for the past 82 years, has been removed, and it is hoped that the new building will be rushed to completion as soon as possible. This, however, will increase rather than diminish the necessity of additional employees. There has been the best possible cooperation between all departments and between their employees, and entire willingness on the part of the clerks and other employees to respond to any calls for extra labor of a different sort from what they are supposed to do. While this is a fine thing in itself, there is a limit to which it can be relied upon to secure the efficient performance of work which properly calls for a larger force. Another year of increased business, such as now seems to be in prospect, will bring us close to that limit.

During the year this office received 15,122 deposits, which contained 8,050,857.28 gross ounces. In addition the office received from the United States Mint at Denver, on transfer, gold bars weighing 2,187,358.472 fine ounces, valued at $45,216,712.60.

The total revenue of this office during the fiscal year 1914–15, including by-products recovered and on hand (approximating $85,000 in value), amounted to $251,277, as against the total of appropriations for all purposes, including salaries, wages, and contingent expenses, of $191,100. All of the appropriation was not expended, but the exact amount to be turned back can not be exactly determined at this date, as some accounts are still outstanding.

On this showing of revenue on the year's operation of approximately $50,277 in excess of expenditures, it is felt that Congress would be well justified in granting the increase to the force of employees for which estimates have been made.

During the year 139,120.601 fine ounces of gold and 605,842.25 fine ounces of silver were transferred to the mint at Philadelphia.

Gold bars were issued to depositors for domestic use in payment for bullion for $4,303,568.03, and gold bars were exchanged for gold coin for domestic use in the arts, etc., for $24,193,576.57, showing a total decrease of $6,457,109.42.

Gold bars were exchanged for gold coin for export for $11,019,766.77, showing a decrease of $18,058,876.71.

The charges collected on gold bars exchanged for gold coin amounted to $16,507.12.

RECEIPTS AND DELIVERIES BY THE SUPERINTENDENT OF THE MELTING AND REFINING DEPARTMENT.

Platinum	1,558.10	$62,324.00		
Palladium	286.65	11,466.00		
Iridium	102.00	5,100.00		

Silver bullion sent to the refinery upon which refining charges were collected contained, by assay, 3,313,941.84 fine ounces, and silver owned by the Government returned to refinery for parting purposes upon which no parting charge was collected contained, by assay, 213,976.21 fine ounces. All copper recovered during the year is unrefined and in the form of settlement bars and slabs.

ASSAYER'S DEPARTMENT.

During the fiscal year 1915 the operations of the department, as shown by the tabulated statement below, have been in such volume that it has taxed our resources to the utmost to keep up with the current work; 127,646 assays were made upon 44,368 samples, divided as follows:

Items.	Samples.	Assays.	Reports.
Deposits	35,200	101,904	14,791
Redeposits	1,612	4,122	773
Fine silver purchase	284	454	142
Refinery	5,793	14,762	2,410
Specials	1,183	5,526	580
Mint Bureau and sundry	296	878	193

The deposits and redeposits represent 14,892 melts of gold and silver; the refinery samples, 287 melts of fine gold and 669 melts of fine silver; 330 melts of gold anodes and 917 melts of silver anodes, the remainder being settlement melts and miscellaneous refinery samples.

The specials represent articles of jewelry, manufacturers' samples, etc., deposited for the accurate determination of fineness, a number being used in legal actions relative to the enforcement of statutes governing the stamping of karat fineness. Some were umpire assays controlling the purchase or sale of bullion between private parties. Sweep, by-product, and Mint Bureau assays make up the others. The average cost per assay, including overhead charges, was $0.30. About 110,000 cupels were made, and the silver disks used in parting were rolled and cut to the required weight.

The fineness was stamped upon all the fine gold and silver bars manufactured, and the necessary computations for checking the gold and silver values and charges on all deposits were made in the department.

The constant increase in the work necessary in the department without increase in the force has brought about conditions where it is nearly always performed under pressure, and any absence due to sickness or leave makes it more and more difficult to maintain the high standard of accuracy and prompt dispatch of the business, which has been the aim. The work performed shows a steady growth, amounting to 25 per cent in the last four years, without any increase in the force for performing it.

The number of officers and employees at this assay office at the close of the fiscal year 1915 was as follows:

General	47
Assay	15
Melting and refining	27
Total	89

[1] Includes freight on bullion.

OPERATIONS OF THE MELTER AND REFINERS AND THE COINERS, FISCAL YEAR 1915.

The quantity of metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1915 aggregated 17,261,446 fine ounces of gold and 27,564,311 fine ounces of silver. There were also operated upon at the coinage mints 51,196,344 ounces of minor coinage metal. The figures in the table following are the actual figures as obtained at the settlements of the accounts:

GOLD.

Legal limits of wastage, on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, is as follows: Melter and refiner—Gold, 0.001; silver, 0.0015. Coiner—Gold, 0.0005; silver, 0.001.

WASTAGE AND LOSS ON SALE OF SWEEPS, 1915.

The value of the precious metals wasted in the metallurgical and mechanical department was $3,830.72. A loss of $3,955.02 occurred from difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as described in the following table:

Wastage by departments.	Mint at—			Assay office at New York.	Total.
	Philadelphia.	San Francisco.	Denver.		
Gold wastage:					
Melting and refining department					
Coining department	$395.39	$312.91			$708.30
Silver wastage:					
Melting and refining department			$805.86	$758.64	1,564.50
Coining department	252.77	47.67	185.13		485.57
Nickel wastage:					
Melting and refining department	452.56	24.80	63.91		541.27
Coining department	146.96	9.60	25.10		181.66
Bronze wastage:					
Melting and refining department	100.97	48.99	133.55		283.51
Coining department	22.48	4.87	38.56		65.91
Gold loss on sale of sweeps:					
Melting and refining department	379.66	559.38	799.55	1,785.47	3,524.06
Coining department	40.71				40.71
Silver loss on sale of sweeps:					
Melting and refining department	113.79	37.56	45.61	185.19	382.15
Coining department	8.10				8.10
Total wastage and loss	1,913.39	1,045.78	2,097.27	2,729.30	7,785.74
Reimbursement, wastage:					
From contingent appropriation	648.16	360.58	990.99	758.64	2,758.37

LABORATORY OF THE BUREAU OF THE MINT.

From the coinage of the calendar year 1914 the assayer of this bureau tested 270 gold and 266 silver coins, all of which were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation in fineness above standard (the legal limit being 1 above or below) was 0.5, while the greatest deviation below was 0.5.

The greatest deviation in fineness of silver coins above standard (the limit being 3 above or below) was 1.3, while the greatest deviation below was 1.7.

The following table and statement summarizes these assays:

Fineness.	Philadelphia.		San Francisco.		Denver.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.3						1		1
.5						1		1

Average fineness	899.997	899.937	899.855	900.091	899.942	899.714	899.910	899.906

Samples representing certificate bars made at the various offices have been forwarded to the bureau for test assaying and in general every fifth melt has been tested. During the year the examination of minor coins was inaugurated and 1,034 nickels and 63 cents were examined. Sixteen Philippine coins were examined and all of them found within the legal requirements.

PROCEEDINGS OF THE ASSAY COMMISSION, 1915.

The following-named gentlemen were designated by the President as commissioners to examine and test the weight and fineness of the coins reserved at the several mints during the calendar year 1914, pursuant to the provisions of section 3547 of the Revised Statutes of the United States:

1. Maj. Wm. O. Owen, United States Army (retired), 2719 Ontario Road, Washington, D. C.

2. Hon. Wm. A. Ashbrook, ranking member of Committee on Coinage, Weights, and Measures, House of Representatives. (Member of commission in 1908 and 1910.)

3. James A. Bryan, Newbern, N. C.
4. Wm. L. Saunders, Plainfield, N. J.
5. John L. McNeil, Durango, Colo.
6. Hugh Dougherty, Indianapolis, Ind.
7. Prof. Charles W. Kent, University of Virginia.
8. Hugo C. Rothert, Huntingburg, Ind.
9. A. W. Kopp, Platteville, Wis. (Former Member of Congress.)
10. Prof. O. M. W. Sprague, Harvard University.
11. L. A. Fischer, physicist, Bureau of Standards, Washington, D. C. (Member commission 1905, 1911, 1913, 1914.)
12. Leonard P. Morgan, Philadelphia, Pa. (Member commission 1914.)
13. R. S. Hawes, St. Louis, Mo.
14. Dr. Owen L. Shinn, University of Pennsylvania. (Member commission 1907, 1910, 1911, 1912, 1913, and 1914.)
15. Hon. H. C. Groff, Victor, Mont.
16. Hon. Kenyon B. Conger, Irvington, N. Y.

The commission met at the mint at Philadelphia, Wednesday, February 10, 1915, and Hon. Wm. A. Ashbrook was elected chairman.

The following committees were appointed by the chairman with the approval of the commission:

Committee on counting.—Mr. John L. McNeil, chairman, Messrs. Hawes, Kopp, and Rothert.

Committee on weighing.—Mr. Kenyon B. Conger, chairman; Messrs. Dougherty, Fischer, and Morgan.

Committee on assaying.—Dr. Owen Louis Shinn, chairman; Messrs. Comings, Groff, Kent, and Owen.

Mr. Fischer suggested that a committee on resolutions be appointed by the chair, and Mr. Ashbrook appointed the following:

Committee on resolutions.—Hon. A. W. Kopp, chairman; Messrs. Dougherty and Groff.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia. That the packages delivered were compared with the transcripts kept by the Director of the Mint, and the number of each delivery and the pieces contained in the packages were found to be correct. After verification of the packages the coins were delivered to the committee on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Mints.	Gold.		Silver.	
	Pieces.	Value.	Pieces.	Value.
Philadelphia	747	$5,430	11,873	$1,682.50
San Francisco	1,969	33,355	1,678	386.00
Denver	1,494	14,895	7,480	976.60
Total United States	4,210	53,680	21,031	3,045.10
San Francisco, Philippine coinage			989	69.40
Total	4,210	53,680	22,020	3,114.50

The committee on weighing reported that they had examined sample coins selected at random from those reserved by the several mints. The weighing was done on a balance made by Henry Troemner, of Philadelphia. The weights employed were furnished by the Director of the Bureau of Standards, and were accompanied by a cetrificate stating their variation in mass from the standards fixed by law. The balance was carefully tested and found to be sufficiently accurate without making corrections.

Certain of the working standards of the mint, selected at random, were intercompared, with the following results:

500 ounces = 400 ounces + 100 ounces + 0.0014 ounce; 300 ounces = 200 ounces + 100 ounces − 0.0000; 200 ounces = 100 ounces + 50 ounces + 30 ounces + 20 ounces + 0.0001 ounce; 100 ounces = 50 ounces + 30 ounces + 20 ounces + 0.0003 ounce. The 2 ounces + 10 ounces were found equal to the standard troy pound to within 3 parts in 100,000; and the working standards of the Philadelphia Mint agreed with the standard troy pound to within 4 parts in 100,000; the 20-centavo and 10-centavo weights used in testing Philippine coins were carefully checked against a set of metric weights which had been verified by the Bureau of Standards and found to be in satisfactory adjustment.

The committee on assaying reported: In compliance with section 3547 of the Revised Statutes, receiving and making assays of the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver for assay.

The results of the assays made of the individual coins and of the same in mass are given in the following schedules. From these it will be seen that—

The highest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	900.2
San Francisco	900.4
Denver	900.2

The lowest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	899.6
San Francisco	899.6
Denver	899.8

The highest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	901.1
San Francisco	900.4
Denver	900.2

The lowest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	898.9
San Francisco	899.1
Denver	898.6

The highest assay value of the Philippine silver coinage is at—

San Francisco (subsidiary)	750.0

The lowest assay value of the Philippine silver coinage is at—

San Francisco (subsidiary)	749.0

The committee has tested the quartation silver and found it to be, for assay purposes, free from gold, and the lead used in the assay of

gold bullion to be free from gold and silver. The acid used in the humid assay of silver was found to be free from chlorine.

The balances used were tested and found to be correct.

The committee therefore deem the assays to be entirely trustworthy.

The following report submitted by the committee on resolutions was unanimously adopted:

Whereas the Annual Assay Commission, appointed by the President of the United States to examine and test the weight and fineness of the gold and silver coins reserved by the different mints of the United States, has held its meeting in the city of Philadelphia on February 10 and 11, 1915; and

Whereas the commission has about completed its labors, the committee on resolutions begs leave to offer the following resolutions:

First. That the commission renews the recommendation of prior commissions with reference to the maintenance and increase of the national coin collection of the mint at Philadelphia.

Second. That in the opinion of the commission, in order to facilitate this work, an official souvenir mint medal, of typical and characteristic design, should be struck off and a descriptive booklet of the mint published to be sold at a moderate price to visitors at the mint; that the proceeds from such sales be devoted exclusively, under the supervision of the Secretary of the Treasury, to the extension of this national collection of coins and medals at the Philadelphia Mint, as aforesaid.

Third. That in the opinion of the commission there should be an annual appropriation by Congress of $2,000 for the purpose of extending this collection, as aforesaid.

Fourth. That a letter be written under the hand of the chairman and secretary of this commission to the Secretary of the Treasury recommending to him that the above amount be included in the annual estimates for the purposes aforesaid and further suggesting that he recommend to Congress the desirability of authorizing the mint medal and descriptive booklet referred to herein; and be it further

Resolved, That the thanks of the commission be, and they are hereby, heartily tendered to Hon. William P. Malburn, Assistant Secretary of the Treasury; Hon. F. P. Dewey, Acting Director of the Mint; Mr. Leonard P. Morgan, secretary of the commission; to Mrs. Virginia Carpenter, and to various other officials and employees of the mint for the uniform courtesy shown the commission during its session.

Respectfully submitted.

A. W. Kopp, *Chairman*.
Hugh Dougherty.
H. C. Groff.

MOVEMENT OF GOLD FROM THE PORT OF NEW YORK.

The superintendent of the United States assay office at New York has prepared the following table, giving exports of gold through the port of New York:

Statement of United States gold coin and gold bullion exported from the port of New York to Europe during the fiscal year ended June 30, 1915.

[1] Includes gold, silver, and other coin.
[2] "Specie" includes subsidiary coin in banks.
[3] Estimates for the United Kingdom prior to 1910 were for coin only; these figures include $100,000,000 for bullion in banks.
[4] Based on estimate of active rupee circulation by Accountant General of India in 1908.
[5] Includes Straits Settlements, Malay States, and Johore.
[6] Based upon a calculation by Messrs. P. Arminjon and B. Michel in 1908, who then estimated the stock of gold at 33,000,000 to 41,000,000 Egyptian pounds. The mean of these figures was adopted. Since then the net imports of Egypt, by customs records, have been $50,000,000, but the 1908 estimate has been changed only to the extent of the increase in bank holdings. It does not seem probable that Egypt can have absorbed the amount of gold indicated by the customs records.
[7] Estimate of A. De Foville, 1909. Silver for 1912 repeated for 1913.
[8] The figures for the stock of gold in Germany are based upon an estimate by Dr. Arnold, a director of the Reichsbank, of 3,000,000,000 marks in German coin in the country at the end of 1910. At the close of 1913 the Reichsbank held $114,873,080 in bullion and foreign coin.

NOTE.—The blank spaces in this table signify that no satisfactory information is available. The data shown above has been gathered from various reliable sources, is by the means complete or satisfactory, but is the best obtainable at this time. In some instances the amount of gold in banks and public treasuries is carried out as the total stock in one country, although an unknown amount is in circulation. The case of Italy is an example of this. The per capita circulation is based upon known amounts only. All estimates for stock of money in circulation must be accepted with reserve.

VALUES OF FOREIGN COINS.

The following values calculated by the Director of the Mint were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1915.

Values of foreign coins.

Country.	Legal standard.	Monetary unit.	Value in terms of U. S. money.	Remarks.[1]
Argentine Republic	Gold	Peso	$0.9648	Currency: Depreciated paper, convertible at 44 per cent of face value.
Austria-Hungary	do	Crown	.2026	
Belgium	Gold and silver	Franc	.1930	Member of Latin Union; gold is the actual standard.
Bolivia	Gold	Boliviano	.3893	12½ bolivianos equal 1 pound sterling.
Brazil	do	Milreis	.5462	Currency: Government paper. Exchange rate about 25 cents to the milreis.
British Colonies in Australasia and Africa.	do	Pound sterling	4.8665	
Canada	do	Dollar	1.0000	
Central American States:				
Costa Rica	do	Colon	.4653	
British Honduras	do	Dollar	1.0000	
Nicaragua	do	Cordoba	1.0000	
Guatemala, Honduras, Salvador	Silver	Peso	.3537	Guatemala: Currency, inconvertible paper, exchange rate about 40 pesos = $1. Honduras; Currency, bank notes. Salvador: Currency, convertible into silver on demand.
Chile	Gold	do	.3650	Currency: Inconvertible paper; exchange rate, approximately, $0.14.
China	Silver	Tael—Amoy	.5798	
		Tael—Canton	.5780	
		Tael—Cheefoo	.5545	
		Tael—Chin Kiang	.5664	
		Tael—Fuchau	.5363	
		Tael—Haikwan (Customs)	.5899	
		Tael—Hankow	.5425	
		Tael—Kiaochow	.5618	
		Tael—Nankin	.5737	
		Tael—Ninchwang	.5437	
		Tael—Ningpo	.5574	
		Tael—Peking	.5652	
		Tael—Shanghai	.5296	
		Tael—Swatow	.5356	
		Tael—Takau	.5835	
		Tael—Tientsin	.5618	
		Dollar—Yuan	.3799	
		Dollar—Hongkong	.3813	
		Dollar—British	.3813	
		Dollar—Mexican	.3841	
Colombia	Gold	Dollar	1.0000	Currency: Inconvertible paper; exchange rate, approximately $1.05 paper to $1 gold.
Denmark	do	Crown	.2680	
Ecuador	do	Sucre	.4867	
Egypt	do	Pound (100 piasters).	4.9431	The actual standard is the British pound sterling, which is legal tender for 97½ piasters.
Finland	do	Mark	.1930	
France	Gold and silver	Franc	.1930	Member of Latin Union; gold is the actual standard.
German Empire	Gold	Mark	.2382	
Great Britain	do	Pound sterling	4.8665	
Greece	Gold and silver	Drachma	.1930	Do.
Haiti	Gold	Gourde	.9647	Currency; Inconvertible paper; exchange rate, approximtaely, 68.10.

[1] The exchange rates shown under this heading are recent quotations and given as an indication of the values of currencies which are fluctuating in their relation to the legal standard. They are not to take the place of the consular certificate where it is available.

Values of fareign coins—Continued.

Country.	Legal standard.	Monetary unit.	Value in terms of U. S. money.	Remarks.
India [British]	Gold	Rupee	$.3244	(15 rupees equal 1 pound sterling).
Italy	Gold and silver	Lira	.1930	Member of Latin Union; gold is the actual standard.
Japan	Gold	Yen	.4985	
Liberia	do	Dollar	1.0000	Currency: Depreciated silver token coins. Customs duties are collected in gold.
Mexico	do	Peso	.4985	Mexican exchange rate violently fluctuating approximately, $0.15.
Netherlands	do	Florin	.4020	
Newfoundland	do	Dollar	1.0139	
Norway	do	Crown	.2680	
Panama	do	Balboa	1.0000	
Paraguay	Silver	Peso	.3537	Currency: Depreciated paper, exchange rate 1,550 per cent.
Persia	Gold and silver	Kran	.1700	This is the value of the gold kran. Currency is silver circulating above its metallic value; exchange value of silver kran, approximately, $0.0875.
Peru	Gold	Libra	4.8665	
Philippine Islands	do	Peso	.5000	
Portugal	do	Escudo	1.0806	Currency: Inconvertible paper; exchange rate approximately, $0.70½.
Roumania	do	Leu	.1930	
Russia	do	Ruble	.5146	
Santo Domingo	do	Dollar	1.0000	
Servia	do	Dinar	.1930	
Siam	do	Tical	.3709	
Spain	Gold and silver	Peseta	.1930	Valuation is for the gold peseta; currency is silver circulating above its metallic value; exchange value, approximately, $0.20.
Straits Settlements	Gold	Dollar	.5678	
Sweden	do	Crown	.2680	
Switzerland	do	Franc	.1930	Member of Latin Union; gold is the actual standard.
Turkey	do	Piaster	.0440	100 piasters equal to the Turkish £.
Uruguay	do	Peso	1.0342	
Venezuela	do	Bolivar	.1930

MONETARY LEGISLATION.

[PUBLIC—NO. 233—63D CONGRESS.]

[S. 6039.]

An Act For the coinage of certain gold and silver coins in commemoration of the Panama-Pacific International Exposition, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury shall cause to be coined at the United States mint at San Francisco not exceeding three thousand gold coins of the denomination of $50 each, ten thousand gold coins of the denomination of $2.50 each, twenty-five thousand gold coins of the denomination of $1 each, and not exceeding two hundred thousand silver coins of the denomination of 50 cents each, all of legal weight and fineness; said coins to be struck in commemoration of the Panama-Pacific International Exposition. The words, devices, and designs upon said coins shall be determined and prescribed by the Secretary of the Treasury, and all provisions of law relative to the coinage and legal-tender value of all other gold and silver coins shall be applicable to the coins issued under and in accordance with the provisions of this act; and one-half of the issue of $50 gold coins herein authorized shall be similar in shape to the octagonal $50 gold pieces issued in California in eighteen hundred and fifty-one; and the entire issue of said $50, $2.50, and $1 coins herein authorized shall be sold and delivered by the Secretary of the Treasury to the Panama-Pacific International Exposition Company at par, under rules and regulations and in amounts to be prescribed by him. The coinage shall be executed as soon as may be, and the delivery of said coins to begin not later than the day of the opening of the exposition. Said 50-cent coins herein authorized shall be issued only upon the request of the Panama-Pacific International Exposition Company, and shall be delivered to it by the Secretary of the Treasury at par during the period when said Panama-Pacific International Exposition shall be officially open.

SEC. 2. That medals and diplomas, with appropriate devices, emblems, and inscriptions commemorative of said Panama-Pacific International Exposition and of the awards to be made to the exhibitors thereat, shall be prepared by the Secretary of the Treasury at the United States mint at Philadelphia and the Bureau of Engraving and Printing, said medals and diplomas to be delivered to said Panama-Pacific International Exposition Company subject to the provisions of section fifty-two of the coinage act of eighteen hundred and seventy-three and upon payment of the cost of the material composing said medals or diplomas.

SEC. 3. That the 50-cent silver coins herein authorized may, in the discretion of the Secretary of the Treasury, be coined or finished and issued from the machinery to be installed as a part of the exhibit of the United States mint at said exposition and for the purpose of maintaining the exhibit as an educative working exhibit at all times the coins so minted may be remelted and reminted. All of said 50-cent silver coins herein authorized not issued to and at the request of said Panama-Pacific International Exposition, whether the same are coined as a part of said working exhibit or coined at the mint in San Francisco, shall be remelted upon the official closing of said exposition. All provisions hereof in regard to the coinage, finishing, or issue of said 50-cent silver coins from machinery installed as a part of the said exhibit shall be coined, finished, and issued under such regulations as the Secretary of the Treasury may prescribe; and the Secretary of the Treasury shall cause to be prepared a suitable souvenir medal (of such metal or composition of metals as he may prescribe), to be struck off by machinery in said mint exhibit, and all of said medals shall be delivered to said Panama-Pacific International Exposition Company upon payment of the cost of the material composing the same, and all other souvenirs which may be coined, stamped, printed, or otherwise issued from any portion of the United States Government exhibit shall be delivered to said exposition company upon payment of the cost of the material composing said souvenirs, and said souvenir medals and other souvenirs shall be delivered to said Panama-Pacific International Exposition Company subject to such regulations as to disposition thereof as the Government exhibit board may prescribe. All provisions,

whether penal or otherwise, of the laws prohibiting the counterfeiting or imitating of coins or securities of the United States shall apply to the medals, diplomas, and souvenirs provided for under sections two and three of this act.

SEC 4. That the Secretary of the Treasury is hereby authorized to obtain suitable designs for the coins and medals herein authorized, and the sum of $5,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to defray the cost of said designs: *Provided*, That the Panama-Pacific International Exposition Company shall reimburse the Treasury Department for the amount thus expended.

Approved, January 16, 1915.

The following table gives the weight and fineness of the coins authorized in the above act:

Denomination.	Fineness.	Pure gold or silver.	Alloy.	Weight.	Amount authorized.
	Thousandths.	*Grains.*	*Grains.*	*Grains.*	*Pieces.*
Gold:					
$50 pieces	900	1,161.00	129.00	1,290.00	3,000
$2½ pieces	900	58.05	6.45	64.50	10,000
$1 pieces	900	23.22	2.58	25.80	25,000
Silver: 50-cent pieces	900	173.61	19.29	192.90	200,000

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and Government notes, both covered and uncovered, of the different foreign countries, published annually in the reports of this bureau, are obtained directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of the interrogatories covering the points on which information is sought from the Governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint. Receipts of replies to the interrogatories have been limited or delayed in transmission, so that those that appear in this report are only such as were received up to the time arranged by Congress for the delivery of manuscript of Government documents to the Public Printer. Section 9 of the sundry civil act, approved August 1, 1914, provides as follows:

> Appropriations herein for printing and binding shall not be used for any annual report or the accompanying documents unless the head of each executive department, or other branch of the public service, or the Commissioners of the District of Columbia making such a report shall furnish copy to the Public Printer in the following manner. Copies of the documents accompanying such annual reports on or before the 15th day of October of each year; copies of the annual reports on or before the 15th day of November of each year; and complete revised proofs of the accompanying documents and the annual reports on the 10th and 20th days of November of each year, respectively. * * *

Following is a copy of the list of the interrogatories forwarded to foreign Governments for the year 1914:

1. What was the amount of gold and silver coinage during the calendar year 1914, new coinage, and domestic and foreign recoinage?
2. (*a*) Was any coinage executed at your mint for other Governments during the year 1914? If so, state character and amount of same.
2. (*b*) Was any coinage executed at foreign mints for your Government? If so, state character and amount of same.
3. What was the estimated weight of fine gold and silver used in the industrial arts during the calendar year 1914?
4. What amount of gold and silver in the form of old plate, jewelry, and other old material was returned from use in the industrial arts to monetary use by being deposited at the mint for coinage?
5. What was the total import of United States gold coin and what amount was deposited and melted at the mints during the year 1914?
6. What was the weight, expressed in kilograms fine, and the value of the gold and silver produced from the mines of the country during the calendar year 1914? Give the product of the colonies of the country, naming them separately.
7. What, approximately, was the stock of gold and silver coin and bullion in the country on December 31, 1914? Give stock in public treasuries and banks, and in circulation, separately.
8. What was the amount of Government and bank notes outstanding at the end of the year 1914, and what amount was not covered by gold coin and bullion and legal-tender silver coin held for their redemption?
9. Is gold at a premium as compared with the actual currency of the country? If so, what is the actual currency?
10. Were any laws passed during the year 1914 affecting the coinage, currency, or banking? If so, please forward copies of the same.

11. Is there a report published on the operations of the mint? If so, please forward a copy, also a report of the department of mines.

12. (*a*) What was the import and export of gold during the calendar year 1914, the value of coin, bullion, and ore, to be given separately and by countries?

12. (*b*) What was the import and export of silver during the calendar year 1914, the the value of coin, bullion, and ore to be given separately and by countries?

13. Please examine the appended description of the coins of your country, bringing it down to date with corrections.

NORTH AMERICA.

CANADA.

Answers to interrogatories, 1914.

1. Gold and silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
Gold:		
Sovereigns	14,891	$72,467.05
10 dollars	135,403	1,354,030.00
5 dollars	29,109	145,545.00
Total	179,403	[1] 1,572,042.05
Silver:		
50 cents	157,537	78,768.50
25 cents	1,202,322	300,580.50
10 cents	2,543,616	254,361.60
5 cents	4,190,669	209,533.45
Total	8,094,144	843,244.05

[1] Of which amount $1,568,416.69 was new coinage and $3,625.36 was recoinage of domestic coins.

2. (*a* and *b*), 5 and 9. None.

(For replies to Nos. 3 and 6, see appendix to this report.)

4. Gold and silver in the form of old plate, jewelry, and other old material returned from use in the industrial arts to monetary use, deposited at the mint for coinage:

Classification.	Fine ounces.	Value.
Gold	3,266.148	$67,517.16
Silver	972.48	537.90

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.
Gold coin	$94,305,294.44	[1] $43,245,583
Gold bullion	320,344.71	.....
Silver coin	220,721.80	.....

[1] Gold and silver coin.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	$162,395,231.79	$94,305,294.44	(1)
Banks of issue	105,969,755.00	.....	
Total	268,364,986.79	94,305,294.44	.....

[1] No notes are issued against a silver reserve.

10. Laws passed during the year 1914: Finance act August 22, 1914; Dominion notes act August 22, 1914, annexed hereto.

11. The Annual Report of the Deputy Master of the Mint, London, includes the report of the deputy master, Ottawa.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.				Silver.		
	Imports.		Exports.		Imports—bullion.	Exports.	
	Coin.	Bullion.	Coin.	(1)		Coin.	(2)
United Kingdom	$2,607	$7	$3,020,345	$105,224	$43	$1,135	$12,125,124
United States	117,697,107	14,530,326	15,432,736	15,132,495	629,236	1,147,240	5,406,506

5 George V, Chapter 3.

An act to conserve the commercial and financial interests of Canada. (Assented to Aug. 22, 1914.)

Whereas, for the purposes set forth in an order in council of the 3d day of August, 1914, advances to the chartered banks in the form of an issue of Dominion notes were authorized to be made against deposits by the banks with the minister of finance of such securities as might be approved by the minister, such advances to be repayable not later than the 1st day of May, 1915, with interest at a rate, to be approved by the minister, not less than 5 per cent per annum; and whereas under the authority of an order in council of the same date the chartered banks were authorized to make payment in bank notes instead of gold or Dominion notes until further official announcement in that behalf, and were also authorized to issue from the date of the said order in council, and until further announcement excess circulation to amounts not exceeding 15 per cent of the combined unimpaired capital and rest or reserve fund of the respective banks, as stated in their respective statutory monthly returns to the minister for the month immediately preceding that in which the additional amount is issued; and whereas under authority of an order in council dated the 10th day of August, A. D. 1914, the redeeming in specie of Dominion notes was suspended; and whereas it is expedient that the said orders in council be confirmed: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

1. This act may be cited as the finance act, 1914.

2. In this act, unless the context otherwise requires—

(*a*) "Minister" means the minister of finance; (*b*) "excess circulation" means the amount of the notes of a bank in circulation in excess of the amount of the notes of that bank which may be issued pursuant to subsections 1 and 3 of section 61 of the bank act.

3. The issue of Dominion notes, and all things done under the provisions of the orders in council cited in the preamble, are hereby confirmed and shall be deemed to have been duly authorized, and the said orders in council shall continue in force until the 15th day of September, 1914: *Provided always*, That the governor in council may at any time by a proclamation published in the Canada Gazette revoke the said orders in council, or any of them, or any of the provisions in the said orders contained, but such revocation shall not affect the previous operation of any such order or anything duly done thereunder, or affect any right, privilege, obligation, or liability acquired, accrued, accruing, or incurred thereunder.

4. In case of war, invasion, riot, or insurrection, real or apprehended, and in case of any real or apprehended financial crisis, the governor in council may, by proclamation published in the Canada Gazette—

(*a*) Authorize the making of advances to the chartered banks and to the savings banks to which the Quebec savings banks act, 1913, applies, by the issue of Dominion notes upon the pledge of securities, deposited with the minister, of such kind and amount as may be approved by the treasury board; such advances to be repayable at such times as the board may determine with interest at a rate likewise determined by the board of not less than 5 per cent per annum.

(*b*) Authorize the chartered banks to make payments in the bank notes issued by such banks instead of in gold or Dominion notes, but the total amount of the notes of any chartered bank in circulation at any time shall not exceed the amount of its notes issuable under the provisions of the bank act and of clause (*c*) of this subsection.

(*c*) Authorize the several chartered banks to issue excess circulation, from and including the first day of March in any year, to and including the last day of August next ensuing, or during any part of such period, to amounts not exceeding 15 per cent of the combined unimpaired capital and rest or reserve fund of the respective banks, as stated in their respective statutory monthly returns to the minister for the month immediately preceding that in which the additional amount is issued.

(*d*) Suspend the redemption in gold of Dominion notes.

(*e*) Authorize, in so far as the same may be within the legislative authority of the Parliament of Canada, the postponement of the payment of all or any debts, liabilities, and obligations however arising, to such extent, for such time, and upon and subject to such terms, conditions, limitations, and provisions as may be specified in the proclamation.

(2) The securities deposited with the minister under this section shall, as respects the Dominion notes issued hereunder, be deemed to be the security required to be held by the minister under section 5 of the Dominion notes act, 1914.

(3) A tender by a bank of its notes in payment of any of its liabilities, when a proclamation made under clause (*b*) of the first subsection of this section is in force, shall be a sufficient and valid tender, and the payment at such time by a bank of any of its liabilities with its notes shall be as sufficient and valid a payment as if the same had been made in specie or Dominion notes; provided in either case the total amount of the notes of the bank in circulation at that time, including in case of tender the amount tendered, does not exceed the amount of notes of the bank issuable under the provisions of the bank act and of clause (*c*) of said subsection.

(4) Subsection 16 of section 61 of the bank act shall apply to the excess circulation issued under the authority of this section, and interest shall accordingly be payable thereon as if such excess circulation had been excess circulation issued under the authority of said section 61.

(5) No proclamation issued under the provisions of this section shall continue in force for more than 30 days after the beginning of the first session of Parliament held after the issue thereof, unless it is approved by resolution passed by both Houses of Parliament.

(6) Any proclamation made under the provisions of this section may be varied, extended, or revoked by any subsequent proclamation, and separate proclamations may be made dealing with separate subjects; but if any proclamation is varied, extended, or revoked neither the previous operation thereof nor anything duly done thereunder shall be affected thereby, nor shall any right, privilege, obligation, or liability acquired, accrued, accruing, or incurred thereunder be affected by such variation, extension, or revocation.

5. The governor in council may make regulations, not inconsistent with this act, with regard to advances to the chartered banks, and to the said savings banks, the terms and conditions affecting the deposit of securities, and all other matters necessary to give effect to the provisions of this act.

6. The part of section 135 of the bank act immediately preceding clause (*a*) is repealed and the following is substituted therefor:

"135. If the total amount of the notes of the banks in circulation at any time exceeds the amount authorized by this act and by the finance act of 1914, the bank shall—"

5 GEORGE V. CHAP. 4.

An act respecting Dominion notes. (Assented to 22d of August, 1914.)

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

SHORT TITLE.

1. This act may be cited as the Dominion notes act, 1914.

INTERPRETATION.

2. In this act, unless the context otherwise requires—

(*a*) "Dominion notes" means notes of the Dominion of Canada issued and outstanding under the authority of this act.

(*d*) "Gold" means—(*i*) gold coins which are a legal tender in Canada, and, (*ii*) gold bullion in bars, each bar bearing either the stamp of the Royal Mint of the United

Kingdom or of the branch thereof in Canada, or of one of the branches thereof in Australia, or of one of the coinage mints of the United States, or of the assay office of the United States at New York, certifying its weight and fineness, at a valuation of $1 in the currency of Canada for every 23.22 grains of fine gold content.

(c) "Minister" means the minister of finance.

ISSUE AND REDEMPTION.

3. Dominion notes may be issued and outstanding at any time to any amount, and such notes shall be a legal tender in every part of Canada, except at the offices at which they are redeemable.

4. Dominion notes shall be of such denominational values as the governor in council determines, and shall be in such form, and signed by such persons, two in number, as the minister directs.

2. By direction of the minister, there may be substituted for signatures in the proper handwriting of one or both of the persons authorized to sign under the provisions of the last preceding subsection, facsimiles thereof printed from engraving: *Provided*, That if both of the signatures are printed, then a distinguishing device and serial number shall be printed from engraving on each note, after the notes have been delivered by the printer and engraver to the minister and while the notes are in the custody and control of the officers of the department of finance.

3. Dominion notes shall be redeemable in gold on presentation at branch offices established, or at banks with which arrangements are made for the redemption thereof as hereinafter provided.

SECURITY.

5. The minister of finance shall always hold as security for the redemption of Dominion notes up to and including $50,000,000, issued and outstanding at any one time, an amount equal to not less than 25 per cent of the amount of such notes in gold.

2. As security for the redemption of Dominion notes issued in excess of $50,000,000 the minister shall hold an amount in gold equal to such excess.

6. In case the amount held in accordance with the provisions of this act as security for the redemption of Dominion notes is not sufficient to pay the Dominion notes presented for redemption, or in case the amount so held is reduced below the amount required by this act to be held, the governor in council may raise, by way of loan, temporary or otherwise, upon such form of security and upon such terms and conditions as the governor in council may approve, such sums of money as are necessary to pay such notes or to provide the amount required to be held as security for the redemption of Dominion notes issued and outstanding.

PROCEEDS AND EXPENSES.

7. The proceeds of Dominion notes so issued shall form part of the consolidated revenue fund of Canada, and all expenses incurred or required to be paid in connection with the engraving, printing, or preparation of such notes, or the signing, issue, or redemption thereof, shall be paid out of the said fund.

MONTHLY STATEMENT.

8. The minister of finance shall publish monthly in the Canada Gazette a statement of the amount of Dominion notes outstanding on the last day of the preceding month, and of the gold then held by him for securing the redemption thereof.

AGENCIES FOR REDEMPTION.

9. The governor in council may establish branch offices of the department of finance at Toronto, Montreal, Halifax, St. John, Winnepeg, Victoria, Charlottetown, Regina, and Calgary for the redemption of Dominion notes, or may make arrangements with a chartered bank at any of the said places for the redemption thereof.

2. The governor in council shall appoint a suitable person to be in charge of the respective offices so established, and such officer shall be called an assistant receiver general, and shall be an agent for the issue and redemption of Dominion notes.

NOTES OF LATE PROVINCE OF CANADA.

10. Provincial notes under the act of the late Province of Canada, passed in the session held in the twenty-ninth and thirtieth years of Her late Majesty Queen Victoria's reign, chapter 10, entitled "An act to provide for the issue of provincial notes," shall be held to be notes of the Dominion of Canada, and shall be redeemable in gold on presentation at Toronto, Montreal, Halifax, or St. John, according as the same are respectively made payable, and shall be legal tender except at the offices at which they are respectively made payable.

11. Chapter 27 of the Revised Statutes, "An act respecting Dominion notes," is repealed.

NOVA SCOTIA.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*). There is no mint in this consular district. The Province of Nova Scotia is an integral part of the Dominion of Canada.

3, 4, 5, 9, and 10. None.

7, 8, and 12 (*a* and *b*). This information is given only for the entire Dominion.

11. A copy of the report of department of mines is forwarded herewith.

MEXICO.

AMERICAN CONSULATE,
Vera Cruz, Mexico, December 31, 1914.

Annual report on the commerce of the port of Vera Cruz, Mexico, for the calendar year 1912, as compared with that of the year 1911, compiled from Government records obtained from the customs authorities here:

Exports of gold and silver.

Country.	1911		1912	
	Gold.	Silver (bars).	Gold.	Silver (bars).
United States	$8,426,476	$9,344,775	$13,042,344	$12,683,957
France	10,071	84,090	23,455	166,590
Germany	218,744	406,759	111,853	240,422
United Kingdom	791,117	2,264,317	395,107	1,666,235
Total	9,446,408	12,099,941	13,572,759	14,757,204

In the total amount of mineral products exported from Vera Cruz the year 1912 shows a gain over 1911. This gain is represented principally in the case of the United States. Germany and France show a decrease, while the United Kingdom and the other countries have gained only under the heading of sundry mineral products. The gain of the United States is chiefly under items of gold and silver, as these precious metals continued to be sent via Vera Cruz, even though the risk of sending them by railroad to the United States had decreased in 1912. In the instance of the less valuable mineral products the apparent decrease is due in part to their having been sent by railroad to the United States.

* * * * * * *

WM. W. CANADA,
American Consul.

Exports of gold and silver from Mexico to the United States in the years 1911 and 1912.

[From Daily Consular and Trade Reports for August, 1912.]

Consular districts.	Gold.		Silver.	
	1911	1912	1911	1912
Durango [1] and Torreon	$436,294	$414,800	$1,574,210	$2,548,394
Hermosillo (gold and silver ores)	418	20,834	.....	.....
Guaymas:				
Bullion	57,906	49,787	79,330	98,458
Ore	20,548	862	5,841	29
Monterey:				
Fine bars	.....	.....	4,446,882	3,432,460
Argentiferous lead	.....	.....	4,854,455	6,858,639

[1] The exports of all metals (in 1912) show a marked increase for the year, with the single exception of gold. The figures given in the table of declared exports to the United States do not show the total extraction of metals in this consular district, as a considerable quantity of bullion is exported each year to Europe, but do accurately represent the relative importance of the several metals. Expressed roughly and in money value of bullion extracted, silver represents about 50 per cent, copper and lead each about 20 per cent, and gold about 10 per cent. Two factors have combined toward the prosperity of the past year, which were sufficient of themselves to offset the losses and damages. These were the phenomenal increase in the value of both silver and copper and the extension of the Canitas and Llano Grande branch railroads into some of the best mineral sections of the district. Thus the working of low-grade ores, which formerly did not cover the cost of extraction and transportation, has been rendered profitable and, naturally, the profits from the extraction of higher grades have been largely increased.

IMPORTS AND EXPORTS, FISCAL YEAR 1911–12.

[From Bulletin of the Pan American Union, September, 1913.]

Imports.—The principal items under the head "Gold, silver, and platinum" were: Jewelry and trinkets, $305,831, of which $126,515 was from Germany, $101,041 from France, and $17,131 from the United States; and foreign gold and silver coin, $472,873, of which $467,646 was from the United States.

Exports.—The principal gold exports in 1911–12 were: Gold ore, 1,419 kilos, worth $946,258, of which 1,417 kilos went to the United States; gold dust and bars, 35,223 kilos worth $23,481,771, of which 31,647 kilos went to the United States, 2,411 kilos to the United Kingdom, and 714 kilos to Belgium.

The principal silver exports during the same period were: Ore, 194,804 kilos worth $3,440,621, of which 193,903 kilos went to the United States; bar silver, 1,119,137 kilos worth $20,165,225, of which 812,202 kilos went to the United States and 279,938 kilos to the United Kingdom; silver combined with lead, 694,263 kilos worth $12,-451,185, of which 408,464 kilos went to the United States; 195,790 kilos to the United Kingdom, and 78,842 kilos to Belgium; silver combined with copper, 453,132 kilos worth $8,147,051, of which 427,297 kilos went to the United States and the remainder to the United Kingdom; silver cyanides, 4,707 kilos worth $86,063, of which 4,391 kilos went to the United States and the remainder to Germany; silver sulphides, 7,189 kilos worth $129,679, all to the United States.

WEST INDIES.

CUBA.

LEGATION OF THE UNITED STATES OF AMERICA,
Habana, May 17, 1915.

THE DIRECTOR OF THE MINT,
Washington, D. C.

SIR: In pursuance of a circular instruction from the Department of State, dated March 20, 1915, in regard to mint statistics in Cuba, I have the honor to report that during the year 1914 the Cuban Government did not coin any gold and silver, but a law for the coinage of a Cuban currency was passed in that year, and that at the beginning of this year this law has gone into effect and the new currency is now being issued and circulated.

The secretary of hacienda (treasury) sends the inclosed statistics for the importation and exportation of currency for the year 1914.

I am, sir, your obedient servant,

WILLIAM E. GONZALES,
American Minister.

Comparative statement of the importation and exportation of coin from the Republic of Cuba during the year 1914.

Country.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
United States	$424,000	$2,382,941	$255,000	
Spain		287,974	16,000	$776,348
France	100,016			
Canary Islands		1,000		65,000
Total	524,016	2,671,915	271,000	841,348

NOTE.—There was no gold ore exported during 1914.

PAULO TONE,
Section Chief.

LEOPOLDI CANERO,
Secretary of the Treasury.

NEW CUBAN COINS.

[From Bulletin of the Pan American Union, April, 1915.]

A complete set of the new Cuban coins, consisting of a $5 gold piece, a silver dollar, fractional silver coins of 40, 20, and 10 cents, and nickel coins of 5, 2, and 1 cent denominations, are valued at $6.78.

The chamber of commerce of Santiago has petitioned the Government to pass a law prohibiting the exportation of national gold coin, and to make the national silver money a legal tender at all customhouses in the payment of taxes on a parity with gold.

Act, approved October 26, 1914, for the coinage of Cuban currency.

ARTICLE I. The coinage of national money is hereby directed, the exclusive right thereof to rest with the State. Its basis shall be gold and the unit shall be the peso weighing 1.6718 grammes or 1.5046 fine grams.

ART. II. Money shall be coined of gold, silver, and nickel of the following denominations:

(*a*) Gold, pieces of $20, $10, $5, $4, $2, and $1.

(*b*) Silver, pieces of one peso, two-fifths of a peso, one-fifth of a peso, and one-tenth of a peso.

(*c*) Nickel, pieces of five hundredth parts of a peso, of two-hundredth parts of a peso, and of one-hundredth part of a peso.

ART. III. The gold coinage shall be unlimited. That of silver shall not exceed 2,000,000 pesos. That of nickel shall be determined by the National Executive.

ART. IV. The standards of fineness shall be:

(*a*) For gold coin: $\frac{900}{1000}$ of pure metal, with a tolerance of $\frac{1}{1000}$ both as to weight and fineness.

(*b*) For silver coin: $\frac{900}{1000}$ of pure metal, with tolerances of $\frac{2}{1000}$ for fineness and $\frac{3}{1000}$ for weight.

(*c*) Nickel coins: 250 parts nickel and 750 parts copper.

ART. V. Gold coin shall have unlimited legal tender. Silver coin shall be receivable in the proportion of 8 per cent of the amount tendered for payment and full legal tender for obligations not exceeding 10 pesos. The subsidiary nickel coins shall be legal tender for any amount not exceeding one peso.

ART. VI. Silver coins of 100 cents shall weigh 26 and 7295 $\frac{10}{1000}$ grammes; those of two-fifth of a peso shall weigh 10 grammes; those of one-fifth of a peso, 5 grammes; and those of one-tenth of a peso $2\frac{500}{1000}$ grammes. Nickel coins of $\frac{5}{100}$ of a peso shall weigh 5 grammes; and those of $1\frac{2}{100}$ of a peso, $2\frac{1}{2}$ and $3\frac{1}{2}$ grammes, respectively.

ART. VII. Every coin shall be stamped with its value, weight, and fineness, year of coinage, and the inscription "República de Cuba," and the gold coins shall bear, besides, the effigy of Martí, and on the reverse the escutcheon of the Republic. Silver and nickel coins shall have stamped on the reverse the escutcheon of the Republic and on the obverse a five-pointed star.

Gold coins of 5, 10, and 20 pesos shall be of the same shape, weight, and value as the corresponding coins of the United States of America, and those of 4, 2, and 1 peso shall be proportionate to the above in size and weight.

ART. VIII. Future coinages shall be subject to the provisions of this act in respect of weight, fineness, and value.

ART. IX. Worn-out coins which are turned into the treasury shall be withdrawn from circulation and shall be melted for the purpose of recoinage.

ART. X. The national currency and that of the United States of America shall be the only legal tender for the payment of obligations contracted while this law is in force; but payment in foreign coins shall be permitted when specifically agreed to by the contracting parties.

ART. XI. The Chief Executive is authorized to contract, by means of competitive proposals, with banking institutions domiciled in the Republic for the coinage of the currency under this act. The institution to which the contract is awarded shall bear for its own account all expenses incidental to the purchase of metals, the transportation and delivery thereof to the United States Mint, the cost of coinage, and transportation and delivery of the coins to the general treasury of the Republic.

ART. XII. The Executive shall reimburse to the contractor the amounts due in the following manner:

(*a*) Within 10 days following the delivery of each lot of coins, the value of the metal employed in the coinage thereof.

(*b*) Within 30 days following the presentation of the accounts which will accompany the respective delivery of coins, the amount of other expenses, including the stipulated commission. Bills for the cost of coinage, insurance, transportation, freight, and other necessary expenses incurred up to the time of delivery to the general treasury shall be supported by proper vouchers. The amounts so due shall be paid by the general treasury out of the coined money delivered.

ART. XIII. The Chief Executive shall conduct the necessary negotiations with the Government of the United States of America for the coinage of the national money by the United States Mint.

ART. XIV. The cost of coinage and other expenses incidental to this service shall be borne by the treasury of the Republic and shall be paid out of the profits obtained from the coinage.

ART. XV. The corporation with which the State contracts the coinage of the national money shall be authorized—

(*a*) To negotiate and carry out all acts and contracts connected with the coinage of money as authorized by this act.

(*b*) To purchase metals for the coinage of the money.

(*c*) To contract the cost of coinage and delivery of the money to the national treasury, including expenses of transportation, insurance, and such others as may be necessary.

ART. XVI. The Executive shall allow a commission not to exceed one-half of 1 per cent of the face value of the money coined, including therein all expenses of subastas[1] and all other expenses incurred down to the time of delivery of the money.

ART. XVII. Foreign money now in circulation, except that of the United States, shall cease to be legal tender; but it may circulate as merchandise, without prejudice to contracts in which payment therein is stipulated, taking into account the fact that in contractual acts the will of the contracting parties is the basis thereof.

ART. XVIII. The National Executive is hereby authorized to prevent the exportation of national metal money whenever he deems such action appropriate.

ART. XIX. All penal provisions concerning money shall be applicable to the currency created by this act.

The new Cuban coins, consisting of $20, $10, $5, $4, $2, and $1 gold pieces, $1 and fractions of a dollar in silver pieces, are to be placed in circulation, according to press reports, during the latter part of March, 1915. The first shipment of this money from the United States, where it was minted, will amount to $1,200,000.

Cuba is without a national currency, paper money, gold, silver, or copper, of any kind.

Debts are payable in Cuba in the kind of money stipulated in the obligation, and usually call for United States currency, Spanish or French gold, or Spanish silver. United States national-bank notes are accepted, but not the notes of French or Spanish banks.

The bonds of the Cuban Government are payable in American gold, and likewise all taxes, duties, and postage are collected, and the accounts of the treasury and post office department are kept in United States money.

In the Provinces of Santiago and Camaguey, United States money is used almost exclusively.

In the Provinces of Santa Clara, Matanzas, Habana, and Pinar del Rio custom dictates the use of the different kinds of money in a general way as follows:

---

[1] Expenses of advertising for bids, etc.

Car fare, sales of railroad tickets, freight charges, real estate, tobacco in bulk, and cigar-makers' wages are settled in American money.

Retail prices of articles selling for less than $10, including cigars and carriage hire, are quoted in Spanish silver.

All sugar transactions, and other transactions of importance, including the larger part of the loans made by the banks, are made in Spanish or French gold.

For the purpose of domestic exchange the "luis" (Napoleon) and "centen" (Alphonso) are arbitrarily called $4.24 and $5.30 Spanish gold, respectively. As the gold value of the former is $3.859, and that of the latter is $4.8238 American gold, the parity of an American dollar is approximately $1.09872 in Cuban Spanish gold. This rate varies in the market from $1.08 to $1.10¾.

The Spanish silver coins in circulation are the peso, doble-peseta, peseta, and real, valued at $1, 40 cents, 20 cents, and 10 cents, respectively. There are also 1 and 2 cent Spanish copper pieces in current use. The reales are quoted in quantities of $5 or more at from 3 per cent to 5 per cent premium and the copper pieces from 3 per cent to 10 per cent premium. Spanish silver is quoted in Spanish gold and fluctuates widely. During the past three years the rate has gradually approached 100, the present price being 99¼, or approximately 6¾ per cent discount from the arbitrary rate of 106 Spanish gold.

All denominations and kinds of United States currency are in circulation.

In addition to the Alphonso and Napoleon, but not so generally used, also gold coins valued at $17, $4.25, $2.12½, and $2.12, known as "onzas," "escudos," "medio-escudos," and "medio-luises," respectively, are in circulation.

Demonetization of all foreign coins.

LEGATION OF THE UNITED STATES OF AMERICA.

No. 272.] HABANA, *September 20, 1915.*

The honorable the SECRETARY OF STATE, *Washington.*

SIR: I have the honor to report that by decree No. 1224, of September 13, 1915, the President of Cuba prescribed the demonetization of all foreign coins heretofore in circulation in the Republic, excepting currency of the United States. The decree goes into effect December 1, 1915, after which date all obligations are payable in the new Cuban currency or in currency of the United States, the values to be the same. It is decreed that on that date all Spanish currency, both gold and silver, and French gold shall cease circulating as money, and importation of the same is prohibited. Furthermore, contracts made prior to December 1, payable in Spanish gold or French gold, shall thereafter be payable in either Cuban or American currency on a basis of $5 for the Spanish gold centen (25 pesetas) and $4 for the French louis (20 francs).

I have the honor to be, sir, your obedient servant,

GUSTAVE SCHOLLE.

LEGATION OF THE UNITED STATES OF AMERICA,

No. 273.] HABANA, *September 24, 1915.*

The honorable the SECRETARY OF STATE, *Washington.*

SIR: Supplementing my dispatch No. 272, of September 20, in regard to the presidential decree demonetizing all foreign coins heretofore in circulation in the Republic, excepting currency of the United States, I have the honor to report that on September 22, there was published another presidential decree in which the exchange value of Spanish gold and French gold was fixed at 19.30 cents for each peseta or franc making the centen (Spanish 25 pesetas gold) $4.82 and the louis (20 francs gold) $3.86, which are the same values

as fixed in the proclamation of the President of the United States on December 28, 1898.

In this decree the Spanish and French gold coins are allowed to be used in contracts between private persons as "merchandise" and not as legal tender.

It is apparent that this decree supersedes the previous one mentioned in my last dispatch on the subject, and is more in conformity with the currency act passed by Congress in October, 1914. (See dispatch No. 171, of October 26, 1914.)

I have the honor to be, sir, your obedient servant,

GUSTAVE SCHOLLE.

[1] Includes 3,332,300 colones ($1,549,519.50) not covered, viz: Banco Internacional, 1,691,950 colones ($786,756.75); Banco Comercial, 1,640,350 colones ($762,762.75). However, the Banco Internacional notes are guaranteed by Government bonds. The Banco Comercial is being liquidated and the assets of same are supposed to cover their notes in circulation.

10. Law passed during 1914:

Alfredo Gonzalez, constitutional President of the Republic of Costa Rica, in the exercise of authorization conferred by the decree of the legislature of August 8, 1914, decrees:

With the name of "Banco Internacional de Costa Rica" ("International Bank of Costa Rica"), and with establishment in the city of San Jose, an institution of credit emission of the State is hereby created, which shall be administered by individuals under the immediate supervision of executive authority.

Its object and constitution are as follows:

ARTICLE 1. From this date and until new provisions by executive authority the issue banks established in the Republic shall remain privileged except as to the exchange of their notes for gold.

ART. 2. The notes of said banks shall serve to pay all their obligations contracted in gold colones.

ART. 3. For the time that this decree is in force, articles 33, 34, and 40, of the bank law in force shall remain suspended in so far as they do not harmonize with what is herein ordered.

Given in San Jose, the 18th day of September, 1914.

(Signed) ALFREDO GONZALEZ.

The Secretary of State for the Treasury and Commerce:

(Signed) MARCELLO GUARDIA.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

[1] United States Mint at Philadelphia, Pa.

HONDURAS.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, and 10. None.

3. No industries of this kind carried on in Honduras.

6. For reply to this interrogatory see appendix to this report.

7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In banks.
Gold coin	[1] $4,571
Silver coin	[2] 936,304

[1] United States currency. [2] Pesos.

There are no public treasuries; the amount of Government money not deposited in banks constitutes merely sums required for making immediate payments and is said not to exceed 20,000 pesos.

8. Bank notes outstanding at the end of the year 1914: Issued by banks of issue, pesos 640,000, guaranteed, one-half by actual cash and other half by placed loans and discounts.

9. Premium on gold during 1914: North coast, highest premium, 130 per cent; lowest premium, 159 per cent; average premium, 144½ per cent. South coast and Tegucigalpa, highest premium, 138 per cent; lowest premium, 175 per cent; average premium, 156½ per cent.

11. Mint closed during 1914. No department of mines or reports bearing thereon.
12 (*a* and *b*). Exports of gold and silver during the calendar year 1914: Gold, $7,910; silver, $7,323.[1]

All gold and silver exported from this country was sent to the United States. Aside from figures given above, practically all gold and silver was shipped to New York in cyanide solution. For this reason it is impossible to separate the two metals in this report.

One hundred and thirty-eight pounds of gold and silver bearing ores were shipped to the United States, the value of which was 22,880 pesos, or about $9,152 United States currency; 156,686 pounds of gold and silver in cyanide solution were shipped to the United States, the value of which was 2,155,267.60 pesos, or about $862,107 United States currency.

Gold and silver exports.

[From Bulletin of the Pan American Union, March, 1914.]

Fiscal year 1911–12.	Value.
	Silver pesos.
Gold ore	49,939.44
Gold and silver cyanides	2,049,527.83
Gold and silver ore	20,823.85
Silver ore	14,696.25
Silver coin	323,595.00

GUATEMALA.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, 6, 10, 11, and 12 (*a* and *b*). None.
3. Gold and silver used in industrial arts during the calendar year 1914: Very little foreign gold coin and domestic silver coin.
7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In banks.
Gold coin	$56,805.78
Silver coin	234,177.62

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.
Government	$6,000,000
Banks of issue	125,524,093
Total	131,524,093

9. Premium on gold during 1914: Highest premium, 4.3 per cent; lowest premium, 1.92 per cent; average premium, 2.5 per cent.
The actual currency of the country is inconvertible paper.

[1] United States currency.

NICARAGUA.

Answers to interrogatories, 1914.

1, 2 (*a*), 4, 6, and 11. None. Nicaragua has no mint.
2 (*b*). Coinage executed at foreign mints for Nicaragua during 1914:

Denomination.	Pieces.	Value.
Silver:		
25 centavos	100,000	$25,000
10 centavos	220,000	22,000
Total	320,000	47,000
Copper: 1 centavo	1,300,000	13,000
Nickel: 5 centavos	300,000	15,000

3. Gold and silver used in industrial arts: No estimate can be obtained, but safe to say very little.
5. There are no statistics with reference to the importation of United States gold coin; have been informed that none has been brought in except small amounts by travelers and the sums which have been used by the Marine Corps.
7. Approximate stock of silver coin in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.	In circulation.
Gold coin	None.	None.	None.
Gold bullion	(1)	(1)	(1)
Silver coin	None.	[2] $143,000	[2] $171,000
Silver bullion	(1)	(1)	(1)

[1] No statistics.
[2] The National Bank of Nicaragua (Inc.) is the bank of issue for the Republic. The $143,000 referred to above consists of unissued silver (cordoba) coins held by the bank, and the $171,000 consists of coins placed in circulation by the bank.

8. The National Bank of Nicaragua (Inc.) is the bank of issue for the Republic. There are no other banks of issue. Notes outstanding December 31, 1914, approximately 1,720,000 cordobas. These were not covered by gold coin or bullion or legal-tender silver coin within the Republic. The notes are issued on a gold exchange standard basis, the exchange fund being provided for by the monetary law of March 20, 1912, copy of which has heretofore been filed with the Treasury Department. In addition to the above there is also estimated to be outstanding 2,000,000 pesos of old national bills which have not yet been redeemed by the National Bank of Nicaragua (Inc.).
9. By the sale of drafts on the exchange fund in the United States the cordoba was maintained on a parity with gold until about October 1, 1914, when the sale of drafts was suspended by reason of the unsettled conditions due to the European war and the consequent very large falling off in the revenues of Nicaragua. Gold exchange went to a premium in October of 103; November, 107; and December, 110.
Currency of the country.—In addition to notes of denominations of (C)$100, (C)$50, (C)$20, (C)$10, (C)$5, (C)$2, and (C)$1, notes of smaller denominations—(C)$0.50, (C)$0.25, and (C)$0.10—have been provided for and will be issued early in 1915.
10. *Laws passed during 1914.*—"Legislative decree of November, 1914, contract with the bankers, Brown Brothers & Co. and J. & W. Seligman & Co., of New York, and the National Bank of Nicaragua." Issue of (cordobas) $1,500,000 by the national bank and revenues and securities which guarantee that issue. Five hundred thousand dollars were issued to the Government, but none of the $1,000,000 provided for agriculturists was issued.
12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914: Coined silver, bank notes, etc., from United States: Silver and copper coins for the national bank, $50,000; bank notes, $26,000; total, $76,000.

Exportations, 1914.

SALVADOR.

Answers to interrogatories, 1914.

1. Amount of silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
		Pesos.
Pesos	2,800,000	2,800,000
25 cents	3,000,000	750,000
10 cents	1,500,000	150,000
5 cents	2,000,000	100,000
Total	9,300,000	3,800,000

2 (*a*), 4, 5, and 10. None.

2 (*b*). Coinage executed at foreign mints for Government of Salvador during 1914:

Location of mint.	Value.
In England	$700,000
In United States (Philadelphia mint)	2,700,000
Total	3,400,000

3. Fine gold and fine silver used in industrial arts. No official data available. Only small quantities of gold coins obtained from travelers.

(For answer to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.
Gold coin	$116,030.75	$2,058.39
Silver coin	553,902.73	3,664,937.70
Total	669,933.48	3,666,996.09

8. Bank notes outstanding at the end of the year 1914: Notes of banks of issue, $6,062,601. There are no Government notes.

9. Premium on gold during 1914: Highest premium, 230 per cent; lowest premium, 145 per cent; average premium, 187½ per cent.

11. Report on operations of mint: We have no mint.

12. Imports and exports of gold and silver coin during 1914:

Country.	Gold.	Silver.	
	Imports.	Imports.	Exports.
United States	$75.00 37,205.00	$2,700,000.00	$2,344.00
England		700,000.00	
Nicaragua		21,682.90	
Total	37,280.00	3,421,682.90	2,344.00

SOUTH AMERICA.

ARGENTINA.

Answers to interrogatories, 1914.

1. There was no gold or silver coinage during 1914. Nickel coinage was as follows:

Denomination.	Pieces.	Value.
5 centavos [1]	1,097,115	$54,855.75
10 centavos [1]	750,733	75,073.30
20 centavos [1]	526,770	105,354.00
Total	2,374,618	235,283.05

[1] These coins are to be placed in circulation to relieve the scarcity of fractional coin. As they gradually enter circulation an equal amount of paper money will be retired from circulation.

2 (*a* and *b*), 5, and 11. None.

3. Unknown. "It is believed that, although the people of Argentina buy important amounts of gold and silver jewelry and tablewares, the most of these are imported."

4. No data available.

6. It is impossible to give data on the quantity of gold obtained in the small exploitations of auriferous washes which exist all through the ranges of the Andes, which are, according to the mining laws, common property. Besides the gold which is extracted from gold ore such as auriferous quartz, being of such an elevated value in relation to its volume, escapes all attempt to obtain statistics.

7. Approximate stock of gold coin in the country on December 31, 1914: In public treasuries, $224,405,298,027.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.
Government	$788,911,355.50	$224,405,298,027
Banks of issue	250,000.00	250,000
Total	789,161,355.50	224,405,548,027

9. Premium on gold: Gold, in relation to paper money, has a fixed value, which is at the rate of 44 centavos for each 100 centavos paper.

10. Copies of laws attached hereto.

12 (*a*). Imports and exports of gold coin and bullion:

Country.	Imports.	Exports.	
	Coin.	Coin.	Bullion.
Germany	$345,800		
Brazil	12,633,913	$3,607,680	
Netherlands	45,040		
Paraguay	65,520		
United Kingdom	3,735,800	19,422,525	$4,284
Uruguay	1,134,313	1,474,875	
France		6,789,569	
Total	17,960,386	31,294,649	4,284

12 (*b*). During the year 1914 there was no importation or exportation of silver coin.

PROHIBITION OF GOLD EXPORTS.

The disappearance of the gold stocks, which constitute the principal guarantee of the stability of our banking institutions, encharged with the regularization of our economic existence, might come to cause harm to the proper balance between values and the currency, with grave detriment to consumption and to the national industry. The balances growing out of our foreign trade and financial relations could be acquitted by the usual resources of international credit, up to the time of the outbreak of the armed struggle, which has interrupted the normal course of our interchanges with the nations beyond the seas. In virtue of this consideration, and it being a precautionary measure that could be put in force with the discretion required by the circumstances, the Government applied to Congress for the law, passed the 12th of August, under number 9483, which provides for the total or partial prohibition of gold exports, during such time as a state of war shall subsist between the powers.

In the regulations of this law there is an exception granted in favor of the amounts of gold coin that outward-bound travelers may take with them, provided that the amount does not assume the character of an illicit exportation. Travelers who might find themselves in the case would be granted by the customs authorities a permit for the export of the corresponding amount. The permit would not be required of travelers carrying with them less than 500 pesos gold. The masters or pursers of shipping could obtain permits for the amount of the maritime freight as borne out by bills of lading or freight contracts.

The minister of finance would see to it that the Banco de la Nacion Argentina should facilitate the payment in gold of maritime freights during the maintenance of the prohibition of gold exports. The violation of these provisions would produce the forfeit of the sum, as provided for in the customs regulations.

SUSPENSION OF DELIVERY OF GOLD BY THE CAJA DE CONVERSIÓN.

By law No. 9481, promulgated August 9, the effects of law No. 3871 are declared suspended for 30 days, in respect of the obligation of the caja de conversión to deliver gold coin against paper currency, the Government being authorized to prolong this term for 30 days or to reduce it.

In virtue of this law, in the latter part of August the effects of this law were prolonged for another term of 30 days, because the same reasons that had caused its passage still subsisted.

In the beginning of September a message was sent to Congress giving notice of this Government measure. The Government stated that it was not only impossible to foresee the problems the country would have to face as a consequence of the European conflict, but also the incidences of our relations with foreign markets, and on this account it would be wise to arm the Executive with powers to defend our gold stock against harmful withdrawals. Similar measures had been adopted by the several nations to defend their respective gold stocks, hence by following a policy of this nature we would not do more than place ourselves on a parity with them.

On September 30 the law No. 9506 was passed and promulgated, providing that when the periods fixed by law No. 9481 should have expired the President remained authorized to continue the suspension for further periods of 30 days.

By decree of October 31 it was provided that the suspension of the law 3871, in respect of the obligation of the caja de conversión to pay out gold coin in exchange for paper currency, should be maintained until further notice.

The paper currency and its gold guaranty at the end of each month.

Month.	Aggregate circulation of paper currency.	Equivalent in gold pesos of the aggregate paper circulation.	Stock of gold in the caja de conversión.	Conversión fund in Banco de la Nación.	Aggregate stock of gold.	Percentage of gold to currency liabilities.

MONETARY PLETHORA IN ARGENTINA.

[Consul William Dawson, jr., Rosario, May 5.][1]

Paper money in circulation in Argentina on March 31, 1913, amounted to $373,000,000 (United States currency), of which 50 per cent was held by the banks. Circulation on March 31, 1914, was $348,000,000, the banks holding 45 per cent. Returns for March 31, 1915, show a total circulation of $395,000,000, of which the banks held 55 per cent. The following figures, according to "La Nación," Buenos Aires, show the situation of the banks as respects deposits and loans and discounts:

Date.	Total deposits.	Total loans and discounts.
Mar. 31, 1913	$630,658,000	$641,146,000
Mar. 31, 1914	589,897,000	607,305,000
Mar. 31, 1915	536,015,000	480,053,000

Whereas March 31, 1914, showed an excess of loans and discounts over deposits of $17,408,000, the returns for March 31, 1915, show deposits exceeding loans and discounts by $55,962,000. This means a credit restriction during the year of $73,370,000.

The present situation is due to the very conservative policy of banks ever since the beginning of the financial depression and the recent important issues of paper money against gold deposited in Argentine legations in payment of food products exported to the European continent, the United Kingdom, and the United States. The Banco de la Nación has suspended the 1 per cent interest formerly paid to depositors on current accounts. Arrangements have also been made for the issue of $26,700,000 in 180-day treasury notes at 6½ per cent, which will be taken by the banks as a favorable investment for surplus deposits.

The heavy demand abroad for Argentine food products, coupled with the tremendous falling off in imports, will entail the steady increase of circulation in Argentina. The monetary plethora is the natural result of lack of confidence and initiative following a long period of financial depression. The tardiness in resumption of commercial activity is further aggravated by the war. While it does not appear likely that the next few months will see any very marked improvement in the import trade, the eventual increase in Argentina's purchasing power due to the very favorable trade balance should be borne in mind by exporters looking for a future rather than an immediate market.

It is satisfactory to note that figures showing failures for April, 1915, are about half those of March and less than half as large as the figures for April, 1914.

[1] In Commerce and Trade Reports, June 17, 1915.

BRAZIL.

Answers to interrogatories, 1914.

1. Gold and silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.	
		In reis.	In United States currency.
20 milreis	1,980	39,600,000	$21,637.44
10 milreis	969	9,690.000	5,294.62
Total	2,949	49,290,000	26,932.06

2. (*a*) 4, 5, and 11. None.

(*b*) "A contract was given to a local firm on April 13, 1913, for the coinage of 60,000,000,000 reis. * * * The emission of silver to be up to the amount of 15 per cent of the value of paper money now in circulation—i. e., on the date of this decree (April 13, 1913) 50 per cent of the profits on this issue of silver to be employed in the reduction of the amortization fund."

This silver began to be imported into Brazil early in 1914. However, only 12,500,000,000 reis had been imported to date (June, 1915).

The Imperial Prussian Mint in Berlin coined silver coins for Brazil in 1914 as follows:

Denomination.	Pieces.	Value.	
		In milreis.	In United States currency.
2 milreis	2,857,500	5,715,000	$3,122,104.50
1 milreis	9,015,000	9,015,000	4,924,894.50
500 reis	3,330,000	1,665,000	909,589.50
Total	15,202,500	16,395,000	8,956,588.50

3. Gold and silver used in industrial arts: There are no statistics to be had, and expert opinion agrees that the quantity is so small as to be practically negligible.

For reply to No. 6, see appendix to this report.

7. There are no figures available as to the stock of gold and silver coin and bullion in the country on December 31, 1914. The quantity of gold in circulation is almost negligible, and no statistics are obtainable as to the amount of silver in circulation.

8. (*a*) Government notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government:	*Reis.*		
Convertible	[1] 157,786,930,000	(1)	(1)
Inconvertible	822,496,018,500		
Total	980,282,948.500 ($535,626,603.06)		

[1] The convertible amount is covered by the deposits of gold in the Caixa de Conversão on December 31 1914, as follows:

Country.	Monetary unit.	Amount.	Equivalent in United States currency.
British	Pounds sterling	2,958,764/10	$14,398,827.44
French	Francs	13,884,660	2,679,739.38
Brazilian gold	Reis	116,780,000	63,808.59
German	Marks	1,982,870	471,923.06
American	Dollars	27,136,675	27,136,675.00
Austrian	Kroner	11,160	2,265.48
Argentine	Pesos	29,310	28,284.15
Spanish	Pesetas	723,340	139,604.62
Total			44,921,127.72

There are no bank notes in Brazil

(*b*) The amount of silver deposits in the Caixa de Conversão is negligible.

9. There is a premium on gold. The actual currency of the country is convertible and inconvertible notes.

The premium on gold varies with the exchange, the par of the milreis being 27 pence. The premium over the year 1914, at sight on London, was as follows:

Highest premium	$15\frac{15}{16}$ pence.
Lowest premium	$10\frac{3}{32}$ pence.
Average premium	$14\frac{21}{32}$ pence.

10. Laws passed during 1914: Decree No. 10875 of May 6, 1914. Authorizing Messrs. Alfredo Drossner and Jules Roth, bankers, residing in Paris, to organize a banking company, with its head office in Rio de Janeiro.

Decree No. 2863, August 24, 1914: Authorizing the government to issue paper money to the amount of Rs. 250,000,000,000.

ISSUE OF BRAZILIAN BONDS AUTHORIZED.

[From Daily Consular and Trade Reports, Aug. 3, 1915.]

Consul General A. L. M. Gottschalk, at Rio de Janeiro, Brazil, reports the authorization by a decree of the Brazilian Government of the issuance of paper treasury bonds to the amount of 50,000 contos of reis, in accordance with the terms provided in a decree of February 5, 1915, in which it was ordered that they should bear interest of 5 per cent gold per annum, redeemable in one year unless the condition of the country shall require that the payment be extended. The bonds are to have the nominal values of 100, 200, 500, and 1,000 milreis. In Brazilian currency a conto is 1,000 milreis, and the gold milreis is equivalent to $0.546 United States currency.

AN ORDINANCE TO MAKE PROVISION FOR THE ISSUE OF BANK NOTES (FEB. 19, 1914).

Be it enacted by the governor of British Guiana, with the advice and consent of the court of policy thereof, as follows:

1. This ordinance may be cited as the bank-note ordinance, 1914.

2. In this ordinance, unless the context requires a different construction, the term "bank note" shall extend and apply to all bills or notes for the payment of money to bearer on demand, issued by any banker.

"Banker" shall mean any company incorporated by charter, or under the authority of an act of Parliament or the law of any colony, carrying on the business of banking.

* * * * * * *

6. (1) Whenever a banker desires to issue bank notes in this colony he shall—

(*a*) Notify in writing to the Government secretary the amount in value and the denomination in currency of the bank notes he proposes to issue, and the date of such intended issue.

(*b*) Deposit, and thenceforth at all times keep deposited in such manner and in such proportion as the governor in council may direct, either with the Crown agents for the colonies in London or with trustees in the colony to be appointed by the governor in council with the approval of the secretary of state for the colonies, or partly with the Crown agents and partly with such trustees, a fund to be called "The bank-note

reserve fund," consisting of coin, being current gold coin of the United Kingdom or of any British possession, or of securities authorized as trust securities in England under the trustee act, 1893, or under any amending act (including sect. 2 of the colonial stock act, 1900, or any section or act amending the said section), or partly of such coin and partly of such securities, equal to not less than the amount in value of the bank notes intended to be issued or for the time being in circulation: *Provided*, That it shall be lawful for the governor in council to call upon a banker to make up his bank-note reserve fund to the full value of his note issue, whenever it may be found that such reserve fund has fallen below the full value by reason of the depreciation in the market value of deposited securities.

* * * * * * *

7. The amount of bank notes issued under this ordinance by any banker shall in no case exceed the amount of the paid-up capital of the bank making such issue.

8. No bank note issued under the provisions of this ordinance shall be of less value than $5.

9. The bank-note reserve fund shall be held by the Crown agents for the colonies or by the trustees, separately or jointly, as a special fund, primarily available for and liable to the satisfaction of the claims of the holders of bank notes issued as aforesaid; but any net income derived from the fund, either from interest on deposits of the coin or on the securities, or otherwise, after payment of necessary expenses of administration, shall be the property of the banker by whom such coin or securities have been deposited. In the event of a banker failing to pay his bank notes when presented, or becoming bankrupt or insolvent, or ceasing to carry on business as such banker in this colony, the securities (if any) may be realized by the Crown agents or the trustees, and the fund shall be applied, so far as may be necessary, to the redemption of the bank notes of such banker, without prejudice to the rights of the holders of such bank notes against any uncalled capital of the banker, and to their rights of ranking with other creditors of the banker against his general assets. Subject to this primary liability the fund shall be applicable as part of the general assets of the banker.

* * * * * * *

11. Whenever a banker shall issue bank notes in excess of the amount authorized by the provisions of this ordinance he shall forfeit a sum not exceeding $25 a day for every day during which such excess of any sum not exceeding $5,000 shall continue, and a further sum of $25 a day for every day during which such excess shall continue for any portion of each additional sum of $5,000 in bank notes so issued in excess.

* * * * * * *

14. This ordinance shall not apply to the Colonial Bank.

15. This ordinance shall apply to the Royal Bank of Canada, subject to the proviso that the said bank shall be allowed to issue bank notes of the said bank to an amount not exceeding $500,000, or such larger amount as may be authorized by the secretary of state for the colonies, subject to a deposit of cash or securities or both as provided in section 6 hereof equal to not less than one-fourth of the amount in value of the total of the bank notes for the time being in circulation, and subject to the proviso that at the expiration of 10 years from the date hereof the governor in council, with the previous approval of the secretary of state, may by order direct that the entire amount or any portion of the amount of any bank notes issued under this section shall be recalled and redeemed by the bank in such manner and within such period as the order shall prescribe, and may direct that coin or securities, or both, to a larger or to any other amount than that prescribed shall be lodged by the bank.

16. The British Guiana Bank (amended charter of incorporation) ordinance,1900, shall be repealed from such date after the coming into operation of this ordinance as the governor shall notify by proclamation in the Gazette.

17. All penalties and forfeitures under this ordinance shall be sued for in the supreme court in the name of the attorney general, and the proceeds thereof, when recovered, shall be paid into the treasury to the credit of the general revenue of the colony.

18. This ordinance shall not come into operation unless and until the governor notifies by proclamation that it is his majesty's pleasure not to disallow the same; and upon the publication of such proclamation it shall take effect as from the 2d of February, 1914.

DUTCH GUIANA.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 10, and 11. Not applicable to this office. There is no mint.
3. No statistics are kept.
5. United States gold coin imported during 1914, $500. (For reply to No. 6 see appendix to this report.)

[1] No country indicated for the gold.

Exportation of gold in 1914.

[From Bulletin of the Pan American Union, April, 1915.]

The exportation of gold from Colombia in 1914 amounted to $5,122,224.37, divided as follows:

In bars	$3,580,108.38
In dust	1,126,904.45
In coin	415,211.54
Total	5,122,224.37

The weight of the gold exported was 14,319 kilograms, 78.5 grammes.

PARAGUAY.

Answers to interrogatories, 1914.

1, 2 (*a*) and (*b*), 4, 5, 6, and 11. None.

3. Amount of gold and silver used in industrial arts: A household industry too small to estimate.

7. Approximate stock of gold coin in the country on December 31, 1914: In public treasuries, $600,000; in banks, $125,000 (about); in circulation, $50,000.

8. Government and bank notes outstanding at the end of the year 1914: Government, $60,000,000 (all uncovered); banks of issue, $25,785.

In addition to the 60,000,000 pesos outstanding, a temporary issue of 25,000,000, redeemable within 12 months, was authorized by the law of August 14, 1914.

The Banco de la Republica has issued notes in gold, of which $25,785 still remain. This sum includes an amount of nickel equal to $6,000 gold.

The only coins existing in the country are a few nickels, the amount of which is not known; but $1,800,000 were originally issued in 50-cent notes and 20-cent notes, and 5, 10, and 20 cent nickel coins.

9. Premium on gold during 1914: Official rate, 23 per cent; commercial rate, 37 per cent; highest premium, 23 and 37 per cent; lowest premium, 17 per cent; average premium, 102 per cent.

10. Laws were passed during 1914 concerning loans of banks to other banks, and the moratorium with respect to debts due before August 14, 1914, and between August 14, 1914, and May 31, 1915.

12. (*a*) Gold exported during 1914: $800,000 in gold coin, principally to Argentina. No gold was imported.

12. (*b*) There were no imports or exports of silver during 1914.

TRANSLATION OF LAW OF AUGUST 14, 1914.

ARTICLE I. The Banco Agrícola is authorized to grant loans to the local banks to total amount of $25,000,000 of legal currency.

ART. II. For this purpose the Banco Agrícola is empowered to emit notes up to the said amount specified in the preceding article, using those intended for the service of exchange (i. e., for the renewal of delapidated notes withdrawn from circulation).

ART. III. The loans shall be sanctioned by resolution of a council composed of three members appointed by the Executive, and shall be subject to the following terms, guarantees, and conditions:

1. They shall not exceed one year, and shall be redeemed by installments in 6, 9, and 12 months.

2. They shall bear interest at 9 per cent per annum, payable at the appointed terms.

3. They shall be guaranteed by the accounts of the banks, and their amount shall not exceed 70 per cent of the value of the document accepted in surety.

4. Through the loans sanctioned by this law the State shall have priority in respect of the total property of the debtor.

ART. IV. The Banco Agrícola, as the repayment of the notes is effected, shall withdraw them from circulation and burn them.

ART. V. The amount of interest on the credits sanctioned in accordance with the present law shall be paid into the general funds.

ART. VI. A moratorium of 120 days is accorded in respect of obligations in gold and in foreign money.

ART. VII. Let it be communicated to the Executive.

Given in the sessions hall of the honorable Legislative Congress on the 14th of August, 1914.

The president of the Senate, P. Bobadilla; M. Arrias Cabral, secretary; the president of the Chamber of Deputies, Victor Abente Haedo; Z. Díaz Escobar, under secretary.

ASUNCION, *August 14, 1914.*

Let it be law, be communicated, published, and entered in the Official Register.

SCHAERER,
G. ZUBIZARRETA.

PERU.

[From Bulletin of The Pan American Union, February, 1915.]

The total coinage of silver and gold, respectively, in 1914 consisted of 729,433 soles (1 sol equals $0.48665) and £123,812 (1 Peruvian pound equals $4.8665). A law of September 9, 1914, provides for the coinage in the mint at Lima of copper centavos not in excess of 2,500,000 pieces.

COINAGE OF GOLD AND SILVER.

[By consul general, Callao-Lima, May 28, in Supplement to Commerce Reports, July 27, 1915.]

During 1914 there was a large increase in the coinage of gold and silver at the national mint, in comparison with the previous years, being largely due to the hoarding of both silver and gold coin by some of the small business firms upon the banks' introduction of paper money during September, 1914. Gold coin in 1-pound and one-fifth pound pieces were coined to the value of $605,450, in comparison with $357,215 during 1913.

Silver coin to the value of $369,777 was also manufactured at the mint during 1914, in comparison with $46,968 in 1913.

Gold coin to the value of $120,000 was imported during 1914 by one of the principal American mining companies. A law prohibiting the exportation of gold coin was promulgated shortly after the war began and is still in force.

Gold and silver, etc., exported to the United States as invoiced at the American consulate general at Callao, and the consular agencies of Paita, Salaverry, and Mollendo, with their values for 1913 and 1914:

Classification.	1913	1914	Classification.	1913	1914

SILVER AND GOLD MINING, ETC.

The mining of silver in the Republic, independent of copper smelting, is not conducted to any great extent. In fact, most of the silver that is reported as exported from Peru forms part of the copper shipped in different forms, and only a small portion is mined and shipped separately, as in silver bars, for example. During the recent financial crisis here there was such a shortage of both silver and gold that sufficient quantities were not obtainable in the country for coinage purposes. Some of the largest mining companies found it necessary to import from the United States both gold and silver in bars, to be manufactured here into coin of the country by the Government mint.

The exportation of all kinds of silver in ores during 1914, according to figures furnished by the Callao customs authorities, was 167,616 kilos (369,526 pounds), in comparison with 232,163 kilos (511,826 pounds) in 1913.

The quoted prices for this metal in standard bars during 1914 varied from $6.56 per troy ounce in January to $5.28 in December, 1914.

The old silver mines at Caylloma were operated during the year, but the production was less than in 1913. The tungsten mines in the vicinity of Huara were worked in the early part of the year, but operations were suspended later on account of the

market conditions. The borax mines in the southern part of the Republic were also idle at the end of 1914.

Among the gold mines those in the vicinity of Cerro de Pasco ran steadily, and two in the Departments of Arequipa and Apurimac operated throughout the year. A new mill of the Inca Mining Co. in Puno was completed, but the company operated only a part of the year. The year's production from the gold placer mines was small. The exports of gold for the year are roughly estimated at about 50 kilos (110 pounds), most of which constitutes part of the copper, lead, and other ores exported. La Mineria, of Yauli, gives the total production of gold in metallic form for the year 1914 as 670 kilos, most of which was produced in the Departments of Apurimac, Puno, and Junin. This gold was manufactured into Peruvian coin by the national mint to the value of £91,501 ($445,290). The exports of lead during the year were 2,280 tons, in comparison with 3,196 tons in 1913.

Exports of gold and silver, 1909–1913, inclusive.

[From Bulletin of the Pan American Union, Dec., 1914.]

Referring to the law of October 1, 1914, "authorizing the increased issue of bank checks" to 2,500,000 Peruvian pounds, United States Consul General Mr. Wm. H. Handley says:

"In comparison with the first issue of 1,100,000 Peruvian pounds in circular checks authorized by Congress on August 12, 1914 (law No. 1968), the principal provisions of the late act are as follows: The gold guaranty is reduced to 20 per cent instead of 35 per cent, as provided for in the first issue; banks are to pay 3 per cent for the amount of the issue in excess of the gold guaranty less the sum loaned the Government. The loan to the Government is increased from £100,000 to £500,000, guaranteed by revenues from the national tobacco tax (a Government monopoly). Circular bank checks of half-pound denomination will also be emitted. The Caja de Aherros of the Beneficencia (a savings bank of Lima) has been authorized to participate in the late issue, taking £300,000. All funds represented by the circular checks which are not presented for conversion 12 months after the commencement of the operation shall revert to the Government.

"The final enactment of this law was accomplished after many days of animated debate in both the senate and chamber of deputies, the majority of the senate being in favor of charging the banks 5 per cent for the use of the issue. El Commercio, the leading daily newspaper of the country and an organ of the present administration, vigorously fought the passage of the law in its present form, declaring that it meant the abandonment of the gold standard and its enactment would affect most unfavorably the financial status and credit of the Republic in the future as well as at the present time.

"The few patriotic and far-seeing members of Congress who have the general welfare of the country at heart were, however, in the majority, and the law was finally passed largely favoring the banks and the Government.

"Had the financial position of the Government been in a more healthy condition it is quite possible they would have been able to authorize the issue under more beneficial and secure terms to the country's interest, but, as was well known, the Government was at the time hard pressed for funds to meet its urgent local obligations, such as the payment of the troops, Government officials, etc., and a loan was most necessary, and it was impossible to secure one abroad. It was also generally recognized in the financial circles of Lima that the principal banks of the country, which are foreign—particularly the Bank of Peru and London, whose bondholders are largely French—could not render the necessary assistance unless the Government first authorized the banks to issue the paper money. Consequently it appears that the negotiations went through by mutual understanding between the banks and the present administration, both of whom have apparently profited by the negotiations at the expense of the nation and the partial loss of its financial prestige through the generally recognized abandonment of one of the most valuable assets of the Republic—the gold standard."

URUGUAY.

MONTEVIDEO, *May 5, 1915.*

The Honorable the SECRETARY OF STATE,
Washington.

SIR: I have the honor herewith to transmit to the department translation of a decree of April 27, 1915, determining the equivalents of the Uruguayan peso in foreign moneys for the purpose of collection of consular fees by Uruguayan consular officers.

Attention is respectfully invited to the fact that the value of the Uruguayan peso, according to this decree, is fixed at $1.05 United States currency.

I have the honor to be, sir, your obedient servant,

H. F. ARTHUR SCHOENFELD,
Chargé d'Affaires ad Interim.

DECREE DETERMINING THE EQUIVALENTS OF THE URUGUAYAN PESO WITH THE MONEYS OF OTHER NATIONS FOR THE PURPOSE OF COLLECTION OF CONSULAR FEES.

MINISTRY FOR FOREIGN AFFAIRS,
Montevideo, April 27, 1915.

The President of the Republic decrees:

ARTICLE 1. For the purpose of article 6 of the law establishing the consular tariff, the Uruguayan peso shall have as equivalent—

In Germany, 4 marks 50 pfennigs (M. 4.50).
In the Argentine Republic, 2 pesos 50 centavos ($2.50), in paper money legal currency.
In Austria-Hungary, 5 crowns 40 cents (crs. 5.40).
In Belgium, 5 francs 45 centimes (frs. 5.45).
In Bolivia, 4 shillings sixpence (£0/4/6).
In Brazil, 4,200 reis (rs. 4,200).
In Chile, 7 pesos 50 centesimos ($7.50), in money of legal tender.
In Cuba, 1 dollar 5 cents ($1.05), in American gold.
In Denmark, 5 francs 45 centimes (frs. 5.45).
In Spain, 6 pesetas (psts. 6.00).
In the United States of America, 1 dollar 5 cents ($1.05), in American gold.
In France, 5 francs 45 centimes (frs. 5.45).
In Holland, 2 florins 70 cents (fls. 2.70).
In England, 4 shillings sixpence (£0/4/6).
In Italy, 5 lire 50 cents (L5.50).
In Mexico, 4 shillings sixpence (£0/4/6).
In Norway, 5 francs 45 centimes (frs. 5.45).
In Paraguay, 38 paper pesos ($38.00), legal tender.
In Peru, 4 shillings sixpence (£0/4/6).
In Portugal, 1,600 reis (rs. 1,600).
In Sweden, 5 francs 45 centimes (frs. 5.45).
In the other countries there shall be considered as the equivalent of the Uruguayan peso 5 francs 45 centimes (frs. 5.45) or 4 shillings sixpence (£0/4/6).

ART. 2. Until the ministry for foreign affairs distributes the consular accounting books, consuls shall enter in the cash book the consular fees collected by their value in Uruguayan currency and their equivalents.

ART. 3. Honorary consular agents in deducting the 50 per cent of the collections up to the sum of 110 pesos Uruguayan gold ($110), which is due them according to article 17 of the law, shall consider as the equivalent of the currency collected the bank rate for sight drafts on the last day of the month.

ART. 4. After June 1 proximo the present decree shall be enforced and there shall cease to be applied the regulations issued under date of August 19, 1913.

ART. 5. Communicate, publish, and insert.

PERUVIAN GOLD LEGAL TENDER IN URUGUAY.

[Secretary of American Legation H. F. Arthur Schoenfeld, Montevideo, May 5, in Daily Consular and Trade Reports, June 9, 1915.]

The Government of Uruguay has issued a decree declaring the Peruvian gold pound legal tender and fixing its value at $4.70 Uruguayan, the same ss the pound sterling.

GOLD RESERVE OF URUGUAYAN GOVERNMENT BANK.

[Secretary of American Legation H. F. Arthur Schoenfeld, Montevideo, Apr. 3, in Daily Consular and Trade Reports, May 24, 1915.]

The gold reserve of the Bank of the Republic of Uruguay now amounts to $16,526,848, distributed in the following forms: Gold of the bank, $12,950,093; gold deposited for other banks, $1,995,494; gold deposited in Uruguayan legations, $1,581,261; total, $16,526,848. The notes in circulation on the basis of the bank's own gold reserve amount to $18,035,765 and sight bills to $5,679,015. The proportion of gold to bills and notes is, therefore, 54.61 per cent. Notes outstanding on the basis of gold held for other banks and of that deposited in legations of Uruguay abroad are in the proportion of 100 per cent. The entire note circulation amounts to $21,612,520.

VENEZUELA.

On January 15, 1912, the Government of Venezuela issued a decree fixing the values of the foreign gold coins found in circulation in that country and the tariff of values at which they shall receive and pay out foreign gold coins in all the offices and institutions that directly or indirectly collect or receive public funds, as follows:

	Bolivars.
The piece of 20 francs of France, Belgium, Italy, and Switzerland	20.00
Its fractions in proportion.	
The sovereign of England, or pound sterling	25.25
The half sovereign in proportion.	
The onzas (doubloons) of Spanish or patriotic gold, those of Central America of any year, and the Colombian onza of the weight of 25.8064 grams, 0.900 fine, as well as those of the other States of South America	80.00
Gold of the United States of North America, the double eagles or pieces of $20	104.00
Its fractions in proportion.	
German gold, the double crown or piece of 20 marks	24.75
Its fractions in proportion.	
The double condors of Colombia	100.00
Its fractions in proportion.	
The piece of 20 soles of Peru	100.00
Its fractions in proportion.	
The Mexican onza of the weight of 33.770 (33.841?), grams, 0.875 fine	100.00
The Isabella of Spain of the value of 25 pesetas	25.00
Its fractions in proportion.	

EUROPE.

AMERICAN CONSULATE,
CARLSBAD, AUSTRIA, *December 29, 1914.*

[Translation of an article from the Prager-Tageblatt (Prag.), Dec. 27, 1914. From Wallace J. Young, American consul.]

The recent issuance of 2-crown notes has not yet been a full remedy for the want of small moneys. Besides this, it has long been recognized that it would be very useful for the pay of the troops to have, besides the 2-crown notes, even 1-crown notes, as this would help greatly in diminishing the weight of the pay chests of the army paymasters. As we learn, a short time ago, the printing of 1-crown notes was begun. The total amount will not exceed 20,000,000 crowns. The time for the issuance of

these notes has not yet been fixed to a certainty. To simplify and facilitate money transactions, the coinage of half-crown pieces will serve. The amount of small coins in Austria has long been known to be too small, and there has been a permanent shortage of nickel coins. At present there are only 48,000,000 crowns in 20-heller pieces and 32,000,000 in 10-heller pieces in circulation. The coinage of half-crown pieces will not, as we hear, take up any of out stock in nickel metal. (NOTE.—It is presumed that these are to be of silver.)

DENMARK.

Answers to interrogatories, 1914.

1. Gold and silver coined during the calendar year 1914:

Denomination.	Gold.		Denomination.	Silver.	
	Pieces.	Value.		Pieces.	Value.
		Kroner.			*Kroner.*
20 kroner	920,090	[1] 18,401,800	25 ore	346,741	86,685.25
			10 ore	3,043,439	304,343.90
			Total	3,390,180	[2] 391,029.15

[1] United States currency, $4,933,290. [2] United States currency, $104,795.61.

2 (*a* and *b*), 4, and 9. None.

(For replies to Nos. 3 and 6, see appendix to this report.)

5. United States gold coin imported during 1914: Only what was brought by tourists, etc.; perhaps, altogether about $15,000.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.	In circulation.
	Kroner.	*Kroner.*	
Gold coin[1]	.....	84,176,468 [3]($22,559,293)	[2]
Gold bullion	.....	7,262,222 [3] ($1,946,276)	[2]
Silver coin	.....	2,500,000 [3] ($670,000)	[2]
Silver bullion	1,200,000 [3] ($321,600)	.....	.....
Total	1,200,000 [3] ($321,600)	93,938,690 [3]($25,175,569)	.....

[1] The gold coin is for the most part German, although a good deal of it is English.
[2] Very difficult to estimate, perhaps 10,000,000 kroner gold, and from 35,000,000 to 45,000,000 kroner silver.
[3] United States equivalent.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.
	Kroner.	*Kroner.*
Government	10,000,000 [1] ($2,690,000)	.....
Banks of issue	210,000,000 [1] ($56,280,000)	84,176,468 [1] ($22,559,293.42)
Total	220,000,000 [1] ($58,960,000)	84,176,468 [1] ($22,559,293.42)

[1] United States equivalent.

10. Laws passed during 1914: Law of August 2, 1914, authorizing temporarily to discontinue the payment of its notes in gold; law of August 20, 1914, temporarily establishing a limited moratorium; laws of September 25, 1914, and January 14, 1915, extending law of August 2, 1914.

11. Report on operations of mint: Duplicate copies inclosed herewith, for fiscal year April 1, 1913, to March 31, 1914. There is no department of mines.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.		Silver imports (bullion).
	Imports (coin).	Exports (coin).	
	Kroner.	*Kroner.*	*Kroner.*
Germany	[1] 36,000,000 [2] ($9,648,000)		
Sweden		[1] 13,500,000 [2] ($3,518,000)	
Norway		[1] 9,000,000 [2] ($2,412,000)	
United States			1,200,000 [2] ($321,600)
Total	36,000,000 [2] ($9,648,000)	22,500,000 [2] ($5,930,000)	1,200,000 [2] ($321,600)

[1] The figures are only estimated, being founded on information obtained from bankers. Official figures have not been published since the outbreak of the war. Most of the importations and exportations indicated were made toward the end of 1914.
[2] United States equivalent.

FINLAND.

Answers to interrogatories, 1913.

1. Gold and silver coined during the calendar year 1913:

Denomination.	Pieces.	Value.	
		Finnish marks.	United States currency.
Gold:			
20 marks	214,000	4,280,000	$826,040
10 marks	396,000	3,960,000	764,280
Total	610,000	[1] 8,240,000	1,590,320
Silver: 25 penni	832,000	[2] 208,000	40,144

[1] Whereof, in addition to gold bullion, $63,855 in United States gold coin (Finnish marks 330,013.60) and £14,000 English gold (Finnish marks 351,953.33), $67,927, were used.
[2] Whereof, in addition to silver bullion, 56,900 Finnish marks ($10,993) in Finnish worn-out silver coins were used.

2 (*a* and *b*), 9, 10, and 11: None.

(For answer to No. 3 see appendix to this report.)

4. Gold returned from use in the industrial arts to monetary use, deposited at the mint for coinage during 1913: Various jewels, gold leaf, bullion, etc., 64.6 fine ounces.

3. United States gold coin: Imported during 1913, $41,855; melted at mints, 1913, $63,855.

7. Stock of gold and silver in the country on December 31, 1913:

Classification.	In banks.	In circulation.
	Finnish marks.	*Finnish marks.*
Gold coin	31,566,320.00	32,683,680.00
Gold bullion	822,910.84	
Silver coin	2,156,369.25	12,034,677.50
Silver bullion	25,980.47	
Total	34,571,580.56 [1] ($6,672,315.05)	44,718,357.50 [1] ($8,630,643.00)

[1] United States equivalent.

8. Bank notes outstanding at the end of the year 1912:

	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Finnish marks.	*Finnish marks.*	*Finnish marks.*
In Bank of Finland	117,498,127.00 [1] ($22,677,138.51)	35,355,162.41 [1] ($6,823,546.35)	2,168,709.50 [1] ($418,560.93)

[1] United States equivalent.

9. Amount of bank notes outstanding at the end of 1912 not covered by legal-tender gold or silver coin or bullion: 79,974,255.09 Finnish marks ($15,435,031.23).

10. Bank notes outstanding at the end of the year 1913:

	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Finnish marks.	*Finnish marks.*	*Finnish marks.*
In Bank of Finland	113,003,612.00 [1] ($21,809,697.12)	36,127,093.33 [1] ($6,972,529.01)	2,156,369.25 [1] ($416,179.27)

[1] United States equivalent.

11. Amount of bank notes outstanding at the end of 1913, not covered by legal-tender gold or silver coin or bullion: 74,720,149.42 Finnish marks ($14,420,988.84).

12 (*a* and *b*). Importation of gold and silver during the calendar year 1913:

Gold.		Silver.	
Coin.	Bullion.	Coin.	Bullion.
Finnish marks.	*Finnish marks.*	*Finnish marks.*	*Finnish marks.*
1,636,421.42 [2] ($315,829.33)	[1] 27,877.00 [2] ($5,380.26)	61,637.40 [2] ($11,896.02)	[1] 362,387.00 [2] ($69,940.69)

[1] There was no export of gold or silver during 1913.
[2] Equivalent in United States currency.

FRANCE.

[From reports of the general assembly of the stockholders of the Bank of France, Paris, 1913–1915.]

Situation of the Bank of France and branches.

Year.	Metallic reserve.	
	Gold.	Silver.
	Francs.	*Francs.*
1911	3,190,300,000	805,200,000
1912	3,194,600,000	670,800,000
1913	3,517,400,000	640,100,000
1914[1]	4,158,500,000	355,900,000

[1] The metallic reserve was reinforced in 1914 by more than 641,000,000 francs, due to the steadiness of favorable exchange and a prudent monetary foresight, which proves, under present circumstances, a new and decisive justification.

Notes in circulation.

Year.	Value.	Year.	Value.
	Francs.		*Francs.*
1911 (average)	5,243,375,000	1913 [2]	5,713,551,290
1912 [1]	5,542,217,840	1914 [3]	10,047,899,720

[1] On Dec. 19, 1912, these notes were covered up to the amount of 4,027,900,000 francs by the metallic reserve and the remainder partly by our corresponding assets and productive investments.
[2] On Dec. 24, 1913, these notes were covered up to the amount of 3,972,100,000 francs by the metallic reserve and the remainder by our corresponding assets and productive investments.
[3] Up to Dec. 24, 1914: The issue of notes of 20 francs and of 5 francs commenced July 31; 10 days afterward the circulation reached to about 400,000,000 in notes of 20 francs and more than 200,000,000 in notes of 5 francs.

Article 1 of the law of August 5, 1914, stipulated that the sum of the issue of notes by the Bank of France and its branches, which was fixed to the maximum of 6,800,000,000 by the law of December 29, 1911, be provisionally raised to 12,000,000,000 and should be carried to a limit by decree rendered in council of state upon the proposal of the minister of finances.

Article 3 decided that, until otherwise provided by law, the Bank of France is exempted from the obligation to redeem its notes in coin.

GERMANY.

[Translation.]

Answers to interrogatories, 1914.

1. The gold coinage in the calendar year 1914 was as follows:

Denomination.	Pieces.	Value.	
		Marks.	United States currency.
20 marks	3,876,849	77,536,980	$18,453,801
10 marks	1,002	10,020	2,385
Total	3,877,851	77,547,000	18,456,186

The above gold coinage was made from retired imperial gold coins of the weight of 3,632.1731 kilograms, fine, and from gold bars purchased by the Reichsbank.

The silver coinage in 1914 was as follows:

Denomination.	Pieces.	Value.	
		Marks.	United States currency.
5 marks	2,057,579	10,287,895	$2,448,519
3 marks	5,212,597	15,637,791	3,721,794
2 marks	1,515,253	3,030,506	721,260
1 mark	30,242,637	30,242,637	7,197,748
50 pfennigs	16,145,478	8,072,739	1,921,312
Total	55,173,544	67,271,568	16,010,633

The silver coinage was principally made from silver purchased at the prevailing market price.

2 (*a*). No gold coins were coined at German mints for other countries during 1914.

The Imperial Prussian Mint in Berlin coined silver coins for Brazil in 1914 as follows:

Denomination.	Pieces.	Value.	
		Milreis.	United States currency.
2 milreis	2,857,500	5,715,000	$3,122,104.50
1 milreis	9,015,000	9,015,000	4,924,894.50
500 reis	3,330,000	1,665,000	909,589.50
Total	15,202,500	16,395,000	8,956,588.50

(*b*) The Hamburg Mint coined for the German East African Colony and Roumania the following (silver):

Denomination.	Pieces.	Value.	
		Rupees.	United States currency.
1 rupee	500,000	500,000	$158,666
½ rupee	100,000	50,000	15,867
¼ rupee	200,000	50,000	15,867
Total	800,000	600,000	190,400
For Roumania:			
2 lei	1,541,734	[1] 3,083,468	595,109
1 leu	2,443,467	[1] 2,443,467	471,589
½ leu	800,000	[1] 400,000	77,200
Total	4,785,201	[1] 5,926,935	1,143,898

[1] Lei.

2 (*b*). No coinage was executed by other governments for Germany.

3. Since the years 1906 and 1907 no official inquiries as to the quantities of gold and silver used in the industrial arts have been pursued, and no private estimates are known.

4. Only retired German gold and silver coins or foreign gold coins and gold and silver bars were used by the mint for coinage during 1914.

5. No United States gold coins were melted at the German mints during 1914.

(For reply to No. 6, see appendix to this report.)

7. Stock of gold and silver coin and bullion in the country on December 31, 1914:

Gold coinage up to the end of December, 1914 (after deducting recoinages)	marks..	5,134,326,000	($1,221,969,588)
Imperial gold coins in Reichsbank on Dec. 31, 1914	marks..	1,659,811,000	($395,035,018)
Gold bullion and foreign gold coins in Reichsbank on same date	marks..	433,000,000	($103,054,000)
Total	marks..	2,092,811,000	($498,089,018)
Silver coinage up to the end of December, 1914 (after deducting recoinages)	marks..	1,217,325,757	($289,723,530)
Silver coins in Reichsbank on same date	marks..	34,936,000	($8,314,768)

The amount of gold and silver held by the public treasury is not known, except as to the available war fund of 120,000,000 marks in gold coin.

8. The amount of bank notes in circulation on December 31, 1914, amounted to 4,774,745,000 marks ($1,136,389,310), of which 2,199,924,000 marks ($523,581,912) were not covered by legal-tender gold and silver coin and bullion.

According to the law of April 30, 1874, treasury notes were issued to the amount of 120,000,000 marks ($28,560,000), and in accordance with the law of July 3, 1913 (R. Gs. Bl., S. 521), an additional 120,000,000 marks were issued upon other existing financial revenues. Outside of the regular gold stock of the Reichsbank the imperial war fund is always maintained at 120,000,000 marks.

There was, besides, at the Reichsbank, in accordance with the imperial treasury loan law of August 4, 1914 (R. Gs. Bl., S. 340), current imperial treasury loan notes to the amount of 1,317,000,000 marks ($313,446,000), all of which were in circulation at the end of 1914.

9. There is no premium on gold.

10. A copy of the treasury loan fund law is annexed hereto.

11. There is no mint report published.

12. (*a* and *b*). No estimate upon imports and exports of gold and silver has been made public since the outbreak of the war.

TREASURY LOAN LAW OF AUGUST 4, 1914.

ART. 2. By authorization contained in sections 9, 17, and 44 of the bank law of March 14, 1875 (R. Gs. Bl., S. 177), the amount of imperial treasury notes was fixed; similarly the imperial treasury loan notes were fixed by the above-named law not to exceed 1,500,000,000 marks ($357,000,000). The German confederacy is to authorize the necessary issue to supply any deficiency in the imperial treasury loan notes.

ART. 3. The least value of the loan notes issued will be of 100 marks ($23.80), guaranteed for a not longer period than three months, and only exceptionally may be carried to six months.

GREAT BRITAIN.

Answers to interrogatories, 1913.

1. Gold and silver coined during the calendar year 1913:

Denomination.	Pieces.	Value.
Gold:		
Sovereigns	24,521,789	£24,521,789
Half sovereigns	6,090,000	3,045,000
Total	30,612,789	[1] 27,566,789 ($134,153,779)
Silver:		£. s. d.
Half crowns	4,089,888	511,236 0 0
Florins	4,548,060	454,806 0 0
Shillings	9,012,960	450,648 0 0
Sixpence	7,500,240	187,506 0 0
Threepence	7,143,840	89,298 0 0
Maundy—		
Fourpence	1,333	22 2 4
Threepence	1,228	16 15 0
Twopence	1,329	11 1 5
Penny	1,526	7 15 8
Total	32,300,404	[2] 1,693,551 14 5 ($8,241,669)

[1] Of this amount £24,666,789 was new coinage, and £2,900,000 was recoinage of native gold coins containing 675,956.99 fine ounces of gold.

[2] Of this amount £941,726 2s. 4d. was new coinage; £607,548 19s. was recoinage of native silver coins, containing 1,876,203 fine ounces of silver; and £144,271 5s. from Mexican dollars, containing 485,276 fine ounces of silver. In addition to this amount, Mexican dollars were recoined into colonial coins to the amount of £73,208 5s. 4d., containing 246,246 fine ounces of silver.

2 (*a*). Coinage executed at the British mint for other Governments during the calendar year 1913:

Country.	Denomination.	Bronze.	Silver.	Nickel bronze.
Australia	2s., 1s., and ½ pence	£15,000	£180,000	.....
British Guiana	Fourpence pieces	.....	£500	.....
British Honduras	Cent pieces	$250	.....	.....
British West Africa	2s., 1s., 6, 3, 1, ½, and 1/10 pence.	.....	£667,000	£11,810
Ceylon	50, 25, and 10 cents	.....	Rs. 600,000	.....
Cyprus Island	18 and 9 piasters	.....	£5,000	.....
East Africa and Uganda	50, 25 and 10 cents	.....	£175,000	Rs. 50,000
Jersey (island)	Pence and half pence	£1,000	.....	.....
Malta	½ farthings	£100	.....	.....
Mauritius (island)	Cent pieces	Rs. 5,000	.....	.....
Newfoundland	do	$4,000	.....	.....

2 (*b*), 4, and 10. None.

(For answer to No. 3, see appendix to this report.)

5. The returns do not distinguish the nationalities of foreign gold coin imported into the United Kingdom. No United States gold coin melted at mints.

A statement of the value of gold ore and bullion imported into the United Kingdom from the United States of America in 1913:

Description.	Value.
Gold ore	£4,516 ($21,977)
Gold bullion:	
Unrefined in dust, amalgam, and bars	£58,154
Refined in bars	£6,082
Total	£64,236 ($312,605)

(For answer to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1913:

Classification.	In banks.	In circulation.
Gold coin [1]	£44,000,000 ($214,126,000)	£69,000,000 ($335,788,500)
Gold bullion	[2]	[2]
Silver coin	£7,000,000 ($34,065,500)	21,500,000 ($104,629,750)
Silver bullion	[2]	[2]

[1] No estimate has been made since 1910. [2] No information available.

8. Government and bank notes outstanding at the end of the year 1913:

No notes are issued by the Government.

Banks of issue: The average weekly circulation for the month ended December 6, 1913, was as follows:

England and Wales:		
Bank of England (month ended Dec. 10)	£27,537,885 ($134,013,117)	
Private banks	£71,343 ($347,191)	
Joint stock banks	£54,673 ($266,066)	
Total for England and Wales		£27,663,901 ($134,626,374)
Scotland		£8,219,606 ($40,000,713)
Ireland		£9,019,315 ($43,892,496)
Total for United Kingdom		£44,902,822 ($218,519,583)
Deduct:		
Gold coin and bullion held in the Bank of England against notes in circulation	£10,129,520 ($49,295,309)	
Gold and silver in Scottish and Irish banks of issue held against notes	[1] £11,380,813 ($55,384,726)	
Total		£21,510,333 ($104,680,035)
Amount of bank notes outstanding, not covered by legal-tender gold and silver coins or bullion, at the end of 1913		[2] £23,392,489 ($113,839,548)

[1] Not specifically earmarked to the redemption of notes.
[2] Including £18,450,000, which the Bank of England is authorized to issue against securities.

9. Premium on gold during 1913: Highest price, £77/9; lowest price, £77/9; average price, £77/9.

11. A copy of the mint report for 1913 forwarded herewith.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1913:

[From Sharps & Wilkins's Bullion Circular.]

LONDON, *December 30, 1914.*

Any useful consideration of the movements of gold during the year is difficult to make, the ordinary operations of commerce having been so entirely deranged by the war, and exports and imports of the metal alike have been abnormal.

During the first seven months to July there was no uncommon feature to record, and since then the restrictions on the shipment of bullion, and the moratoria in many of the countries of the world have tended to keep supplies from being exchanged.

The Bank of England reserve has, however, been immensely augmented, the average total of about £37,000,000, having now grown to about £88,000,000, £17,500,000 of which is set aside as a special reserve against the new treasury notes. This has not all been deposited in London, facilities having been given to receive at Ottawa, South Africa, and elsewhere gold coin and bullion to the credit of the London institution, thereby avoiding the risk of transporting large amounts across the sea in time of war. This policy has achieved its object with the least amount of inconvenience to all concerned.

The total imports and exports of gold and silver during the past 10 years have been as follows:

Year.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1905	£38,500,000	£31,000,000	£14,400,000	£14,600,000
1906	46,100,000	42,600,000	19,300,000	18,900,000
1907	57,100,000	50,900,000	17,983,000	16,920,000
1908	46,100,000	49,900,000	12,400,000	12,000,000
1909	54,700,000	47,200,000	13,800,000	12,800,000
1910	57,300,000	50,900,000	15,950,000	13,500,000
1911	48,700,000	40,100,000	16,100,000	16,900,000
1912	52,688,000	46,538,000	18,320,000	18,400,000
1913	59,500,000	46,100,000	15,700,000	16,100,000
1914	50,500,000	30,600,000	12,800,000	10,900,000

THE MONETARY POSITION OF GREAT BRITAIN.

[From the Mining World, etc., London, Jan. 30, 1915.]

After nearly six months' warfare of the most extensive and most expensive kind the monetary position of Great Britain is as sound as the proverbial bell. This is what may be gathered from the remarkable speech delivered this week at a bank meeting by Sir Felix Schuster. The war came upon us unexpectedly. Had we known it was coming, as the Germans contend we did, our arrangements to meet it would have been made at leisure instead of in haste. London at once felt the strain, and the bank rate was at one time as high as 10 per cent. The first necessity was additional currency, and this was provided by the £1 and 10s. notes, whilst the credit of the country was aided by the moratorium, which, established early in August, came to an end in the first days of November. Another proof that we did not expect war was that the stock of gold in the issue department of the Bank of England had been allowed in July to go as low as £26,000,000, whereas at the end of December it was £69,000,000, after having been as high as £72,000,000, and this when we had been at war nearly five months. It is now £89,000,000. This stock is exclusive of the reserve of £21,000,000 against the new currency notes. Great help was afforded early in August by the agreement of the Government with the Bank of England to guarantee it against any loss on approved bills accepted before August 4 (the date of the declaration of war), and this brought considerable relief to the discount market, giving confidence to the entire financial world. It liberated funds which soon produced easier conditions.

The war was at first financed to the amount of £90,000,000 by the issue of treasury bills, which were subscribed for three times over, until, in November, the war loan of £350,000,000 was issued, and, to quote the words of Sir F. Schuster, was an "unquali-

fied success." No such issue had ever been attempted before, and its success was the more remarkable, seeing that the stock exchange was closed and securities could not be freely sold to pay for subscriptions. Moreover, there was no appeal to the foreign investor. A great part of the loan has been paid up in full.

If we turn from the region of pure finance to the general commerce of the country, we shall find that this has been well maintained, owing to the admirable manner in which our fleet has preserved the command of the sea. Business received a shock in the first few days after the opening of the war, but has since proceeded upon the usual lines. There have been complaints that the banks were not assisting trade as they might have done, and in the House of Commons it was even threatened by the chancellor of the exchequer that he would "name" some of them; but there has been improvement, and Sir F. Schuster is probably right in saying, "All reasonable demands that commerce made on the banks have been and are being fully satisfied." In this gentleman's opinion the trade outlook is hopeful. He does not deny that many industries have suffered, but others have shown "remarkable adaptability to the new order of things." Even the cotton industry has surmounted those formidable difficulties by which it was beset at the outset, and trade failures have been few. Agriculture is flourishing, and there has been no lack of employment. Labor, indeed, has been rather scarce, owing to the patriotic response to the demands of the army.

At the time when the world's capital is being squandered with the right hand and with the left Sir F. Schuster states that "the value of loanable capital in Lombard Street has actually depreciated." Monetary conditions in London are quite easy. The stock exchange has reopened under restrictions, and there has been an embargo placed on new issues of capital, it being essential that the resources of the country should be preserved for the successful prosecution of the war. The funds at the command of the Government are at present ample, and many will be surprised to hear from so good an authority as Sir F. Schuster that "fresh loan operations during the coming months seem hardly probable." Should money be required, the market will welcome new issues of treasury bills.

GREECE.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, 6, 11, and 12 (*a* and *b*): Greece has no mint. None.

7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In public treasury.	In national bank.	In circulation.
Gold and silver coin	[1]	*Francs.* 39,166,997 ($7,559,230)	[1]

[1] No statistics.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Francs.	*Francs.*	*Francs.*
Government	60,951,915		
Banks of issue		[1] 39,166,927 [2] 172,946,117	[2] 191,225,034
Total	60,951,915 ($11,763,719)	212,113,044 ($40,937,817)	191,225,034 ($36,906,431)

[1] Gold in the national bank. [2] Gold in banks abroad.

9. Gold is at par.

10. Convention of January 30, 1914, permitting national bank to issue 25,000,000 francs ($4,825,000) in bank notes under law 3642.

[Translation.]

ITALY.

Answers to interrogatories, 1915.

1. No gold coinage.

Amount of silver coined during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Lire.	United States currency.
New coinage: 2 lire	10,352,475	20,704,950	$3,996,055
Recoinage: 2 lire	37,567	75,134	14,501

2 (*a*) Three hundred thousand silver rupees were coined for Italian Somaliland.

2 (*b*) 3, and 5. None.

4. No information. The silver coinage on 1914 was all made from old coins and from bullion bought on the market.

(For reply to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	Nominal value.	
	Lire.	United States currency.
Gold:		
In coins—		
Decimal	343,718,015	$66,337,577
Nondecimal	10,301,081	1,988,109

[1] In March there were consumed 17 kilograms procured from Great Britain, which, however, were wrongfully assigned to Germany.

[2] Of which 34,030 kilograms are in the royal mint.

MONTENEGRO.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 3, 4, 5, 6, 7, 10, 11, and 12 (*a* and *b*). No replies.

8. Amount of Government notes outstanding at the end of the year 1914: 5,000,000 (perpers) ($965,000).

9. Actual currency of the country: 20 francs=20 perpers.

NETHERLANDS.

Answers to interrogatories, 1914.

1. Gold and silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Florins.	United States currency.
Gold (new coinage):			
10 guilders (florins)	738,476	7,384,760	$2,968,673.52
Ducats[1]	246,560	1,405,392	564,967.58
Total	985,036	8,790,152	3,533,641.10
Silver:			
1 guilder (florin)[2]	15,785,000	15,785,000	6,345,570.00
½ guilder (florin)[2]	5,600,000	1,400,000	562,800.00
⅒ guilder (florin)[2]	9,000,000	900,000	361,800.00
Total	30,385,000	18,085,000	7,270,170.00
¼ guilder (florin)[3]	10,000,000	2,500,000	1,005,000.00
⅒ guilder (florin)[3]	9,600,000	960,000	385,920.00
Total	19,600,000	3,460,000	1,390,920.00

[1] This coin has no fixed value and is not legal tender; the value is about 5.70 florins.
[2] For circulation in the mother country.
[3] For circulation in Netherlands Indies.

Total silver coinage, 21,545,000 florins ($8,661,090), 20,775,277 florins ($8,351,661.35) of which was new coinage and 769,723 florins ($309,428.65) was recoinage of domestic coins, 408,320 florins of the face value of 425,988 florins and colonial coins, 361,403 florins of the face value of 373,450 florins.

2 (*a* and *b*), 4, 5, and 9. None.

(For reply to No. 3, see appendix to this report.)

6. No domestic production; product of colonies will be furnished later.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.	In the Netherlands Bank.	Circulation.
	Florins.	*Florins.*	*Florins.*
Gold coin	11,815 ($4,749)	68,516,880 ($27,543,786)	Unknown.
Gold bullion		147,021,000 ($59,343,642)	
Silver coin	265,058 ($106,553)	1,803,500 ($725,007)	85,772,500 ($34,480,545)
Silver bullion		785,000 ($315,570)	
Total	276,873 ($111,302)	218,726,380 ($87,928,005)	85,772,500 ($34,480,545)

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Florins.	*Florins.*	*Florins.*
Government (entitled "Zilvertons")	11,470,853.50		
Banks of issue	493,678,000.00	216,137,880	1,803,500
Total	505,148,853.50	216,137,880 ($86,887,428)	1,803,500 ($725,007)

10. Laws passed during 1914 affecting the currency or banking: Royal decree of July 31, 1914, sanctioned by the law of August 3, 1914, prohibiting, for the time being, the exports of gold coin and gold metal without special consent of the Government.

Royal decree of July 31, 1914, lowering for the time of the extraordinary circumstances from 50 to 20 per cent the proportion in which the outstanding notes and the aggregate credit balances of the accounts current of the Netherlands Bank must be covered by precious metal and coin, legal tender up to any amount. On June 19, 1915, the said proportion was about 62 per cent.

Law of August 3, 1914, that during the extraordinary circumstances the Netherlands Bank may be exempted by royal decree from the obligation to redeem its notes against coins legal tender up to any amount. Until now this exemption has not been granted. On June 19, 1915, the bank had at its disposal florins 63,540,410 in gold coins, florins 268,373,553 in gold metal, and florins 2,567,945 in silver coins against florins 482,502,745 notes outstanding and florins 54,211,660 credit balances.

Law of August 6, 1914, providing for the issue of Government notes (called "Zilvertons") up to a maximum amount of florins 25,000,000 in denominations of florins 5, florins 2.50, and florin 1. These notes are legal tender up to any amount and must be withdrawn from circulation as soon as the silver coins necessary for their redemption can be disposed of. The notes of florins 5 and florin 1 are withdrawn from circulation. On June 19, 1915, florins 5,565,117.50 (notes of florins 2.50) were in circulation.

11. A copy of the report on the operations of the mint at Utrecht will be sent as soon as it is published.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Classification.	Gold.		Classification.	Silver.	
	Imports.	Exports.		Imports.	Exports.
	Florins.	*Florins.*		*Florins.*	*Florins.*
Gold coin	44,619,542	248,010	Silver coin	1,356,194	3,085,896

Total	52,432,748 ($21,077,965)	8,258,030 ($3,319,728)	Total	10,228,982 ($4,112,051)	3,240,826 ($1,302,812)

[Translation.]

RUSSIA.

Answers to interrogatories, 1913.

1. In the year 1913 no gold was coined in Russia. Silver was coined in 1913 as follows:

Denomination.	Pieces.	Value.
		Rubles.
1 ruble (at 0.900) [1]	1,522,125	1,522,125.00
50 kopecks (at 0.900)	6,420,017	3,210,008.50
20 kopecks (at 0.500)	4,250,017	850,003.40
15 kopecks (at 0.500)	5,300,017	795,002.55
10 kopecks (at 0.500)	7,250,017	725,001.70
5 kopecks (at 0.500)	1,300,017	65,000.85
Total	26,042,210	7,167,142.00 ($3,691,078.13)

[1] Of which 1,472,019 1-ruble pieces were of a special type, coined in commemoration of the centennial of the "House of Romanoff." (Imperial decree of Feb. 15, 1913.)

For the above silver coinage there were remelted the following: Coins of the fineness of 0.900, 240,368.60 rubles ($123,789.83); coins of the fineness of 0.500, 3,130,957.40 rubles ($1,612,443.06).

2 (*a* and *b*), 5, 9, 10, and 11. None.

(For answer to No. 3, see appendix to this report.)

4. In 1913 there were remitted to the mint to enter into the coinage the following: Objects of art—In fine gold, 338.7 ounces of the value of 13,607.95 rubles ($7,008.09); in fine silver, 7,821.1 ounces of the value of 13,517.91 rubles ($6,961.72).

7. Approximate stock of gold and silver in Russia: On January 1, 1914, the reserves in the State bank and treasuries amounted to 160,720,078.24 rubles; in vaults of the State bank, 1,343,372,322.78 rubles; total, 1,504,092,401.02 rubles ($774,607,586.53), of which 656,800,000 rubles ($338,252,000) were Russian gold coins, 7,600,000 rubles ($3,914,000) were Finlandish gold coins, and 128,700,000 rubles ($66,280,500), foreign gold coins.

Gold at the mint, 23,635,762.35 rubles ($12,172,417.61); estimated gold in circulation, 494,200,000 rubles ($254,513.000).

Besides the effective gold stock found in Russia the State bank carries, in accordance with its balance, the following foreign sums:

	Rubles.
Balances accredited to its current accounts	163,089,169.26 ($83,990,992.17)
Difference between the amount of drafts and foreign cash balances in their possession, 4,417,243.64 rubles, and drafts delivered by them payable to foreign countries	4,370,792.20 ($2,250,957.98)
Total	167,459,961.46 ($86,241,880.15)

Stock of silver in Russia on Jan. 1, 1914:

Balance in the State Bank—	
Silver coins (at 0.900)	39,979,000 ($20,589,185)
Subsidiary silver coins (at 0.500)	16,477,000 ($8,485,655)
Copper coins	1,376,000 ($708,640)
At the mint, silver and copper coins	2,842,000 ($1,463,630)
In circulation (estimated)—	
Silver coins (at 0.900)	122,700,000 ($63,190,500)
Silver coins (at 0.500)	103,100,000 ($53,096,500)

8. On Jan. 1, 1914, the amount of credit notes in circulation was 1,664,700,000 ($857,320,500)

On the same date the holdings in the State bank was—

	Rubles.	
Russian notes	1,527,800,000	
Foreign notes	167,400,000	
		1,695,200,000 ($873,028,000)
Total		3,359,900,000 ($1,730,348,500)

According to the terms of the law the issuing power of the bank on January 1, 1914, was 330,500,000 rubles ($170,207,500).

The Russian credit notes are guaranteed exclusively by gold, according to law.

12. Imports and exports of gold during the calendar year 1913:

NOTE.—1 pood = 40 pounds (or 16.38 kilograms).

13. Description of the 1-ruble pieces coined in commemoration of the centennial of the "House of Romanoff" (imperial decree of Feb. 15, 1913): On the obverse, two effigies, half busts adjoined; the first a delineation of His Majesty the Emperor Nicolas II; the second a delineation of the Czar Michel Federovitch. On the reverse, the seal of the Empire; in the upper part the inscription "РУБЛЬ" (ruble); and underneath the date, 1613–1913. On the edge a channeled inscription bearing the indication of the weight of fine metal contained.

NEW NOTE ISSUE OF RUSSIAN GOVERNMENT BANK.

Consul General John H. Snodgrass, Moscow, Apr. 21, in Daily Consular and Trade Reports, June 2, 1915.]

In Russia the right of emission by the Government bank is limited by law. It could issue bank notes without a corresponding gold deposit for only $155,000,000; ordinarily bank notes had to be covered ruble by ruble in gold. At the beginning of the war the council of ministers passed a law, which received Imperial sanction August 9, 1914, and in accordance with which the amount of bank notes that could be issued by the Government bank without gold deposit was raised to $773,000,000. A law has been passed receiving imperial confirmation March 30, 1915, by which the amount of bank notes that may be issued is increased by $515,000,000. This is meant as a temporary measure.

Thus the bank is permitted to issue notes for $1,288,000,000 besides the amount of bank notes that are secured by gold, ruble for ruble. If the bank issues notes for the above sum, the amount of gold deposits will be equal to 40½ per cent of the sum total of bank notes issued.

MONETARY CIRCULATION IN RUSSIA.

[From L'Économiste Européen, Paris, Aug. 20, 1915.]

The abrupt attack by Germany in the month of August, 1914, carried into Russia, as into all European countries, a strong monetary contraction; the circulation of metallic money was abruptly halted, and gold remains imprisoned in the hands of the public.

During the first six months of 1915 the reserve of the Bank of Russia increased only by 20,000,000 rubles ($10,300,000), while on January 1, 1915, the circulation of gold amounted to nearly 460,000,000 rubles ($236,900,000), as may be seen by the following table:

Circulation of gold in Russia.

Date.	Value.	
	Rubles.	United States currency.
Jan. 1, 1910	580,900,000	$299,163,500
Jan. 1, 1911	641,700,000	330,475,500
Jan. 1, 1912	665,800,000	342,887,000
Jan. 1, 1913	628,700,000	323,780,500
Jan. 1, 1914	494,200,000	254,513,000
Jan. 1, 1915	459,800,000	236,797,000

On January 1, 1915, the gold in circulation in Russia was composed as follows:

Denomination.	Value.	
	Rubles.	United States currency.
15 rubles (imperial)	21,100,000	$10,866,500
10 rubles	223,200,000	114,948,000
7½ rubles (½ imperial)	10,300,000	5,304,500
5 rubles	205,200,000	105,678,000

SERVIA.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
		Dinars.
New coinage:		
2 dinars	2,500,000	5,000,000
1 dinar	6,500,000	6,500,000
50 para	7,000,000	3,500,000
Total	16,000,000	15,000,000 ($2,895,000)

2 (*a*), 3, 4, 5, and 11. None. There is no mint in Servia.
2 (*b*). The above silver coinage was executed at the mint of Paris, France.
(For reply to No. 6, see appendix to this report.)
7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In public treasuries.	In circulation.
		Dinars.
Gold coin	.....	[2]
Silver coin	[1]	24,000,000 ($4,632,000)

[1] Could not be ascertained. [2] Only foreign gold coin in circulation.

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Dinars.	*Dinars.*	*Dinars.*
Banks of issue	167,261,000 ($32,281,373)	3,665,000 ($707,345)	163,596,000 ($31,574,028)

9. Premium on gold as compared with the actual currency of the country: 32½ per cent. Premium during 1914: Highest premium, 40 per cent; lowest premium, 0.10 per cent; average premium, 20 per cent.

Law passed during 1914 affecting the currency: Copy herewith.

12 (*a* and *b*). Exports of gold and silver during the calendar year:

Country.	Gold ore.	Silver ore.
Austria-Hungary	*Dinars.* 600,987 ($115,990)	*Dinars.* 34,425 ($6,644)

Law relative to the coinage of silver money:

ARTICLE 1.

The minister of finance is authorized to coin and put into circulation 15,000,000 silver dinars, as follows: 3,500,000 silver dinars equal to 7,000,000 coins of nominal value of 0.50 paras; 6,500,000 silver dinars coins of nominal value of 1 dinar; 5,000,000 silver dinars equal to 2,500,000 coins of nominal value of 2. dinars.

ARTICLE 2.

This silver money will be coined strictly according to the disposition of the following laws: The coinage of national money from December 10, 1878; exchange of silver money coined on the basis of the law of November 30, 1873; coinage of small nickel and bronze change of February 26, 1904; and international money convention of December 11, 1865, with the exception that the year of coinage will be designated as 1915.

ARTICLE 3.

Expenses of coinage will be paid from benefits of the coinage and the difference will be left in the budget as extraordinary state revenue.

ARTICLE 4.

This law will have effect on the signature of same by the king.

ALEXANDER m. p.

December 20, 1914.
Kragujevatz.

SWITZERLAND.

Answers to interrogatories, 1914.

1. Gold and silver coinage during the year 1914:

Denomination.	Pieces.	Value.	
		Francs.	United States currency.
Gold (new coinage):			
20 francs, for account of the Swiss Confederation	100,000	2,000,000	$386,000
20 francs, for account of the Swiss National Bank	600,000	12,000,000	2,316,000
10 francs, for account of the Swiss Confederation	200,000	2,000,000	386,000
Total	900,000	16,000,000	3,088,000
Silver (new coinage):			
2 francs	1,000,000	2,000,000	386,000
1 franc	4,200 000	4,200,000	810,600
50 centimes	2,000,000	1,000,000	193,000
Total	7,200,000	7,200,000	1,389,600

2 (*a* and *b*) and 4. None.

(For reply to No. 3, see appendix to this report.)

5. Switzerland abstains, as a rule, from remelting coins of other countries.

6. At the present time there are no mines of precious metals in development in Switzerland.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1915:

Classification.	In Swiss National Bank.		In circulation.
	Francs.	Equivalent in United States currency.	
Gold coin	171,144,383.14	$33,030,865.95	[1]
Gold bullion	66,791,478.68	12,890,755.38	.....
Silver coin (5-franc pieces)	24,913,230.00	4,808,253.39	[1]
Total	262,849,091.82	50,729,874.72	.....

[1] The war having caused a great disturbance in the monetary circulation, we can not reply to this question, even by an approximate estimation.

NOTE.—We fail to have the information for replying to all the points under this interrogatory. We can only indicate the amount of gold coin and bullion and silver coin found in the coffers of the Swiss National Bank on December 31, 1914.

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Francs.	*Francs.*	*Francs.*
Swiss National Bank	452,043,945	.....	.....
Old banks of issue	3,845,050	.....	.....
Total	455,888,995 ($87,986,576)	237,935,862 ($45,921,621)	24,913,230 ($4,808,253)

9. Premium on gold during 1914: Exchange on Paris—Highest premium, 101.90; lowest premium, 99.60; average premium, 100.39.

10 and 11. Report of the financial department and custom duties for the year 1914.

Federal decree of August 3, 1914, authorizing the emission of bank notes of 5 francs.

Federal decree of July 30, 1914, concerning the emission of 20-franc bank notes and the legal value of notes of the Swiss National Bank.

Federal decree of August 14, 1914, concerning the emission as bank notes of temporary treasury notes of 5, 10, and 20 francs.

Federal decree of September 1, 1914, concerning the emission of bank notes at 40 francs by the Swiss National Bank.

12. Imports and exports of gold during the calendar year 1914:

ASIA.

BRITISH INDIA.

Answers to interrogatories, 1914.

1. Amount of silver coined during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Rupees.	United States currency.
Whole rupees	48,495,035	48,495,035	$15,712,391
Half rupees	3,558,308	1,779,154	576,446
Quarter rupees	9,981,050	2,495,262	808,465
Eighth rupees	12,092,687	1,511,585	489,754
Total	74,127,080	54,281,036	17,587,056

Of the above amount 29,787,379 rupees ($9,651,111) was new coinage, and 24,493,658 rupees ($7,935,945) was recoinage from native coins.

The face value of coins melted during the calendar year 1914 is 23,252,970.50 rupees ($7,533,962.44), and the amount of metal in fine ounces obtained therefrom is 7,833,257.9 ounces.

2 (*a*). Coinage executed for other governments during 1914:

Denomination.	Pieces.	Value.	
		Rupees.	United States currency.
Ceylon Government silver:			
50 cents	200,000	100,000	$32,400
25 cents	400,000	100,000	32,400
10 cents	2,000,000	200,000	64,800
Total	2,600,000	400,000	129,600
Straits Settlements (silver): 20 cents	191,802	118,396	38,360

2 (*b*). Coinage executed at foreign mints: British sovereigns and half sovereign. are legal tender to an unlimited extent in India and are imported in the regular courses

3. The Government of India possesses no data regarding the amount of gold and silver used in industrial arts.

4. There is no free coinage in India, and the Indian mints do not receive old bullion from the public for coinage.

5. There were no imports by sea from foreign countries during the calendar year 1914 of American gold coins into the maritime provinces of Bengal, Sind, and Madras, and the imports into the Presidency of Bombay were valued at $4,802, and those into the Province of Burma at 236,764 rupees ($76,712).

(For reply to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Location.	Gold coin.		Silver coin.		Silver bullion.	
	Pounds sterling.	United States currency.	Rupees.	United States currency.	Rupees.	United States currency.
In public treasuries	28,868	$140,486	49,222,925	$25,948,228	.....	.....
In mints	547,052	2,662,229	195,000	63,180	761,086	$246,592
In presidency banks	196,115	954,394	8,619,402	2,792,686	.....	.....
Paper-currency reserve	5,678,967	27,636,693	298,725,796	96,787,158	.....	.....
Gold-standard reserve	3,887,000	18,916,085	.....	.....	.....	.....

NOTE.—The Government of India does not possess accurate information about the amount of gold and silver coins in circulation in India.

8. Govrnment and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.		Gold holdings.		Legal-tender silver holdings (coin and bullion).	
	Rupees.	United States currency.	Rupees.	United States currency.	Rupees.	United States currency.
Government	608,327,990	$197,098,269	169,602,248	$54,951,128	298,725,796-6	$96,787,158

The amount of Government notes outstanding at the end of the year 1914 not covered by gold or silver coin and bullion was 139,999,945–10 rupees only ($45,359,982).

9. Premium on gold during 1914: The currency in largest use is the silver rupee. A considerable quantity of gold is also passed into circulation in some parts of the country in the form of sovereigns. These circulate at their legal tender rate of rs. 15/– equal to 1 sovereign. About the beginning of August, however, owing to special war conditions, all issues of gold from Government treasuries and currency offices were stopped and shortly after a premium appeared on gold sovereigns.

1. The last day when the soverei_n was quoted at rs. 15/– was on August 6, 1914. A premium of 2 annas appeared on August 7.

2. The highest premium reached was on October 7, 1914, when dragon sovereigns were selling at rs. 15–8–0.

3. The rate on the last day of the year 1914 was rs. 15–1–6.

10. No laws were passed during 1914 affecting the currency.

11. A copy of the mint report for the year 1913–14 is forwarded herewith.

12. Imports and exports of gold during the calendar year 1914:

BRITISH NORTH BORNEO.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 3, 4, 5, 6, 10, and 11. None. No mint.

7. Approximate stock of silver coin in the country on December 31, 1914, 156,000 Straits Settlements dollars ($31,111.10 United States currency).

8. Government notes outstanding at the end of the year 1914, 1,035,000 Straits Settlements dollars ($575,000 United States currency).

9. British North Borneo can not be said to have a system of currency. The Government is authorized to issue notes based on the value of the Singapore dollar (silver) which is worth $0.55+ in United States currency (gold); that is, $5 United States currency are worth $9 Singapore, and that value for exchange is in vogue in British West Borneo. The Singapore Government issues various silver coins, including the dollar and fractions thereof, but the British West Borneo Government issues no coins except the following:

Nickel—5-cent piece=0.0277+ United States currency; 2½-cent piece=0.0138+ United States currency; 1-cent piece=0.0055+ United States currency.

Copper—1-cent piece=0.0055+ United States currency; ½-cent piece=0.0027+ United States currency.

12(*b*). Silver coin imports during 1914: Straits dollars, 50,000=$27,777.77 United States currency, from Singapore, Straits Settlements.

CEYLON (COLOMBO).

Answers to interrogatories, 1914.

1, 2 (*a*), 4, 5, 6, 10, and 11. None. No mint in Ceylon.
2(*b*). Coinage (silver) executed at Calcutta mint:

Denomination.	Value.
50 cents, 25 cents, and 10 cents (Ceylon subsidiary silver coins)	*Rupees.* 400.000 ($137,600)

7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In public treasuries.	In circulation.
Gold coin	[1] £227,438 ($1,106,827)	*Rupees.* [2] 6,118,096 ($1,982,263)
Silver coin	*Rupees.* [3] 8,269,620 ($2,679,357)	.....

[1] Including £226,000 ($1,099,829) held on behalf of currency notes reserve.
[2] Circulation of Ceylon subsidiary silver coins, exclusive of subsidiary silver coins belonging to currency reserve and in the Kacharies.
[3] Including 8,078,200 rupees ($2,617,337) held on behalf of currency notes reserve.

8. Government notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	*Rupees.* 26,629,500 ($8,627,958)	*Rupees.* 9,420,836 ($3,062,351)	*Rupees.* 5,740,464 ($1,859,910)

9. There is no premium on gold. The actual currency of the country is the Indian rupee. (A sovereign is fixed at 15 rupees by a Government proclamation.)
12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.	Silver.			
	Imports.	Imports.		Exports.	
	Coin.	Coin.	Bullion.	Coin.	Bullion.

Total	2,263,950 ($734,425)	2,355,657 ($763,233)	511,187 ($185,064)	1,010,200 ($327,305)	11,000 ($3,564)

CHINA.

HONGKONG.

Answers to interrogatories, 1914.

1, 2 (*a*), 4, 5, 6, 10, 11, and 12 (*a*): None.

2 (*b*). British dollars coined at Bombay, British India.

7. Approximate stock of gold and silver in the country on December 31, 1914: The Hongkong colonial treasurer reports for 1914 as follows:

Approximate amount of Hongkong silver and copper subsidiary coins put into circulation	$43,999,830
Amount withdrawn and sold as bullion	$12,607,459
Approximate balance in circulation	$31,392,371
Silver coin and bullion (Hongkong currency)	$29,237,270.40
	(£11,188/10/0)
Gold coins (Hongkong value)	$605,000
Gold, silver, notes	£549 ($2,671.71)
Old Mexican	$92,000
Mexican dollars	$31,262
British dollars	$74,463
Canton subsidiary coins	121,850
American gold and notes	$271
American gold coins	$3,090
Gold marks	208
Gold guilders (florins)	10
Gold and notes (francs)	2,030
Gold notes (yen)	2,765.94
Silver chopped yens	1,087
Silver Philippine pesos	2,050

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Specie in reserve.
Banks of issue	[1] $30,862,727	[2] $23,300,000

[1] Hongkong currency.
[2] Includes sterling securities deposited with Crown agents in London valued at $1,850,000 Hongkong currency; also securities with the Crown agents, £68,040 ($331,116.66).

12 (*b*). The difference between the total amount of silver imported from America to Shanghai and the total amount of silver exported from San Francisco to China is chiefly accounted for by imports of silver into Hongkong, although a small portion has been continued to India.

AMOY DISTRICT.

Answers to interrogatories, 1914.

1, 2 (*a*), 4, 10, and 11. None. There is no mint in this consular district. The mint for the Fukien Province, of which Amoy is only a part, is at Foochow.

2 (*b*). Coinage for the Fukien Province is under the control of the finance bureau at Foochow.

3. No statistics for amount of gold and silver used in industrial arts, but amount extremely small and unimportant.

5. United States gold coin imported during 1914: Customs statistics showed nil.

6. No mines in this consular district.

7. Approximate stock of silver coin in the country on December 31, 1914:

Classification.	In public treasuries.[1]	In banks.	In circulation.
Gold coin	Nil.	Nil.	Nil.
Silver coin		[2] $25,000 [3] 249,000	[4]

[1] No public treasuries in this consular district.
[2] Carolius dollars held to cover note circulation.
[3] Japanese (Formosa) silver yen to partially cover Taiwan bank-note circulation.
[4] Unknown.

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Haikwan and Shanghai bank	$25,000	Nil.	$25,000
Taiwan bank	378,671	Nil.	249,000
Total	403,671	.....	274,000

9. No gold in circulation. The actual currency is miscellaneous silver dollars. Premium during 1914, Hongkong & Shanghai Banking Corporation average selling rate, demand drafts on New York: highest premium, 48; lowest premium, 40; average premium, 44.95.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.			Silver.		
	Imports.	Exports.		Imports.		Exports.
	Bullion.	Coin.	Bullion.	Coin.	Bullion.	Coin.

Total	.....	.....	39,829	2,750,494	.....	352,630
Grand total	6,922	5,730	111,358	4,335,021	746	1,241,663

NOTE.—Values given in United States currency.

CURRENCY IN USE IN AMOY, CHINA.

The currency of the port of Amoy is unique in China, being based on an obsolete coin commonly called the "Spanish dollar," which has been adopted by the Amoy agency of the Hongkong & Shanghai Banking Corporation as the unit for local exchanges. As this bank is by far the most powerful in this district, they have been able to maintain this book unit, which has been adopted by all the foreign firms doing business here and by the Chinese firms in their business relations with foreigners or foreign countries. Although at one time the Spanish or Carolius dollar was in circulation in this locality, it ceased to appear as a coin of exchange about 45 years ago and is now considered a curiosity in Amoy. The coins actually in use are known as "chopped yen," and consist of Mexican dollars, Hongkong dollars, and Japanese yen (based on silver and coined for use in Formosa), Indo-China piasters, and similar coins, which, if not mutilated by being "chopped" or stamped, are considered as of equal value for ordinary exchange purposes. In quantity they are treated according to weight and the number which will buy "Spanish dollars," the fictitious currency, is governed by the supply and demand, as an effort is made to maintain the Spanish dollar at par with Hongkong currency, and the fluctuations of the Spanish dollar are consequently governed by London gold exchange. The bank, however, reserves the right to refuse silver dollars by weight, accepting them only as single dollars at the rate which they have fixed for the relative value of Spanish dollars. The Spanish dollar is supposed to be equal to 72 candarines (72 per cent of a Canton tael, or 0.900 fineness of silver, but in actual transactions it is seldom considered by weight).

Although the silver dollar in current use is thus maintained at a normal value, the small silver coins and copper currency are depreciated and are subject to strong

fluctuations, the small silver coins being discounted at from 8 to 10 per cent and the copper coins from par to a discount of 30 per cent. The excess of gold or silver dollars in the market can be controlled by regulating the value of the Spanish dollar, although the average relative value keeps the Spanish dollar above the silver currency in circulation varying up to 2 per cent. Spanish currency has depreciated below the value of current silver coins as much as 3½ per cent, as in the year 1911. The Bank of Taiwan, which is a Japanese bank, keeps its accounts in silver, but recognize the Spanish dollar as the standard of the port, and the same applies to the Chinese banks.

CANTON PROVINCE.

Answers to interrogatories, 1914.

1. Coinage executed during the calendar year 1914:

Denomination.	Pieces.	Value.
Silver:		
20 cents	41,691,000	$8,338,200
10 cents	6,527,000	652,700
Total	48,218,000	8,990,900
Copper: 1 cent	14,750,000	147,500

2 (*a* and *b*), 4, 5, 7, 8, and 11. None.
6. No statistics whatever available.
9. There is no gold in circulation.
10. Translation of the national-currency law and of the detailed regulations covering the enforcement of the national-currency law inclosed.
12 (*a*). Imports and exports of gold: Nil.
12 (*b*). Imports and exports of silver during the calendar year 1914:

Country.	Imports.		Exports.	
	Coin.	Bullion.	Coin.	Bullion.
Abroad	$2,004,935	$3,484,821	$5,328,781	$23,851
China	2,702,917	372,400	960,998	3,500
Total	4,707,852	3,857,221	6,289,779	27,351

[Translation.]

National currency law.

1. The power to issue the national currency is exclusively vested in the Government.
2. The weight of pure silver in every dollar piece shall be 6 mace 4 candareens and 8 li, Government treasury scale.
3. The denominations of the national currency shall be as follows:
Silver: The dollar piece, the half-dollar piece, the 20-cent piece, the 10-cent piece.
Nickel: The 5-cent piece.
Copper: The 2-cent piece, the 1-cent piece, the 5-cash piece, the 2-cash piece, the 1-cash piece.
4. The national currency shall be based on the decimal system; that is to say, the 10-cent piece to be the tenth part of a dollar; the 1-cent piece to be the one-hundredth part of a dollar; and the 1-cash piece to be the one-thousandth part of a dollar. The system is to be observed both officially and privately in the conduct of exchanges.
5. The standard weight and fineness of the various coins shall be as under:
(1) The dollar piece, weighing 7 mace and 2 candareens, shall be 90 per cent pure silver and 10 per cent copper.
(2) The half-dollar piece, weighing 3 mace and 6 candareens, shall be 70 per cent pure silver and 30 per cent copper.

(3) The 20-cent piece, weighing 1 mace 4 candareens 4 li, shall be 70 per cent pure silver and 30 per cent copper.
(4) The 10-cent piece, weighing 7 candareens 2 li, shall be 70 per cent pure silver and 30 per cent copper.
(5) The 5-cent nickel piece, weighing 7 candareens, shall be 25 per cent nickel and 75 per cent copper.
(6) The 2-cent copper piece, weighing 2 mace 8 candareens, shall be 95 per cent copper, 4 per cent tin, and 1 per cent lead.
(7) The 1-cent copper piece, weighing 1 mace 7 candareens, shall be as above.
(8) The 5-cash copper piece, weighing 9 candareens, shall be as above.
(9) The 2-cash copper piece, weighing 4 candareens 5 li, shall be as above.
(10) The 1-cash copper piece, weighing 2 candareens 5 li, shall be as above.

6. No limit is fixed to the amount of legal tender in $1 pieces, which may be offered at one time; when, however, half-dollar pieces are tendered for payment, the amount is limited to $20 for each tender, and $5 is the maximum amount which may be legally tendered in 10 and 20 cent pieces, and $1 in nickel and copper pieces. This article does not apply to the payment and receipt of rent and exchange transaction by Government banks.

7. The forms of the different kinds of national currency are to be decided by presidential mandates.

8. The weight of every coin shall not vary from the standard fixed by the Government more than the three-thousandth part; and the total weight of every thousand pieces shall not vary from the standard weight by more than the three ten-thousandth part.

9. The fineness of the various coins of silver shall not vary more than the three-thousandth part from the standard fineness fixed by the Government.

10. Silver dollar pieces which, on account of ordinary wear and tear, shall have lost 1 per cent of the standard weight, and 50 cent pieces and those of lesser denomination, including nickel and copper coins, which shall have lost 5 per cent of the standard weight, may be exchanged for new ones from the Government.

11. No person shall be compelled to accept any currency which has been purposely defaced or destroyed.

12. Bullion tendered to the Government for coinage into $1 pieces shall be accepted by the Government, for which 6 li per dollar, Government weight, will be charged to defray the expense of coinage.

13. The above law shall be enforced on a day to be proclaimed by presidential mandate.

Detailed regulations governing the enforcement of the national currency law.

1. All receipts and disbursements of Government funds shall be made exclusively in the national currency, except as hereinafter otherwise provided.

2. All dollar pieces formerly issued by the various Government mints and which are in circulation will be redeemed by the Government in the national currency for purposes of recoinage, and until such a time as may be proclaimed by the President the Government may recognize the above as legal tender.

3. The Government will redeem in the national currency old silver subsidiary coins, copper coins, and copper cash which are now in circulation for the purpose of recoinage, and until such a time as may be fixed by the Government the same shall be accepted as legal tender by the business community. In the event of the above-mentioned currency being tendered in payment of Government fees, etc., the same shall be accepted according to the rate fixed and published for general information by the local officials at the various ports, such rate to be based on the average rate of the preceding month.

4. In calculating the value of bullion tendered in payment of Government fees, etc., or for coinage into national currency, the weight of 6 mace 5 candareens 4 li shall be taken as the equivalent of $1.

5. Government funds, which were formerly collected in accordance with the tael system, shall be received or paid in accordance with the table for conversions prescribed in article 5 of the national currency law. The various local officials shall continue to receive, as formerly, copper cents and copper cash, but shall report the same to the national tax bureau for conversion into the national currency.

6. All taxes and duties shall be collected according to articles 4 and 5 of the national currency law and the smallest denomination acceptable shall be the cash.

7. Private debts previously contracted according to the system of taels, subsidiary coins, copper pieces or other kinds of currency, shall be expressed in terms of the new currency at the rate prescribed by the national currency law; otherwise the

market rate on the day upon which this law shall be proclaimed shall be regarded as the Government rate in the event of litigation.

8. Under no circumstances will any person be permitted to refuse payment in the national currency of China within Chinese territory.

9. Any person who shall violate article 4 of the national currency law or article 8 of the detailed regulations governing the enforcement of the national currency law shall, on being prosecuted and convicted, be fined in a sum not less than $10 nor exceeding $1,000; and should any official or other person intrusted with the handling of Government funds be found guilty of the same offense he shall be fined in a sum not less than $50 nor exceeding $3,000.

10. The date on which this law shall come into force and the places to which it shall apply shall be decided by presidential mandate.

11. These regulations may be altered by separate mandate.

CHUNGKING PROVINCE.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
$1 (Szechuan)	6,906,241	$6,906,241
50 cents (Szechuan)[1]	26,200	13,100
Total	6,932,441	6,919,341

[1] China 50-cent piece is 3 mace 6 candareens.

The following copper coinage was executed by the mints in Szechuan during the year 1914: 200 cash, 13,788 pieces; 100 cash, 680,821 pieces; 50 cash, 81,468,510 pieces; 20 cash, 32,684,706 pieces; 10 cash, 11,250,000 pieces.

2 (*a*). Coinage (silver) executed for use in Tibet: Tibetan dollar (=7 mace 2 candareens), 1,460,860 pieces.

2 (*b*), 4, 5, 10, and 11. None.

6 and 7. Impossible to ascertain.

8. Regarding paper money, this Province has a satiety of irredeemable notes. These are called "military notes" and were first issued in November, 1911. The total amount of the official issues is said to be $14,400,000 (in military notes), in addition to a special issue of $1,346,000 for circulation in Chengtu alone. Besides these, there are many counterfeits in circulation, and there is evidence that there have been illicit issues, thus raising the amount in circulation, in the opinion of a close student of these matters, to probably $25,000,000. The present purchasing value of a $1 military note is the equivalent of $0.42 in silver. As far as I can learn there are no other Government or private bank notes in circulation.

The bank of China established branches in Chengtu and Chungking early this year. The manager of the local branch informs me that $90,000 (Mexican) in notes have been issued at Chengtu and $130,000 at Chungking.

9. Gold is only used in industrial arts. The rate of exchange between silver and cash continually fluctuates, but recently the average rate has been about 1,580 cash, equivalent to Mexican $1.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914 (through maritime customs):

Country.	Gold.	Silver.			
	Exports.	Imports.		Exports.	
	Bars and dust.	Coin.	Bullion.	Coin.	Bullion.
China:					
Ichang	[1] $119,999	[1] $11,631	.....	[1] $122,664	[1] $523,860
Wan Hsien	.....	.....	[1] $6,434	[1] 927	[1] 1,954
Total	[1] 119,999	[1] 11,631	[1] 6,434	[1] 123,591	[1] 525,814

[1] United States dollars. Rate of conversion: One Haikwan tael=United States $0.699.

FOOCHOW PROVINCE.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, 10, and 11. None.

6. No information concerning mines is obtainable. The provincial authorities know of no gold or silver mines at present in operation.

7. Approximate stock of gold and silver in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.	In circulation.
Gold coin	Nil.	Nil.	Nil.
Silver coin	.....	[1] $820,000	[1] $1,250,000
Silver bullion (estimated)	.....	[1] 300,000	[1] 250,000
Total	.....	[1] 1,120,000	[1] 1,500,000

[1] Mexican dollars.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	[1] $370,000	Nil.	[1] $200,000
Banks of issue	[1] 1,632,000	Nil.	[1] 510,000
Total	[1] 2,002,000	.....	[1] 710,000

[1] Mexican dollars.

9. Actual currency of the country: Chopped Mexican dollars (usually at a discount of about 1½ per cent over the Mexican dollar).

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	Bullion.	Bullion.	Coin and bullion.	Coin and bullion.
Shanghai (China)	$6,236	$46,336	[1] $1,870,971	[1] $1,438,600

[1] Silver figures include both bullion (sycee) and coins.

MUKDEN PROVINCE.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
Silver (new coinage), 20 cents	28,707,920	$5,741,584

2 (*a* and *b*), 4, 5, and 11. None.

(For reply to No. 3, see appendix to this report.)

6. Not ascertainable.

7. Approximate stock of silver coin in the country on December 31, 1914:

Classification.	In banks.	In circulation.
Gold coin	Nil.	Nil.
Gold bullion	Nil.	Nil.
Silver coin		[1] $27,182,968
Silver bullion	[2]	

[1] Total silver coin in banks and in circulation. [2] Unobtainable.

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Banks of issue	[1] $15,937,486	Nil.	[1] $6,151,889

[1] Silver coin.

9. There is no premium on gold. The actual currency of the Province is small coin, $1 equivalent to United States $0.34, and Haikwan taels, equivalent to United States $0.66.

10. No laws passed locally during 1914.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.	Silver.			
	Exports.	Imports.		Exports.	
	Coin.	Coin.	Bullion.	Coin.	Bullion.
China	*Haikwan taels.*[1] 28,488 ($19,930.20)	*Haikwan taels.*[1] 290,543 ($203,263.88)	*Haikwan taels.*[1] 3,162,977 ($2,212,818.71)	*Haikwan taels.*[1] 3,573,426 ($2,499,968.83)	*Haikwan taels.*[1] 2,131,754 ($1,491,375.10)

[1] Haikwan tael=United States $0.6996.

NANKING PROVINCE.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
$1 (Mexican)	2,785,000	$2,785,000
20 cents (Mexican)	32,000	6,400
10 cents (Mexican)	47,000	4,700
Total	2,864,000	2,796,100

2 (*a* and *b*), 4, 5, 6, 9, 10, 11, and 12 (*a*). None.

3 and 7. No available data.

8. No provincial notes.

NOTE.—Values are expressed in terms of gold dollars. (1 Haikwan tael=$0.6996.)

Currency conditions in Swatow.

[From Consul Myrl S. Myers.]

SWATOW, CHINA, *January 11, 1915.*

As the unsatisfactory currency conditions prevailing at Swatow have been emphasized and aggravated since the beginning of the war, it may be of interest to indicate in a general way the conditions obtaining here. The various currencies, fictitious and existent, may be enumerated as follows: Swatow tael, the local or 7-mace dollar, the

dragon dollar, the 7.2.7 dollar, subsidiary silver coins, and cash. To this list may be added the Haikwan or customs tael, but as it is not a business currency no further mention of it will be made.

The Swatow tael is the money of account of the native banks and larger shops, and is purely a fictitious or book currency. It serves as the basis of computation for local rates of exchange which are all quoted in terms of it. Its value is not subject to fluctuation. The theoretic weight of this tael is given as 994 li (a li is one-thousandth part of a Chinese ounce), which, reduced to grains at 583 to the tael, or Chinese ounce, gives it a weight of 579.5 grains. As regards purity, it is said that 112 Swatow taels is the equivalent of 100 taels of commercially pure silver, the tael weight being the same in both cases, which gives it a fineness of 0.893, 1,000 representing pure silver. Such being the case, the Swatow tael may be said to contain 517.49 grains of silver, commercially pure.

The local or 7-mace dollar, the equivalent of seven-tenths of a Swatow tael, is the currency of business among the Chinese. This currency is almost entirely in the form of notes issued by native banks (private), the denominations of which range between $1 and $100. These notes are redeemable in silver, and when silver is demanded of the bank of issue, current silver dollars and subsidiary coins are given at the exchange rate of the day. These banks, like so many private banks in China, are said to have large note issues, and consequently would be greatly imperiled by a continued demand for silver. Generally speaking, the value of the local dollar, as the tael, does not fluctuate. A few Kirin minted silver dollars are in circulation here, which are accepted as a 7-mace dollar.

The dragon dollar, otherwise known as the "chopped" dollar, or local Mexican, is the general designation given to the miscellaneous assortment of foreign silver dollars, as Mexican, Hongkong, silver yen, Straits Settlements, French piasters, Philippine pesos, etc., which are to be found in circulation at this port. Most of these dollars have had imprinted on them a mark or "chop" of one or more local firms by means of a steel die, and hence their designation "chopped" dollar. When very much "chopped," they circulate locally at a slight discount, but are never accepted beyond this district. The weight standard of these dollars is fixed at 7.2.3.2, in terms of the tael, and it is to this standard as a basis that the premium (these dollars are always at a premium on this standard) is added. This is not the dollar of foreign business, as might be expected; but nevertheless it forms the principal medium in its turnover, especially with other ports. The silver-yen notes of the local foreign bank and the notes of the newly established branch of the Bank of China constitute the paper of this currency. The rate of exchange of this currency is based upon Hongkong rates, but is said to be controlled entirely by local native bankers and their Hongkong connections.

The 7.2.7 dollar (the figures represent it in decimal terms of the tael) is the business dollar between foreign and Chinese firms, and consequently is the currency of foreign trade. This currency is not represented by any circulating medium, but is simply a money of account or book currency. Formerly this dollar corresponded in value to the dragon dollar, but this is no longer the case. The advantage of the book dollar is that it is free from the daily fluctuations of exchange to which all the actual or existent currencies are subject.

Of the other currencies little need be said. The value of the subsidiary silver coins, 10 and 20 cent pieces, fluctuates, and is usually at a discount ranging between 1 and 3 per cent, as cash, brass and copper, is still the principal currency of the people. Its value is subject to fluctuations, and at present is quoted at about 1,000 large pieces to the dragon dollar. Only a few copper cents are to be found in circulation, as they have never gained favor among the Chinese here.

In order to appreciate fully local currency conditions as related to foreign trade, reference must be made to the available banking facilities. As there are no facilities here for handling foreign exchange other than on Formosa and Japan, the banking business for most of the foreign trade naturally falls to Hongkong. The position of Hongkong as a center of distribution and clearing house for the trade of this district has frequently been remarked upon in previous reports.

Referring to the trade statistics of this port, it will be seen that imports greatly exceed exports, from which circumstances the inference of a considerable financial balance against it may be drawn. In 1913 the figures were as follows:

Foreign imports	$15,044,060
Native imports	13,354,361
Total	28,398,421
Exports to foreign countries and Hongkong	5,210,349
Exports to Chinese ports	4,442,880
Total	9,653,229

However, to offset this large trade debit there are the millions in remittances from Chinese emigrants to Siam and Malaysia. All these remittances, as well as the credits for exports to foreign countries, principally Siam and the Malay States, are drawn on Hongkong, where they are used to meet the debits for imports. As an indication of what these remittances amount to, it is variously estimated that from Bangkok alone between $14,000,000 and $18,000,000 was remitted to Hongkong for this district during 1913. These figures include payments for cargo, but that sum is comparatively unimportant, as the total exports to foreign countries amounted to only about $5,000,000, and consequently it must have been considerably less. Therefore, under normal conditions settlements between the two ports are readily arranged, and the dollar exchange in Hongkong is only at a small premium, usually ranging between 2 and 4 per cent, and the reason that the exchange goes so high is partly attributable to the fact of the local silver dollars being chopped.

Now, however, a different state of affairs exists. Since the beginning of the war the rate on Hongkong has gone up steadily and now stands at between 12 and 15 per cent premium. Locally no reason for this unwarrantable rate can be adduced. However, several obvious factors which tend to an appreciation of rates on Hongkong and make the present high rates possible are the following: A considerable depreciation in remittances to Hongkong for this district from Malaysia, due to a large decrease in emigration and to the return of thousands of emigrants (immigration into the Federated Malay States prohibited, but into Siam it is almost normal), with the resultant absence of credits; a glutted silver market in China; the fact that bank notes at Hongkong circulate at a premium over the Hongkong silver dollars; and the prohibition to the circulation of foreign coins in Hongkong, now in force about one year.

As to present developments in the local currency situation, instructions were recently received from Peking that all issues of private banks must be withdrawn by the end of the Chinese year, about the middle of February, to be replaced by the notes of the Bank of China. To this mandate the bankers have replied that the withdrawal of their notes in such a short time would greatly disarrange the local money market and cause embarrassment in business circles, and therefore compliance is impracticable. I am informed, however, that measures are being discussed which tend to show that the Government's final enforcement of this order is expected, the scheme under contemplation being the substitution of bank orders for the notes. Although the execution of the Government's proposal would tend to increase the stability of the local money market, no relief from present exchange conditions is suggested therein.

That this high exchange is having a depressing influence on business and is causing considerable embarrassment it is needless to remark. Its effect upon the trade of the port for 1914 is not so apparent as it will be on the trade for 1915, unless some measure of relief is soon afforded. At present it must be said there is no indication of any improvement in exchange conditions.

BRITISH BANK AIDS IN FLOATING CHINESE LOAN.

[American Minister Paul S. Reinsch, Peking, in Commerce and Trade Reports, June 17, 1915.]

An interesting feature in connection with the flotation of the $24,000,000 Chinese Government 6 per cent internal loan of 1915 is that the Hongkong & Shanghai Banking Corporation has agreed to act as one of the issuing and subscription agencies. Early last year, in talking over with the Minister of Finance possible methods for making an issue of domestic bonds attractive to Chinese investors, I suggested to him the feasibility of using the large foreign banks in China as issuing agents. By allotting certain revenues as guaranty for interest and amortization, and by giving the foreign bank a certain share in the auditing operations, greater security could be afforded, with the result of attracting idle funds held by Chinese.

A proposal of this kind was first made to the International Banking Corporation and the Chartered Bank of India, Australia, and China. As the former confines itself largely to exchange and commerical discounting business it did not express any interest in the proposal. The premier British bank has now taken up this system in a modified form. This action shows a desire on the part of the most important British interests here to assist the Chinese Government in the organization of its domestic public credit.

From the fiscal point of view the loan is somewhat anomalous in that, though it is a domestic loan, specific revenues are assigned as security—a procedure ordinarily confined to foreign loans. This feature is due to the Chinese Government's desire to give the domestic investor the same sense of security that the foreign investor possesses. A subscription price of 90 was stipulated in the Government's announcement of the bond issue.

CHOSEN (KOREA).

[By Consul General Ransford S. Miller, Seoul, Korea, in Supplement to Commerce and Trade Reports, June 16, 1915.]

NEW MINING LAW—GOLD MINING.

It is reported that a new mining law is being drafted by the authorities of the Government General, but little is known as to its nature, though it is generally understood that one of the new requirements will be that companies operating in Chosen under the mining law shall establish head offices in Chosen. The more important foreign mines, however, are operated under special concessions. Gold mines are the principal mines in Chosen, and of these the most important and productive are worked by foreigners. The total output of gold in Chosen during 1914 approximated $5,000,000, the mines worked by foreigners showing an increased output of some $500,000 over the preceding year, while those worked by Japanese and Koreans showed a decrease of something over $300,000.

Arrangements were completed between the Japanese holder of a large placer gold-mining concession in South Pyeng An Province and an Australian company for the working of this concession. The first year and a half will be spent in experimental tappings, after which extensive work will be undertaken. The same Australian company has recently purchased other placer fields in South Ham Kyong Province, with a view to working them at the same time; work in both cases to be started during the spring or early summer of 1915.

MOVEMENTS OF SPECIE AND BULLION.

The movements of specie and bullion during the year under review and the preceding year are indicated in the following table:

Items.	1913	1914	Increase (+) or decrease (−).
EXPORTS.			
Gold, coin and bullion	$4,966,312	$5,061,805	+$95,493
Silver, coin and bullion	483,806	328,803	−155,003
Total[1]	5,450,118	5,390,608	− 59,510
IMPORTS.			
Gold, coin and bullion	3,487	6,311	+ 2,824
Silver, coin and bullion	97,158	145,179	+ 48,022
Total	100,645	151,490	+ 50,846
Grand total	5,550,763	5,542,098	− 8,655

[1] Gold ore exported: 1913, $195,415; 1914, $283,717.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*). Coinage, in accordance with the coinage laws of the former Korean Government, has been suspended, the coins are being gradually withdrawn from circulation, and the system united with that in force in Japan. No coinage is now being carried on in Korea.

3. Gold and silver used in industrial arts: No official data available and no expert opinion obtainable.

4 and 5. Unknown.

(For reply to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.	Circulation (in markets).[1]
Gold coin	.....	[2] $796,196	$2,522
Gold bullion	.....	[3] 571,317	.....
Silver coin	$744,933	.....	2,504,110
Total	744,933	1,367,513	2,506,632

[1] As no distinction is made between market and bank circulation, the market circulation represents the total amount.
[2] Foreign coins in possession of the banks amounted to $72,204.
[3] No distinction is made between gold and silver bullion.

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Additional reserve.
Banks of issue	$10,881,484	$1,210,190	[1] $2,501,554

[1] In bank of Japan notes.

9, 10, and 11. None.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

TAIWAN (FORMOSA) AND KARAFUTO (JAPANESE SAGHALIEN).

BANKING AND COINAGE SYSTEM.[1]

Although there was at the time of the cession of Taiwan no organized system of monetary circulation in the island, yet on account of the smallness of transactions no great inconvenience was felt in the circulation of capital; but with the development of industry after the cession was recognized the necessity of establishing banks as organs of monetary circulation; consequently in 1899 the branch offices of the Thirty-fourth Bank of Osaka were established in the island, and in 1897–1899 the Bank of Taiwan, which may be called the central bank of the island, came into existence. In addition to its principal business the latter bank has made loans since 1905 as agents of the Hypothec Bank of Japan.

When Taiwan became a Japanese possession there came into circulation, in addition to the already complicated currency in use from former times, the notes of the Bank of Japan, the silver yen, and subsidiary coins, so that the coinage system of the island fell for a while into the wildest confusion. When the gold standard was adopted in October, 1897, in Japan proper, the Government, after careful consideration of the old usages of the island and its trade relations with the Chinese mainland, decided to allow for the time the circulation in Taiwan of silver coins calculated on a gold basis and to establish when opportunity offered the same system as in Japan proper; and in November of the same year the first official rate of exchange was published.

Thus the coinage system of Taiwan was that of gold monometallism, in which silver currency was used as substitute, and the Bank of Taiwan was permitted to issue

[1] From the Fourteenth Financial and Economic Annual of Japan, 1914.

bank notes convertible into silver yen by law No. 38, promulgated in April, 1897; but the frequent changes in the official price of the silver yen made the circulation of the bank notes extremely complicated, and the evil effect upon business transactions became so serious that it was considered necessary to reform the coinage system. Consequently, as a temporary measure to meet the emergency, an ordinance was promulgated in June, 1904, permitting the issue of gold notes by the Bank of Taiwan, which was carried into effect in the following month. In 1906 the law of the Bank of Taiwan was revised and the ordinance of 1904 abolished in June of the same year. And since the issue of gold notes their circulation has been going on very smoothly, and the abolition of the circulation of silver notes has further extended the use of gold notes. Moreover, it appears that the old custom which prevailed among the islanders of hoarding up their gold and silver is gradually disappearing and deposits in banks have in consequence somewhat increased.

Again, by the revision of the coinage law in April, 1906, and March, 1907, the weight of pure metal in the subsidiary silver coins was altered.

By an ordinance which was issued in October, 1908, the importation from Japan proper or abroad of silver yen and foreign silver coins exceeding in value 100 yen when converted into Japanese currency, and of foreign subsidiary coins and unrefined silver exceeding 3 yen in value, was prohibited, and a similar importation of silver yen and foreign silver coins, the aggregate value exceeding 100 yen, was also prohibited. Further, the payment of public dues in silver yen, which had been permitted in the island, was prohibited by ordinance No. 16 in the same month of the same year. Up to April, 1908, the government of Taiwan exchanged silver notes for gold notes; by ordinance No. 19 in the following December, however, the 31st of that month was proclaimed to be the last day for the use of silver notes, and December of the same year was fixed upon as the final day for the conversion of these notes. The amount of silver notes still in circulation on December, 31, 1909, which was fixed upon as the final day for the conversion of these notes, was about 23,000 yen (£2,356), and the Bank of Taiwan adjusted the matter on that day by deducting the above sum from the bank-note account.

On April 1, 1911, the coinage law came into force in the island and, as stated above, an ordinance was promulgated in June, 1904, permitting the Bank of Taiwan to issue gold notes. Since then the currency of the island has practically been on the basis of gold monometallism, and thus it has become uniform with the system in force in Japan proper.

PERSIA.

Answers to interrogatories, 1913.

1. Gold and silver coinage during the calendar year 1913:

Denomination.	Pieces.	Value.	
		Krans.	United States currency.
Gold:			
20 krans	358	7,160	$1,217.20
10 krans	20,355	203,550	34,603.50
4 krans	5,339	21,356	3,630.52
Total	26,052	232,066	39,451.22
Silver:			
5 krans	2,999,747	14,998,735	2,549,784.95
2 krans	47,055	94,110	15,998.70
1 kran	1,254,796	1,254,796	213,315.32
½ kran	627,398	313,699	53,328.83
¼ kran	156,848	39,212	6,666.04
Total	5,085,844	[1] 16,700,552	2,839,093.84

[1] Of which 7,842,476 krans were coined in 1913.

NOTE.—New coinage: Gold—145.4167 ounces (of different finenesses). Recoinage—gold, 85.4292 ounces (Turkish pounds, 0.916 fine); recoinage—gold, 898.7313 ounces (Russian rubles, 0.900 fine).
New coinage: Silver—1,059,021.653 ounces (of different finenesses), of which 1,038,764.761 ounces (0.999 fine) were imported from London. Recoinage (domestic): Silver, 271,365.254 ounces (0.870 fine); making a total of 1,330,386.907 ounces (used in coinage).

2 (*a*). No coinage was made for foreign governments.

2 (*b*). Coins of mixed metal and nickel are coined at Brussels. They are issued by the Imperial Bank of Persia.

4. Gold and silver returned from use in industrial arts to monetary use: Gold, none. Silver, various manufactured articles, 12,557.533 ounces; in dust, 7,699.358 ounces; total, 20,256.891 ounces.

5, 6, 9, 10, 11, and 12 (*a* and *b*). None.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914: Impossible to estimate. Exportation of silver coin is known to be large.

8. Government and bank notes outstanding at the end of the year 1914: No information available.

Answers to interrogatories, 1914.

1. Gold and silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Krans.	United States currency.
Gold:			
20 krans	7,765	155,300	$26,401
10 krans	34,893	348,930	59,318
4 krans	8,324	33,296	5,660
Total	50,982	[1] 537,526	91,379
Silver:			
5 krans	667,000	3,335,000	566,950
2 krans	10,926,347	21,852,694	3,714,958
1 kran	2,179,500	2,179,500	370,515
10 shais	560,000	280,000	47,600
5 shais	30,000	7,500	1,275
3 shais	10,172	1,526	259
Total	14,373,019	[2] 27,656,220	4,701,557

[1] More than one-half of this amount was from recoinage of foreign coins.

[2] Of which amount 25,016,882 krans ($4,252,870) was new coinage and 2,639,338 krans ($448,687) was from recoinage of native coins.

There were also manufactured at the mint at Teheran 25 gold and 23 silver medals.

2 (*a* and *b*), 3, 5, 6, 7, 8, 9, 10, 11, and 12. No replies.

4. Gold and silver returned from use in industrial arts to monetary use: Gold, 5,404.914 miscals=799.4772 ounces; silver, 132,832.000 miscals=19,648.0670 ounces.

SIAM.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Ticals.	United States currency.
Domestic recoinage	488,128	488,128	$181,095.49

2 (*a*), 4, 5, 10, and 11. None.

2 (*b*). Coinage executed at the Belgium mint: Nickel—10 satangs, 1,000,000 pieces; 5 satangs, 2,000,000 pieces. Bronze—1 satang, 1,000,000 pieces.

3. No information at disposal of Government.

6. No silver is produced in the mines of the country, while the amount of gold produced is so infinitesimal that it is not officially recorded.

7. Approximate stock of silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.		In banks.	In circulation.

AFRICA.

ABYSSINIA.

[By Consul General John Q. Wood, in Supplement to COMMERCE REPORTS, June 14, 1915.]

The French-Ethiopian Railroad statistics show that $1,153,868 of currency were imported during 1913 and $541,392 exported. The Bank of Abyssinia the same year bought foreign exchange valued at $1,538,800 and sold $1,409,000, thus losing $129,800 of its cash reserve. The rupee is used as the basis of all exchange. The currency transported over the French-Abyssinian Railroad in 1913 shows a gain in the coin circulation of $612,476 to pay off the trade balance in favor of Abyssinia of $1,180,000.

On account of the expense in procuring cash from the Bank of Abyssinia, several important firms import Maria Theresa thalers for their own account. It is reasonable to believe that the bank imported $300,000 in 1913, as the Bank of Egypt placed at its disposal $194,666. This would leave the sum of $312,476 to be imported by private merchants. In endeavoring to explain the trade balance of $1,180,000 in favor of Abyssinia in 1913 there remains the sum of $567,524 after deducting the net balance of silver coin imported. As most of the large business houses in Abyssinia are branches of firms in Aden, it is quite probable that the net profits in exchanging cottons for the Abyssinian products would account for this sum, the same being the difference between the declared value and selling prices of imported goods.

RATES OF INTEREST AND LOANS.

The interest rates vary from 10 per cent to 15 per cent per annum; upon ordinary overdrafts 12 per cent is charged. During 1913 the Bank of Abyssinia reduced its loans on merchandise to $319,311 (in 1912, $462,676); guaranteed loans on 265 accounts amounted to $218,943 in 1913, compared with 229 accounts of $339,631 in 1912. Transactions upon open accounts amounted to $300,000 in 1913, in comparison with $247,514 in 1912, with an increase in the number of accounts to 129 from 94. Open and deposit accounts together (319) in 1913 showed dealings valued at $395,570, compared with 330 valued at $383,390 in 1912.

CURRENCY IN CIRCULATION.

The Abyssinian Government has a mint at the capital, but at present it is not in operation. Its coinage of Menelik dollars and piasters are accepted in all parts of the Kingdom, but the Maria Theresa thaler, of the same value as the Menelik dollar, is more popular. The thaler's value changes with the price of silver, fluctuating between $0.50 and $0.47 during 1914. The piaster is much in demand in small trading, and although the intrinsic value is only one-sixteenth of an Abyssinian dollar, at times it is necessary to pay one dollar for 14 piasters on account of their scarcity. In some parts of the country bars of salt are still used as the medium of exchange, and blank cartridges are used everywhere for small specie. All of the Maria Theresa thalers are imported

from Austria, while at present the piasters are minted in France. Abyssinian bank notes were to be put in circulation the latter part of 1914.

In Jibuti the official money is French. The 5-franc piece and small coins are used, but the Indian rupee is preferred among the indigenous population. The notes issued by the Banque de l'Indo-China are also legal tender. A branch of this bank is located here in a fine building. Its principal activities are the financing of building and industrial enterprises in the French colony, acting as the financial agent of the colonial administration, and assisting in the successful financing of the French-Ethiopian Railroad. Most of the laborers along the construction line are paid off in these bank notes, and money changers traveling on the railroad do a thriving business at every station in taking up these notes in exchange for the Abyssinian silver currency, usually the Maria Theresa thaler.

EGYPT.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, and 9. None.
(For reply to No. 6, see appendix to this report.)

TRANSVAAL.

Answers to interrogatories, 1914.

1, 2 (*a*), and 4. There is no mint in operation in the Union of South Africa. The only mint is in Pretoria, but this has not been operative since the last Anglo-Boer War.
2 (*b*) and 5. None.
3. No information available.
(For reply to No. 6, see appendix to this report.)
7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In banks.	In circulation.
Gold coin	$26,215,714	[1] $12,166,250
Silver coin	2,630,309	[1] 8,516,375
Total	28,846,023	20,682,625

[1] These figures represent only a rough estimate.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.
Legal tender	$5,725,866
Other issues	5,727,432
Total	11,453,298

9. The currency of the Union is based on a gold standard.
10. Laws passed during 1914: Currency act No. 4 of 1914. (It was not found necessary to put any of the provisions of this act in force.)
11. The annual report of the government mining engineer will be forwarded later.
12 (*a*). Imports and exports of gold during the calendar year 1914:

Country.	Imports.		Exports.		
	Coin.	Bullion.	Coin.	Bullion.	Ore.
United Kingdom	$1,963,063	$2,088	$2,477	[1] $99,977,210	[2] $6,019
India			58,390

MADAGASCAR.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 4, 5, 9, 10, 11, and 12 (*a* and *b*). None. There is no mint in Madagascar; only the regular French coin is used.

(For reply to No. 3, see appendix to this report.)

(For reply to No. 6, see appendix to this report.)

7. Approximate stock of gold and silver coin in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.
Gold coin	$13,777.30	$9,650.00
Silver coin	2,451,191.31	1,408,900.00
Total	2,464,968.61	1,418,550.00

8. There are no local government or bank notes issued.

9. The currency of France is used in Madagascar.

MOROCCO.

Answers to interrogatories, 1914.

1. Silver coinage during the calendar year 1914:

Denomination.	Pieces.	Value.
		[1] *Hassani pesetas.*
Rials (dollars)	2,411,018	12,055,090
One-fourth rial	1,034,840	1,293,550
One-tenth rial	500,000	250,000
Total	3,945,858	[2] 13,598,640 ($2,719,728)

[1] One-fifth rial.

[2] Of the above total coinage, 12,305,090 Hassani pesetas was new coinage and 1,293,550 Hassani pesetas was from recoinage of domestic coins.

2 (*a*), 5, 6, 8, 10, and 11. None.
2 (*b*). All coinage is executed at the Paris mint. There is no mint in Morocco.
3, 4, and 7. Unknown.
9. Premium on gold during 1914: Highest premium, 39½ per cent; lowest premium, 24¼ per cent; average premium, 30 per cent. The actual currency of the country is Hassani silver.
12 (*a* and *b*). No statistics available.

ZANZIBAR.

Answers to interrogatories, 1914.

1, 2 (*a*), 4, 5, 6, 9, 10, and 11. None. There is no local mint.
2 (*b*). Statistics not available. The rupee of India is the monetary unit of British East Africa, including Uganda and Zanzibar. An increase in the volume of coin is usually met by importations of rupees from India.
3. No statistics available for gold and silver used in industrial arts. The amount, however, was practically nil.
12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914: Statistics not available.
(The American consul states that these questions were submitted to the treasurer of the protectorate at Nairobi, and in addition thereto the Official Gazette and local bank managers were consulted without success.)

AUSTRALIA.

SYDNEY (NEW SOUTH WALES).

Answers to interrogatories, 1914.

1. Gold coinage during the year 1914:[1]

Denomination.	Pieces.	Value.	
		Pounds.	United States currency.
Sovereigns	1,774,000	1,774,000	$8,633,171.00
Half sovereigns	322,000	161,000	783,506.50
Total	2,096,000	[1] 1,935,000	9,416,677.50

[1] Of the above total gold coinage, £1,934,287 ($9,413,207.68) was new coinage, and coins of the face value of £713 ($3,469.81), of the coinage value of £683 ($3,323.82), was from recoinage of domestic coins.

2 (*a*), 6, and 10. None.
2 (*b*). Australian silver and bronze coin is obtained from the royal mint, London.
(For reply to No. 3, see appendix to this report.)
4. Wrought gold is not accepted by the Sydney mint.
5. The Government statistician informs me that during the period of 18 months ended June 30, 1914, no gold coin of United States origin was imported into New South Wales.
7. As regards the stocks of gold and silver coin and bullion on December 31, 1914, the banks held on that date coin of all descriptions to the value of $72,973,872 and bullion to the value of $650,037.
8. On December 31, 1914, the banks held Australian notes to the value of $13,417,129, and had in circulation their own notes to the value of $491,778.
9. There is no premium on gold.
11. The annual report of the Sydney branch mint is incorporated in the report of the deputy master and comptroller of the royal mint, London.

[1] The statistical year in this State no longer corresponds to the calendar year, and it is therefore impossible to get full calendar year statistics for 1914 at the present time.

Imports into and exports from New South Wales of gold and silver bullion, specie, etc., during the six months ended June 30, 1914.

IMPORTS.

Country.	Gold.			Silver.		
	Bullion.	Specie.	Ores and concentrates.	Bullion.	Specie.	Ores and concentrates.

MELBOURNE, VICTORIA.

Answers to interrogatories, 1914.

1. Gold coinage during the calendar year 1914:

Denomination.	Pieces.	Value.	
		Pounds.	United States currency.
Sovereigns (pounds sterling)	2,012,029	[1] 2,012,029	$9,791,539

[1] Of this gold coinage £2,011,915 ($9,790,984) was new coinage, and £114 ($555) was from the recoinage of domestic coins, containing 26.83 ounces of fine gold. The amount of foreign coins melted was too insignificant to record.

No silver coin was executed here, the Australian Commonwealth silver coin being imported from London, details of which will be found in the London mint returns. The issues in the State of Victoria for 1914 from the Commonwealth treasury, under whose control this lies, have been returned as enumerated in reply to interrogatory 2 (*b*). British silver coin of the face value of £70,149 ($341,380) was withdrawn from circulation.

2 (*a*) and 9. None.

2 (*b*). Coined at Royal mint, London:

Denomination.	Pieces.	Value.
2 shillings	48,500	£4,850
1 shilling	42,500	2,125
Sixpence	4,800	150
Threepence	4,750	59
Total	100,550	7,184 ($34,961)

(For reply to No. 3 see appendix to this report.)

4. Gold and silver returned from use in the industrial arts deposited at the mint for coinage during 1914:

Description.	Gold.	Silver.
Old jewelry, jeweler's filings, and material which had been previously wrought here, containing	*Fine ozs.* [1] 3,320	None.

[1] Weighing 8,813 ounces, gross.

5. United States gold coin imported during 1914: Approximately $1,000, brought by travelers. Amount melted at mint too insignificant to record.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In public treasuries.	In banks.	In circulation.
Gold coin	[1] £8,070,427 ($39,274,733)	[2] £9,660,467 ($47,012,663)	[3]
Gold bullion	[4] £29,362 ($142,890)	[5] £20,087 ($97,753)	[3]
Silver coin			
Silver bullion	£570 ($2,774)		
Total	8,100,359 ($39,420,397)	9,680,554 ($47,110,416)	

[1] Includes £8,013,427 ($38,997,343), held by the Australian Commonwealth treasury against its note issue of £20,256,318 ($98,577,372), being a percentage of 39.555, and £57,000 ($277,391) held by Melbourne mint.
[2] £8,694,186 ($42,310,256) held by private banks, including silver coin, of which no record is kept by such banks; £146,740 ($714,110) held by Victorian Government State savings banks; and £819,541 ($3,988,296) held by the Commonwealth Government Bank.
[3] No statistics available, but officially estimated at 10 shillings per head of population of 1,430,878, or £715,439 ($3,481,684).
[4] Held by Melbourne mint.
[5] Held by Victorian State Government banks and Commonwealth Government Bank.

8. Government and bank notes outstanding at the end of the year 1914:

Designation.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	[1] £20,256,318 ($98,577,372)	£8,013,427 ($38,997,343)	None.
Banks of issue	109,476 ($532,765)	109,476 ($532,765)	None.
Total	20,365,794 ($99,110,137)	8,122,903 ($39,530,108)	

[1] Total Government notes outstanding in the whole of Australia; those in the State of Victoria alone can not be given.

10. Laws passed during 1914 affecting the currency:
Act No. 23, of 1914, to amend section 6 of the Australian notes act, 1910–1911 (assented to Dec. 21, 1914).
Act No. 24, of 1914, to amend the Commonwealth Bank act, 1911 (assented to Dec. 21, 1914).
Act No. 33, of 1914, to authorize the issue of treasury bills (assented to Dec. 21, 1914).
12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.			Silver.				
	Imports.	Exports.		Imports.			Exports.	
	Bullion.	Coin.	Ore.	Coin.	Bullion.	Coin.	Bullion.	Ore.
United Kingdom	.....	£2,209	£1,298	£136,216	£3,156	£10,500	£14,654	£787

TASMANIA.

Answers to interrogatories, 1914.

1 and 2 (*a* and *b*). The mint for Australia is located at Melbourne; the report from there should be ample. No money coined in Tasmania.
3. No official data. Amount used too small to be considered.
4. No figures available here; amount, if any, very small.
5, 7, 8, and 10. No statistics available for Tasmania.
(For reply to No. 6, see appendix to this report.)
9. The actual currency of the State is gold, which is at par.
11. The report of the mint will be sent from Melbourne, where the mint is located.
12 (*a*). No gold imported. Amount of gold exported $6,813 to Ellice Island, United Kingdom.
12. No imports or exports of silver.

NEW ZEALAND.

Answers to interrogatories, 1914.

1, 2 (*a* and *b*), 3, 4, 5, and 9. None.
(For reply to No. 6, see appendix to this report.)
7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1914:

Classification.	In banks.	
	Pounds.	United States currency.
Gold and silver coins and other coined metals	5,820,899/6/0	$28,327,405
Gold and silver bullion	394,891/7/3	1,921,738

8. Bank notes outstanding at the end of the year 1914:

Designation.	Notes in circulation.
Banks of issue	£2,614,231/8/11 ($12,722,155)

9. There is no premium on gold.

10. Laws passed during 1914 affecting the currency or banking: An act to amend the banking act, 1908, enacted August 5, 1914; also an act enacted August 7, 1914; three proclamations, dated August 5, September 4, and October 5, 1914, declaring notes of certain banks to be legal tender; an order in council issuing additional regulations under the war regulations, October, 1914; and a proclamation declaring notes of certain banks to be a legal tender for a further period.

11. A copy of the report made to Parliament by Hon. W. Fraser, minister of mines, forwarded.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1914:

Country.	Gold.				Silver.			
	Imports.	Exports.			Imports.		Exports.

Total	674,099 ($3,280,503)	7,522 ($36,606)	859,178 ($4,181,190)	36,275 ($176,532)	34,000 ($165,461)	314 ($1,528)	58,906 ($286,666)	3,179 ($15,471)

PART II.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION OF THE PRECIOUS METALS IN THE UNITED STATES DURING CALENDAR YEAR 1914.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1914.

The official estimate upon the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvas in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1914 is estimated to have been $94,531,800, and the production of silver is estimated at 72,455,100 fine ounces.

The output of gold in the United States, including its outlying territories in 1914, exceeded that of 1913 by $5,647,400. Of this excess $1,300,000 was from Alaska, nearly $1,800,000 from Colorado, and $1,000,000 from California. Gains and losses on other sections were unimportant.

The construction of a Government railway into Alaska is looked forward to as a step likely to have great influence upon future developments in that Territory. Otherwise there is nothing in sight upon which to base a prediction as to an expansion or falling off of mining operations except that the effect of the European war in controlling copper and lead production will have the incidental effect of reducing the yield of gold and silver from copper and lead ores.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

The certainty of railway connection with the Yukon Basin and the probability of an early opening of the coal fields greatly stimulated the development of and search for gold deposits in Alaska during 1914.

Lode mining in the Juneau gold belt continues to overshadow all other lode operations in the magnitude of the plants either operated or being installed. There was also much development work done on gold and copper ores in the Prince William Sound region. The Willow Creek lode district had a very prosperous season, though the plants thus far built are small. There is every promise that the output from both copper and gold lode mines will be greater in 1915 than it was in 1914.

Less evidence of lasting prosperity was shown by the placer-mining industry. There was indeed an increased output of gold from the Ruby, Hot Springs, and Seward Peninsula districts and from smaller districts. In the first two the increase was due to the exploitation

of bonanza placers that in themselves do not necessarily give promise of large operations. The Fairbanks placer gold production is gradually declining, nor is it likely that permanent inprovement of placer-mining industry in this field will take place until lower operating costs are brought about by improved methods and by cheaper fuel and transportation. On the other hand, there was an increase of gold dredging on Seward Peninsula, and in other placer districts there was much prospecting of dredging ground.

The discovery of two new districts believed to carry placer gold caused some excitement in 1914. One lies in the headwater region of Tolovana, where the prospecting so far done has given encouragement to the miner. The other is in the lower Healy River Basin, where, although some placers appear to have been found, the outlook for any considerable mining is reported to be not encouraging.

The value of the gold produced in Alaska in 1914 is estimated at $15,764,259 and of the silver at $218,327.

In 1914 about 32 per cent of the total gold production came from lode mines, compared with 31.6 of gold output credited to lode mines in 1913. In 1912 it was 29 per cent of the total. This indicates a gradual transition from placer to lode mining.

Alaska's auriferous lode mines produced during the year gold valued at $4,863,028, compared with an output of gold valued at $4,814,813 in 1913. These mines made an output of 28,254 fine ounces of silver in 1914, and of 30,897 ounces in 1913.

Twenty-eight gold lode mines, including several properties which made only small outputs, were operated the whole or a part of the year 1914 in Alaska—two less than in 1913. Work was also done on many gold prospects, some of which produced a little gold. Of the producing mines 9 were in southeastern Alaska, 8 on Prince William Sound, 4 in Kenai Peninsula, 3 in the Willow Creek district, and 4 in the Fairbanks district. It is estimated that these mines had an output of 1,738,127 tons of ore, compared with 1,614,506 tons in 1913. In 1913 the average value of the gold and silver content for all the ores mined was $2.99 a ton; the average for 1914 was $2.80.

There were 144,625 fine ounces of gold and 18,062 fine ounces of silver recovered by amalgamation, and 90,363 ounces of gold and 9,561 ounces of silver recovered by cyanidation in 1914.

The value of the placer gold produced in 1914 is estimated at $10,730,000; that of 1913 was $10,680,000. As compared with 1913 there was a decrease in the placer gold output from Fairbanks, Koyukuk, and Fortymile districts, and an increase from Ruby and Seward Peninsula districts, as well as from some of the smaller camps. It is estimated that about 730 placer mines were operated in 1914—many for only a part of the season—compared with 700 in 1913.

Forty-two [1] gold dredges were operated for the whole or a part of the mining season in 1914. Of these 39 were located on the Seward Peninsula, 2 in the Iditarod district, and 1 in the Fairbanks district. It is estimated that these dredges handled 4,450,000 cubic yards, and made a gold recovery of $2,350,000. The average gold content per cubic yard of the gravels mined is 50 cents. In 1913 there were 36 gold dredges operated, which handled about 4,100,000 cubic yards, having a value of $2,200,000.

[1] Not including a tin dredge in York district, Seward Peninsula.

Some attempts at gold dredging were made in Alaska as early as 1900. This form of mining did not, however, reach a profitable stage until about 1903, when two small dredges were successfully operated in the Seward Peninsula. In 1907 a dredge was installed in the Fortymile district, the first in the Alaska Yukon. Up to the close of 1914 gold to the value of $10,100,894 had been mined in Alaska by dredges.

Deposits of bullion at the mints and assay offices credited to Alaska, calendar year 1914.

Locality.	Gold.		Silver, fine ounces.

Total	534,640.886	11,052,006.88	71,014.32

ARIZONA.

The mine production of both gold and silver in Arizona increased in 1914.

The gold output amounted to $4,179,155—an increase of $155,244. Of this over $3,000,000 was derived from siliceous ores—an increase of over $400,000. The quantity of gold recovered from copper ores in 1914 was $1,051,014, or nearly $300,000 less than in 1913. The output of placer gold was approximately $30,000.

The largest production of gold was from Mohave County, which showed a small increase. Cochise, Yavapai, and Maricopa Counties yielded most of the remainder of the output of gold.

Gold from ores amalgamated amounted to $259,063, and from ores cyanided $2,157,080.

The concentrates shipped, which were mainly copper concentrates, contained nearly $320,000 in gold, and the crude ores shipped to smelters about $1,410,000.

The silver output was nearly 4,400,000 ounces, an increase of more than 400,000 ounces. Of the 1914 production of silver 60 per cent was derived from copper ores, 26 per cent from siliceous ores, and 11 per cent from lead ores.

The largest part of the silver, or 75 per cent, was from crude ores shipped to smelters. Concentrates contained less than 10 per cent,

and bullion from gold and silver mills 14 per cent. The most notable change was the largely increased yield of the silver derived from gold and silver ores treated by cyanidation.

Cochise County produced 63 per cent of the silver and Yavapai County 18 per cent. The yield of no other county in Arizona exceeded 300,000 ounces.

In 1914, as in 1913, the Tom Reed, Gold Road, and Vulture mines were the largest producers of gold. Copper ores were the principal sources of the silver, but the yield of silver from siliceous ores was much larger in 1914 than it was in 1913. One of the most prominent of the producers of silver from siliceous ore was the Commonwealth mine in Cochise County. If the output of copper ores had not been reduced during the last half of 1914 the increase of gold and silver would have been greater than it was.

The average value per ton of the gold and silver recovered from copper ores in 1914 was 33 cents, and the average recovery per ton from siliceous ores was $8.46.

CALIFORNIA.

The total yield of mine gold in California in 1914 was $20,653,496, an increase of $246,338 over that of 1913. With the exception of one year (1883) the mine gold output of the State in 1914 was higher than it has been since 1864—50 years ago.

In 1914 there were 658 properties reporting production, of which 318 were deep mines and 340 placers. The producing deep mines may be classified by metal product as follows: Gold, 277; copper, 19; silver, 7; silver-lead, 6; and lead, 9. Of the placer mines 105 were hydraulic, 60 dredges, 70 drift, and 105 sluicing or surface placer mines.

The siliceous ore yielded an average per ton in gold and silver of $5.52; the copper ore, $1.84; the silver ore, $81.86; the silver-lead ore, $17.03; and the lead ore, $15.88. The average per ton in gold and silver from all ores treated in the State in 1914 was $5.02.

In 1914 there were treated in gold and silver mills in California 1,993,821 tons of ore, containing altogether $10,743,207 in gold and $91,327 in silver. This gives a total value of $10,834,534 in gold and silver, or an average per ton of $5.44 in both metals. From this ore was derived 46,072 tons of concentrates, which yielded in gold and silver $2,197,205, or an average of $47.69 per ton.

The 340 productive placers in California yielded $9,080,849 in gold and $19,287 in silver, a total of $9,100,136, which is an increase of $242,590 from this source over the yield of 1913. The dredge yield fell off $306,900 in gold, but there was an increase in total output from the hydraulic, drift, and surface placers of $551,572 in gold, or $244,672 more than the decrease in the dredge yield. Of the total placer gold the 60 dredges yielded 86 per cent; the 105 hydraulic mines, 8 per cent; the 70 drift mines, 3 per cent; and the 105 surface or sluicing mines, 3 per cent. The dredges in the State produced 38 per cent of the total gold yield from all sources. The placers produced 44 per cent of the total gold yield, for 1914, and the deep mines 56 per cent. These average percentages have changed very slightly for several years past. There are now 60 gold dredges operating in the State, and since the commencement of dredging in Cali-

fornia in 1898, the total gold yield from this source to the end of 1914 has been more than $71,300,000. The three principal dredging fields in the State are at and near Marysville, Yuba County, with a dredge gold yield in 1914 of $2,755,734; at and near Oroville, Butte County, with a yield in 1914 of $1,637,515; and at Folsom, Sacramento County, with a yield in 1914 of $2,161,653. Dredges are also in operation in the counties of Calaveras, Merced, Placer, Shasta, Siskiyou, Stanislaus, and Trinity.

Of the 30 counties producing gold in California in 1914, 7 yielded over $1,000,000 each, as follows: Nevada, Amador, Yuba, Sacramento, Butte, Calaveras, and Shasta. The leading gold-producing county in the State in 1914 was Nevada County with a gold output of more than $3,300,000. The leading hydraulic-mining county was Trinity; the county producing the greatest amount of gold from drift mines was Placer; and the leading dredge-mining county was Yuba.

Of the total ore milled in California from deep mines, 1,243,529 tons, or 62 per cent, came from the mines in the five Mother Lode counties of Amador, Calaveras, El Dorado, Mariposa, and Tuolumne. This ore yielded, on an average, in gold and silver, $5,075,552, or $4.08 per ton.

The mine production of silver in California in 1914 was 1,471,859 fine ounces, valued at $813,938. Of this 1,436,982 ounces was won by deep mining. The larger part of the output, 1,267,752 ounces, was derived from crude smelting ore. The greatest output was made as usual by Shasta County, where the yield from the smelting of copper ores was 592,727 ounces; from siliceous ore, 33,220 ounces; and from placers, 1,007 ounces; a total for the county of 626,954 ounces, valued at $346,706. Inyo County follows Shasta in the production of silver, with an output of 466,575 ounces, mainly from silver ores and silver-lead ores. There were 7 silver mines worked in the State in 1914—more than in many years. The 6 silver-lead mines in the State produced 448,054 ounces. Only a small amount of silver (34,877 ounces) was obtained with the placer gold of the State.

The two largest gold-producing deep-mine camps in the State are Grass Valley (including Nevada City), and Jackson (including Sutter Creek), in Amador County, and it is the productiveness of these two districts that gives Nevada and Amador first and second rank, respectively, in the quantity and value of gold produced in 1914. The largest gold-producing mines on the Mother Lode are in the Jackson district, where the 387,602 tons of ore were treated in 1914, yielding an average of $5.48 per ton. In the Grass Valley and Nevada City districts, 267,618 tons of ore were treated, yielding an average of $11.30 per ton in gold and silver.

COLORADO.

Colorado mines during 1914 produced $19,883,105 in gold and 8,796,065 ounces of silver, compared with $18,146,916 in gold and 9,325,255 ounces of silver in 1913. This shows an increase of $1,736,189 in gold and a decrease of 529,190 ounces in silver.

The Globe, Leadville, Pueblo, Durango, and Salida smelters were operated continuously on ore from British Columbia, Canada, Colo-

rado, Idaho, South Dakota, and other States, including a considerable tonnage of zinc residues from Kansas and Oklahoma zinc smelters. The copper-matting plant at Ouray was operated steadily during the year and construction work on a 200-ton addition to the plant was completed early in 1915. Cyanide precipitates and copper ore were shipped to Omaha and copper ore and copper matte were shipped to Utah plants.

Cripple Creek produced 60 per cent of the total gold yield of the State, with a yield of $11,996,116, as compared with $10,905,003 in 1913. This is the largest production for any one year since 1908. Cripple Creek, to the end of 1914, has produced $258,786,653 in gold. The Roosevelt Tunnel continued to lower the water level gradually, except in the Vindicator and Golden Cycle mines, where electric pumps, installed in 1913, are used. In July, 1914, preparations were completed for continuing the tunnel to the Vindicator-Golden Cycle territory—an addition of 10,250 feet—and from August 3 to November 4, when the El Paso plant was destroyed by fire and the work in the tunnel stopped, the heading had been advanced 270 feet. Work was resumed March 2, 1915.

The Golden Cycle and Portland cyanidation mills at Colorado Springs were operated steadily with a considerably increased output. Cyanide mills in the district also made an increased yield. The Union cyanidation plant at Florence and the United States Reduction & Refining Co.'s chlorination and cyanidation plants at Colorado City were idle. An attempt was made to cyanide the old dump of the Metallic Co. at Florence. The tonnage of concentrates and smelting ore from Cripple Creek increased appreciably.

Lake County (chiefly from Leadville, but also from the Lackawanna Gulch and St. Kevin districts) produced $1,571,451 in gold and 3,810,830 ounces of silver, against $1,023,631 in gold and 3,400,318 ounces of silver in 1913.

Lake County (including Leadville placers and deep mines, placers on Arkansas River and tributaries included in Lake County, deep mines of St. Kevin and Lackawanna Gulch districts) has produced, from 1860 to 1914, $6,165,905 placer gold, $36,640,591 lode gold, and 215,212,688 ounces of silver, with a commercial value of $176,628,520.

The San Juan region of Dolores, La Plata, Ouray, San Juan, and San Miguel Counties produced, $3,969,857 in gold and 2,515,437 ounces of silver in 1914, compared with $4,071,683 in gold and 2,769,077 ounces of silver in 1913.

There was an increase in gold of $252,616 in Ouray County, but decreases of $186,393 in La Plata, $149,135 in San Juan, $14,455 in San Miguel, and $4,459 in Dolores. There were increases for silver of 229,365 ounces in San Miguel and 56,655 ounces in Ouray, but decreases of 386,492 ounces in San Juan, 92,290 ounces in Dolores, and of 60,878 ounces in La Plata. Ouray County, because of increased production at the Camp Bird, the steady production of the Wanakah mill and copper matting plant, and the successful application of flotation to the Atlas ores, showed appreciable increases for gold, silver, and copper, and a small decrease for lead.

The output of placer gold from dredges and other placer operations at Breckenridge, Summit County, was $608,567, as compared with $386,196 in 1913, and the yield of considerable high-grade ore from pocket mines at Breckenridge and the gold in smelting ore and con-

centrates from Kokomo, Breckenridge, and Montezuma, gave a total yield of gold for the county of $668,610, as against $462,228 in 1913.

The number of mines producing metals in 1914 was 866, of which 36 were placers, as against 858 mines, of which 29 were placers, in 1913.

In 1914 there were sold or treated 2,677,526 short tons (mostly dry weight) of ore mined in Colorado, a decrease of 57,340 tons from the output of 1913. Of this total, 1,645,640 short tons (mostly dry weight) went to gold and silver mills, 363,743 tons (mostly dry weight) went to mills for concentration only, and 668,143 dry tons went crude to smelters; 188,770 dry tons of concentrates also went to smelters.

CENTRAL STATES.

The production of silver in the Central States in 1914 was 482,983 fine ounces, valued at $267,089, as compared with 335,634 fine ounces, valued at $202,723, in 1913. Nearly all the silver that is produced in the Central States is recovered incidentally to the production of other metals. Of the 1914 production, 413,500 ounces came from the copper lodes of Michigan, an increase of 118,327 ounces, resulting from a much larger copper output. About 25 per cent of the concentrates from lead ores mined in southeastern Missouri were desilverized and yielded nearly all the production of silver from that State recovered in 1914; a small output of silver was also derived from copper ore, and the total recovery from Missouri amounted to 61,168 ounces. A few ounces of silver were also obtained in 1914 from copper ore shipped from Lafayette County in Wisconsin.

The lead-zinc-fluorspar deposits of the Kentucky-Illinois field also carry silver, and from the lead concentrates derived from Illinois 2,112 ounces of silver were recovered, a decrease of 1,429 ounces. The only productive silver mine in the Central States in 1914 was one near Byars, in McClain County, Okla., which produced ore that yielded 6,187 ounces of silver, valued at $3,421.

IDAHO.

In 1914 there was a notable increase and a record production of silver in Idaho, but a decrease in that of gold.

The production of gold decreased from $1,344,559 in 1913 to $1,152,315 in 1914, or $192,244. The gold output from placers was valued at $700,454; that from deep mines at $451,861. Of the placer gold, 80 per cent was produced by dredging. Boise County led in gold output with $601,227, and Lemhi County followed with $305,991. These are the counties in which most of the dredging is done. The total gold recovered in Idaho by dredging for the period 1897 to 1914, inclusive, is estimated to have been more than $2,900,000, of which more than half has been recovered during the the last three years. The gold output from mill bullion by amalgamation and cyanidation was 12,284 ounces, from concentrates 3,168 ounces, and from crude ore smelted 6,406 ounces. Siliceous ores supplied 31 per cent of the gold, copper ores 2 per cent, lead ores 4 per cent, and lead-zinc ores slightly more than 1 per cent.

A record production of silver increased the figures from 9,989,193 ounces, valued at $6,033,473 in 1913 to 12,479,516 ounces, valued

at $6,901,172, in 1914. This increase of 25 per cent was credited almost entirely to the Coeur d'Alene region. Concentrates supplied 8,845,309 ounces of silver, crude ore 3,612,369 ounces, and mill bullion only 14,767 ounces. Nearly 70 per cent of the silver came from lead ores, 28 per cent from lead-zinc ores, less than 2 per cent from copper ores, and only 39,002 ounces from siliceous ores. Shoshone County produced 97.59 per cent of the total. The Hunter district, at Mullan, supplied 1,057,347 ounces; the Lelande district, at Burke and Mace, 5,565,372 ounces; and the Yreka district, at Wardner, 4,887,926 ounces.

There were 386 producing mines in Idaho in 1914, against 384 in 1913. Of these, 176 were deep mines and 210 were placers. Ore sold or treated in 1914 aggregated 2,235,349 tons, against 2,451,592 tons in 1913. Of the total, 2,066,361 tons were concentrated, making 303,046 tons of concentrates. Only 34,861 tons was treated by gold and silver mills; 130,512 tons were crude ore smelted. Most of the material was smelted outside the State, as but one smelter was operated—that at Clayton, in Custer County.

MONTANA.

Montana's mine yield of gold, silver, copper, lead, and zinc in 1914 was valued at nearly $48,000,000, against $61,900,000 in 1913. The decrease was due principally to the curtailment of the copper output caused by the European war, which affected prices and the State production.

The gold produced in Montana from placers and from ores in 1914 was valued at $4,117,911, against $3,493,432 in 1913. Of the gold produced, 61.04 per cent was obtained from dry or siliceous ores. The placers yielded 22.88 per cent and the copper ores yielded 12.76 per cent. The value of the placer gold produced in 1914 was $942,217, of which more than $835,000 was obtained by the operation of five large dredging machines. The gold from placers in 1914 was about $140,000 greater than in 1913 and that obtained from deep or lode mines increased $483,000. Cyanidation and amalgamation mills produced bullion containing nearly $820,000 in gold; concentrates recovered at concentration mills produced $553,400; and crude ore shipped to smelters contained $1,802,850.

The production of silver in Montana in 1914 was approximately 12,000,000 ounces, a decrease of 1,800,000 ounces. Of the total yield of silver in 1914 over 66 per cent came from copper ores and 10 per cent came from dry or siliceous ores. The decrease of silver from copper ores was over 2,000,000 ounces. Cyanidation and amalgamation mills yielded bullion containing about 1 per cent of the silver; concentration mills produced concentrates containing 69 per cent; and crude ore shipped to smelters contained 29 per cent. Silver Bow County produced 87.47 per cent of the silver produced in 1914 against about 90 per cent in 1913.

The ore producers in Montana numbered 358 in 1914 against 431 in 1913, and the number of producers of placer gold was 147 against 128 in 1913. The total quantity of ore mined and treated was 5,128,956 tons, of which 4,346,034 tons were copper ores, yielding an average value in gold and silver of $1.14 per ton.

The siliceous ores treated amounted to 342,085 tons, averaging $9.37 per ton in gold and silver.

The lead and lead-zinc ores contained very little gold, but a considerable quantity of silver.

Gold dredging was first commenced in Montana in 1896, and the total estimated recovery up to and including the year 1914 has been approximately $6,600,000.

NEVADA.

The production of gold, silver, copper, lead, and zinc from Nevada ores sold or treated in 1914 was valued at $29,300,842.

The output of recoverable gold from Nevada mines in 1914 was valued at $11,481,188, and of this amount 87.29 per cent was derived from dry or siliceous ore and 9 per cent from copper ores. The placer gold output was 18,250 ounces, of which 10,345 ounces came from placer mines in Nye County. Bullion from gold and silver mills contained 79 per cent; concentrates about 8 per cent; and crude ore shipped to smelters 10 per cent. The mines of Esmeralda County produced nearly one-half of the total gold, of which the Goldfield district yielded $4,705,000. Nye County produced $3,377,262 in gold, of which the Tonopah district yielded about $2,650,000; the mines of the Comstock lode produced $434,000 in gold, and Humboldt, Mineral, White Pine, and Churchill Counties, in the order named, each produced more than $300,000 in gold.

For three years prior to 1914 the silver output of Nevada had been steadily increasing, but on account of the low prices of the metal in the last half of the year 1914 there was a slight decrease in silver. The total output was 15,455,491 ounces valued at $8,546,887. Of this total yield 95.3 per cent was credited to siliceous ores. Ores treated at gold and silver mills yielded 12,100,000 ounces; concentrates, 1,720,000 ounces; and crude ore, 1,600,000 ounces. The Tonopah district in Nye County produced 73.7 per cent of the entire silver production of Nevada; the Comstock lode, or Storey County, yielded less than 280,000 ounces, but Churchill County's output was more than 1,545,000 ounces.

There were 731 producers of gold, silver, copper, lead, and zinc in Nevada in 1914. Of the total of 4,522,022 short tons of ore sold or treated, 1,461,577 tons were treated in gold and silver mills, principally cyanide mills; 2,768,193 tons were concentrated, largely copper ore; and 261,018 tons represented crude ore shipped to several smelters. The largest part of the total tonnage, or 2,882,121 tons, represented copper ore; 1,594,486 tons were siliceous ore; 16,088 tons lead ore; 9,490 tons zinc ore; 3,762 tons copper-lead ore; and 16,075 tons lead-zinc ore.

The siliceous ores treated in 1914 yielded an average value of $11.39 per ton in gold and silver, the copper ores 39 cents per ton, the lead ores $13.13 per ton, and the lead-zinc ores $3.96 per ton.

The production of gold from placers increased about $72,000. Sixty-seven per cent of all the gold output and 68 per cent of all the silver production from Nevada in 1914 came from ores treated by cyanidation.

No new mining districts or new mines of exceptional importance, like those opened at Tonopah and Goldfield, were discovered in 1914, but development was active and the construction of new

milling plants was general throughout the State. Silver and copper camps made a reduced output during the latter part of the year. This condition was due entirely to lower metal prices and not to the lack of any essential supplies like cyanide. The number of milling plants using the straight cyanide process increased, as was to be expected, and no gold was recovered in 1914 by chlorination.

NEW MEXICO.

In 1914 the production of metals from New Mexico mines showed an increase in gold, silver, copper, and zinc, and a decrease in lead. The mine output of gold was $1,171,696, an increase of $289,770; that of silver was 1,777,445 ounces, an increase of 146,172 ounces.

The Mogollon district, Socorro County, 80 miles from the nearest railroad, at Silver City, Grant County, continued to be the most productive district in New Mexico in output of gold and silver. The gold output of the district in 1914 represented 54 per cent of the State's production of this metal, and the silver output was 79 per cent of the State's total silver output. All the ore was milled in the district by concentration, sliming, and agitation and percolation in cyanide solution, the bulk of the product being cyanide precipitates, though there were several cars of high-grade gold-silver concentrates. In terms of recovered metal, the ore averaged per ton 0.2236 ounce, or $4.62 in gold, and 10.36 ounces, or $5.73 in silver.

Pinos Altos district, Grant County, became the second in gold output, with a yield of more than $135,000 in gold from both placer and deep mines. the yield increasing heavily from both sources.

Some exceptionally high-grade gold ore was shipped from this district in several lots of a ton or less each. This district produces also silver, copper, lead, and zinc. There was an increased output of gold bullion from the amalgamation mill on the North and South Homestate mines, at Whiteoaks, Lincoln County. This district has yielded a large quantity of gold. The Elizabethtown district, Colfax County, one of the leading mining districts in New Mexico in total production to date from both placers and lode mines, made a heavily increased output of gold in bullion, smelting ore, and concentrates from the Aztec mine. With only a slightly increased placer yield, this district in 1914 gave way to Pinos Altos as the principal placer district. The Lordsburg district, Grant County, with heavily increased shipments of siliceous-gold and silver bearing copper and dry ores from fissure veins, doubled its gold output and increased its silver yield over 50 per cent. During 1914 gold was found in the concentrates of the Chino Copper Co. in amounts sufficiently large to be credited under their smelting contract with 2.71 cents per ton of original crude ore treated or 0.1 cent per pound of copper produced, amounting in the aggregate to a considerable quantity of gold. A decrease of over one-half in the output of gold-copper ores from the Jarilla district, near Orograde, Otero County, did not however decrease the yield of gold in the same proportion, as the average content in gold was higher in 1914. The mines and matte smelter of the Santa Fe Gold & Copper Co., at San Pedro, Santa Fe County (reopened in July, 1912, after being idle since 1907), were operated for only one month in 1914 as compared with 10½ months in 1913, so that there was a decreased output of gold from this district. The districts of Sierra County

made only a small production. The Cochiti (Bland) district, Sandoval County, inactive since 1904, but with a record from 1894 to 1904 of a production of $695,000 in gold and $345,000 in silver, was reopened in December, 1913, and in September, 1914, an 100-ton cyanidation plant was installed and operated throughout the year on one-half capacity, with some output of gold-silver cyanide precipitates.

Siliceous ores amounting to 169,046 tons, yielded 77 per cent of the gold and 82 per cent of the silver, and copper ores amounting to 2,005,024 tons contained about 20 per cent of the gold and nearly 17 per cent of the silver.

OREGON.

The value of the gold, silver, copper, and lead produced at mines in Oregon in 1914, according to Charles G. Yale, of the United States Geological Survey, was $1,676,153, compared with $1,746,402 in 1913, and $849,885 in 1912, and a decrease of $70,249 from the value in 1914. There was a decrease in the output of all metals in 1914 and also in the number of producing mines.

The gold production was $1,591,461, of which $1,043,144 came from deep mines and $548,317 from placers.

The decrease of gold from the deep mines was $133,938, and the increase from the placers was $97,689.

The placer mines of the State produced $548,317 in gold in 1914, an increase of 21.68 per cent. The hydraulic mines yielded $178,899 in gold in 1914, the drift mines $4,426, and the surface placers and dredge combined $364,992. Only one dredge was in operation, but the gold from this dredge far exceeded the combined yield of all other forms of placer mining in the State. In 1914 there were in operation in Oregon 56 productive hydraulic mines, 6 drift mines, and 15 surface placers (including a dredge), 77 in all—a decrease of 51.

From 28 deep mines (a decrease of 17) 124,331 tons of ore were mined and treated in 1914—a decrease of 31,570 tons. Of this quantity 106,422 tons were milled, 12,815 tons were sent to concentrating mills, and 4,594 tons went to smelters. There were also 500 tons of old tailings treated, yielding $1.76 per ton. The average recovered value from the siliceous ore in 1914 was $8.99 per ton in gold and silver, as compared with $8.21 in 1913 and $6.84 in 1912. In milling the ores the average recovery per ton from both bullion and concentrates was $9.299 in gold and $0.296 in silver.

The southwestern counties of Oregon, including Coos, Curry, Douglas, Jackson, Josephine, and Lane, yielded a combined production of $160,085 in gold and $7,418 in silver. The increase in gold output in 1914 as compared with 1913 was $57,557.

In the northeastern counties—Baker, Crook, Grant, Malheur, and Wheeler—there was a combined gold yield of $1,431,376, of which Baker County contributed nearly 92 per cent. The placer gold yield in 1914 was $406,680, an increase of $27,768. The gold from lode mines was $1,024,696 in 1914, a decrease of $121,574.

The yield of silver in Oregon in 1914 aggregated 142,552 fine ounces—a decrease of 36,484 ounces in quantity. As in 1913, Grant County made the largest silver output—68,556 ounces. In other counties than Grant, Baker, and Josephine the silver yield was merely nominal.

There are very few large mining operations in Oregon, most of the properties being comparatively small producers.

The mines of the State that yielded an output valued at more than $100,000 were the Cornucopia Mines Co. of New York, the Columbia Mining Co., and the Commercial Mining Co. (Rainbow), all deep mines, and the Powder River dredge. Aside from the dredge, only one placer mine in the State yielded over $10,000 in 1914.

GOLD AND SILVER PRODUCTION OF PHILIPPINE ISLANDS.

The production of gold in the Philippine Islands during the year 1914 is placed at 53,179 fine ounces, of the value of $1,099,300, and of silver at 10,300 fine ounces.

The deposits at the mint in San Francisco amounted to 36,780.614 fine ounces of gold, valued at $760,322.77, and of silver to 6,042.96 fine ounces.

SOUTHERN APPALACHIAN STATES.

The combined gold production of Alabama, Georgia, North Carolina, South Carolina, Maryland, Tennessee, and Virginia in 1914 was $173,589, against $165,730 in 1913. North Carolina again ranked first with $131,141, an increase of nearly $4,700. Georgia produced $16,270; Alabama, $11,970; South Carolina, $7,360; Tennessee, $7,360; and Virginia and Maryland, less than $500 each.

The production of gold was almost entirely from quartz ores and from placers, as only 327 ounces, of which nearly all was contributed by Tennessee, was derived from copper ores.

The gold production from 45 placer mines was less than $20,000, and a large part of the deep mine gold came from a few mines—the Iola, Uwarra, Howie, and Rich Cog in North Carolina, the Haile in South Carolina, and the Hog Mountain in Alabama.

The silver production of the Southern Appalachian States in 1914 was 98,928 ounces, against 109,170 ounces in 1913. Less than 2 per cent of the output was derived from siliceous ores and placer mines. All the remainder came from copper ores, mainly from the Ducktown district in Tennessee.

The following tables give the total production of gold in the southern Appalachian States from the discovery of the metal to the end of 1914 and the yearly output of each State, so far as records are available. The figures given are those of the Bureau of the Mint for the period 1799 to 1904 and those of the United States Geological Survey for the period 1905 to 1914.

The total yield of gold from 1799 to the end of 1914 is $50,689,568, as shown in the following table:

Value of estimated production of gold in the southern Appalachian States, 1799–1914, by States.

Alabama	$749,384	Tennessee	$230,217
Georgia	17,752,627	Virginia	3,293,407
Maryland	71,339		
North Carolina	23,416,357	Total	50,689,568
South Carolina	5,176,237		

Estimated production of gold in Alabama in 1830–1879 and annually since 1880.

SOUTH DAKOTA.

The value of the gold, silver, and lead produced in South Dakota in 1914 from 30 productive mines, 10 of which were placers, amounted to $7,431,343, compared with $7,424,333 in 1913.

The gold output in 1914 was valued at $7,333,508, compared with $7,319,294 in 1913—an increase of $14,214. The production of silver increased from 172,702 to 176,642 fine ounces. The placer gold output amounted to only 68 ounces.

South Dakota has produced in the 38 years of its active output, from 1876 to 1914, inclusive, $185,287,640 in gold and 5,832,669 fine ounces of silver, with a commercial value of $4,213,674; a total of $189,501,314.

A total of 2,019,262 short tons of ore was mined and treated in 1914. Of this total, 2,017,882 tons was treated in the mills in the State, yielding an average of $3.605 in gold and 0.086 ounce in silver. The output of smelting ore (1,380 tons) averaged 2.047 ounces of gold and 2.94 ounces of silver to the ton.

The Homestake mine and mills were operated continuously throughout the year and made an output of 1,587,774 tons, which yielded bullion of the value of $6,160,161, averaging $3.88 a ton, compared with 1,540,961 tons of ore, $6,186,652 in bullion, and an average of $4.01 a ton in 1913.

In addition to operating its siliceous ore mines and mill, the Golden Reward Co. continued experimental work with the roasting of the sulphide or "blue" ore before cyanidation, both at the 75-ton Wedge roaster at the Astoria shaft and at the mill at Deadwood. Custom ore was also handled at the mill. The new Mogul mill at Terry was placed in operation early in 1914 and continued active throughout the year on company and custom ore. The Trojan mine and mill were

operated at increased capacity. The Reliance mill was operated on company and custom ore. The Wasp No. 2 Co., which was inactive for a short period in 1913, resumed operation of its mill early in 1914, mining by the open-cut system and using a steam shovel for stripping. The Bismarck 200-ton cyanide plant, in operation since April, 1913, was closed in September, 1914. The Deadwood-Standard cyanide plant was operated for a period by lessees. Some ore was shipped from the Rattlesnake Jack mine, in the Bear Butte district, and from the Heidelberg and Monarch mines, in the Two Bit district.

The yield from placers in Custer and Pennington Counties was nominal. Some production was made at the First National lode mine and mill, Hill City, and at the Otho lode mine and mill, Keystone.

TEXAS.

The output of Texas mines during 1914 was $234 in gold and 530,817 ounces of silver, which shows a small decrease in gold and an increase of more than 100,000 ounces of silver.

The greater part of the silver came from the Presidio mine in the Shafter district. The ore from this mine is chiefly silver chloride, with which is associated some silver-bearing galena. The ore mined at this property was treated by pan amalgamation from 1884 to May, 1913, when the mill was reconstructed into a 125-ton cyanidation plant using the all-sliming process and continuous agitation and filtration.

The estimated output of silver from Texas for the period 1885 to 1914, inclusive, amounts to 11,742,409 fine ounces, a large part of which was derived from the Presidio mine.

UTAH.

Mines in Utah produced ore and bullion during 1914 containing gold, silver, copper, lead, and zinc valued at $37,151,593, as against $44,858,210 in 1913—a decrease of $7,706,617.

The gold output was valued at $3,265,347—a decrease of 8.41 per cent compared with 1913. Salt Lake County was the largest producer and made an output of gold valued at $2,159,500, against $1,777,214 in 1913. Most of the gold came from the copper ores in the West Mountain or Bingham district, in Salt Lake County, the yield amounting to 65.89 per cent of the total State output. The Tintic district, in Juab and Utah Counties, ranked second, with 29.21 per cent of the total. Summit County produced $84,000 in 1914 and $74,242 in 1913. Tooele County, which was once the leading producer of gold, yielded only about $16,000 in 1914.

Silver production from ores in Utah decreased from 13,084,835 ounces in 1913 to 11,154,916 ounces in 1914, or 14.75 per cent. Juab County produced 4,444,996 ounces in 1914, against 5,600,617 ounces in 1913, and Utah County produced 264,532 ounces in 1914, against 265,850 ounces in 1913. The output of Tintic district, comprising the larger part of the productive mineral area of these two counties, decreased from 5,829,484 ounces in 1913 to 4,666,944 ounces in 1914. Salt Lake County produced 2,629,153 ounces, against 2,504,021 ounces in 1913. The larger part of the output in 1914, 2,383,051 ounces, was derived from the ores of the West Mountain or Bingham

district. From the Park City region the yield in 1914 was 2,955,000 ounces, a decrease of about 20.51 per cent from that of 1913.

The placer production of gold and silver was nominal, as the seven productive properties made an output valued at less than $1,300.

Separated by classes of ore, the siliceous ores yielded less than 12 per cent of the gold and 12 per cent of the silver; copper ores 62 per cent of the gold and 15 per cent of the silver; lead and lead-zinc ores about 26 per cent of the gold and 72 per cent of the silver.

Gold and silver in mill bullion was valued at only $20,700, and most of this was recovered by cyanidation.

During the first half of 1914 the most of the mining properties in Utah were operating at full capacity, but operations were on a much reduced scale during the last part of the year.

Considerable work was done in opening up some of the old mines in the Big and Little Cottonwood districts, which had been idle a number of years.

There was some mining on both placer ground and quartz lodes in the Newton and Fortuna districts in Beaver County, but the only production reported was from the Sheep Rock mine. In Washington County the Goldstrike district will be a producer of bullion from deep mines in 1915.

Four smelters were active in 1914, the Garfield copper plant and the Murray, Midvale, and International lead plants. The last-named smelter is also equipped with copper furnaces.

WASHINGTON.

The production of gold was valued at $557,173—a decrease of $139,102. Only one mill was active, and the production of the Surprise, Lone Pine, Pearl, and Knob Hill mines was less than that of former years.

Siliceous ores, which amounted to 73,892 tons, yielded all of the gold except 278 ounces, which came from placers and 221 ounces derived from copper ores smelted. Ferry County produced more than 92 per cent of all the gold.

The output of silver decreased from 331,239 ounces, valued at $200,068, in 1913 to 264,861 ounces, valued at $146,468, in 1914. There was no material change in Ferry County, but the production of silver in copper ores of Stevens County was somewhat less.

Crude ore shipped to smelters contained 67 per cent of the gold and 68 per cent of the silver. The copper ores yielded only 35 per cent of the silver, against 42 per cent in 1913.

The value of the gold and silver content of the siliceous ores averaged $8.66 a ton, the copper ores $2.51 a ton, and the lead ores $10.41 a ton.

WYOMING.

The value of the gold and silver produced in Wyoming during the calendar year 1914 was only $5,070, as against $24,762 in 1913. The silver yield amounted only to 116 fine ounces.

The principal producing district in Wyoming in 1914 was the Atlantic City (or South Pass) district, Fremont County, with yield in mill bullion, shipping ore, and placer bullion, but the output showed

a heavy decrease as compared with that in 1913. If the power and freight problem in this district can be solved the production of the district may regain its importance.

Copper ore was shipped from Hartville, Platte County. A small quantity of placer gold was recovered in the Hurricane district, Crook County. The construction of an amalgamation mill in the Seminole district, Carbon County, as the result of a trial shipment for tests in 1914, promises a yield of gold from this district in 1915. Work will be resumed on the Rambler copper-platinum-palladium property at Holmes, Albany County, in 1915.

APPROXIMATE GOLD PRODUCT.

Approximate gold product of the United States during the calendar year 1914.

Items.	Weight.
	Fine ounces.
Domestic product of fine bars reported by private refineries	2,698,189
Unrefined gold of domestic production deposited at the mints and assay offices	1,861,000
Domestic gold contained in ores, copper matte, etc., exported for reduction	13,787
Total domestic product for 1914	4,572,976

Approximate disposition of the gold product of the United States during the calendar year 1914.

Items.		Weight.
		Fine ounces.

[1] Includes small quantity of silver from placers.
[2] Includes silver in lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.
[3] Includes dredge output from Alabama, North Carolina, Nevada, and Oregon; 1 dredge in each State.
[4] Philippine Islands and Porto Rico excluded.

DREDGE PRODUCTION.

The possible production of gold by dredges has been the subject of much discussion during the past 12 years, and some very sensational predictions have been made of the probable yield from this source. The production by dredges in the United States has been mainly in California and Alaska. The total yield during the last 11 years (revised figures) has been as follows:

Dredge output of gold, 1904–1914.

[Figures of the United States Geological Survey.]

Calendar years.	California.	Total United States, including Alaska.
1904	$2,187,088	$2,634,052

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Product of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792–1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1914.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1914, with the class of material from which they were made:

Gold and silver bars issued by the Government institutions and manufactured by private refineries for use in the industrial arts during the calendar year 1914.

Material used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	Dollars.	*Dollars.*	*Dollars.*	*Fine ozs.*	*Fine ozs.*	*Fine ozs.*
Bullion, old plate, etc.	39,526,787	2,493,245	42,020,032	3,797,186	25,435,431	29,232,617
United States coin	.....	708,861	708,861	.....	500	500
Total	39,526,787	3,202,106	42,728,893	3,797,186	25,435,931	29,233,117

Estimating that the total amount of gold coin used in the arts during the calendar year 1914 has been $3,500,000, and silver coin $100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was $45,520,032 and of silver 29,309,961 fine ounces.

In order to arrive at the net consumption in the industrial arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to coinage use. In the year 1914 these amounts aggregated $8,107,274 in gold and 6,758,330 fine ounces in silver, which leaves $34,621,619 of gold and 22,474,787 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The table following gives the amounts and classification of the gold and silver used in the industrial arts in the United States since 1880:

Gold and silver bars furnished for use in manufactures and the arts and classification of the material used, by calendar years, since 1880.

GOLD.

Total		59,646,166.09	59,646,166.09	286,037.69	4,628,617.63	4,914,655.32

THE WORLD'S INDUSTRIAL CONSUMPTION.

This bureau has endeavored for some years to obtain information as to the consumption of gold and silver in the arts, and the results of its inquiries have been made known each year. The usual inquiries were sent out last year, but the necessity of closing this report earlier than usual has made it impossible to do more than give the returns from a few countries without any attempt to compile a total.

INDUSTRIAL ARTS.

Australia.—The American consul at Melbourne, Australia, reports as follows regarding the amount of gold and silver used in industrial arts during the calendar year 1914: "The only statistics available show that 6,464 ounces of fine gold and 28,590 ounces of fine silver were issued from the Melbourne mint to jewelers and others for industrial purposes." The value of the gold in United States money is $133,622.52, and of the silver at the average price of silver bullion per ounce during 1914—viz, $0.55312—equals $15,813.70.

The American consul general at Sydney, Australia, reports that the amount of gold used in industrial arts during the year 1914 was 7,723 ounces, which, if of pure gold, would be of the value of $159,648.

British Guiana.—The amount of gold and silver used in industrial arts during the calendar year 1914:

Classification.	Value.	
	Gold.	Silver.
New bullion	$500	
Old plate, jewelry, etc	500	$100
Foreign coin	200	
Total	1,200	100

These figures represent 58.05 fine ounces of gold and 181 fine ounces silver.

Canada.—The amount of gold and silver used in industrial arts during the calendar year 1914 was as follows:

Material.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
New bullion	95,000	620,000
Old plate, jewelry, etc	[1] 1,500	[2]
Domestic coin	[1] 1,500	[2]
Foreign coin	[1] 1,000	[2]
Total	99,000 ($2,046,511)	620,000 ($342,860)

[1] Uncertain estimates. [2] Negligible.

Yukon Territory.—United States consul reports that the amount of gold bullion used in industrial arts during the calendar year 1914 was 1,000 ounces, fine.

CHINA.

Foochow Province.

Classification.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
New bullion (approximate)	1,200	19,000

The value of the above amounts are as follows: Gold (at $20.6718 per fine ounce), $24,806.16; silver, (at $0.55312 per fine ounce, average price during calendar year 1914), $10,509.28.

Mukden Province.

Classification.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value.
New bullion (bar)	6,200	[1] $128,165.16	100,000	[2] $55,312
Old plate, jewelry, etc			25,000	[2] 13,828
Total	6,200	128,165.16	125,000	69,140

[1] Value at $20.6718 per fine ounce.
[2] Value at $0.55312 per fine ounce (average price for the year 1914).

Shanghai Province (no official data available).

Classification.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value.
New bullion	13,500	[1] $279,069.30	67,500	[2] $37,335.60
Foreign coin	27,000	[1] 558,138.60	126,000	[2] 69,693.12
Total	40,500	[1] 837,207.90	193,500	[2] 107,028.72

[1] Value at $20.6718 per fine ounce.
[2] Value at $0.55312 per fine ounce (the average price of silver for the year 1914).

Swatow Province.

Classification.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
Old plate, jewelry, etc. (estimated)	27,000	133,000

The United States consul states that this answer was obtained from local gold and silver smiths and applies to Swatow city only.

The value of the above amounts of pure gold and silver are—for the gold $558,138.60 and for the silver $73,564.96.

Costa Rica.—

Description.	Gold.		Silver.	
	Grammes.	*Colones.*	*Grammes.*	*Colones.*
Old plate, jewelry, etc.	3,000	4,000 ($1,860)	1,000	500.00 ($232.50)

Denmark.—No official data available, but it is stated by experts that, owing to the difficulty of obtaining gold, there has been much less used during the year 1914 than during previous years.

The amount of gold and silver used in industrial arts in Finland during the calendar year 1913: There were 304,697 grams of gold-work and 252,762 metric ounces of silverwork hall marked (stamped) in Finland, which were estimated to contain approximately, fine ounces, respectively, as follows:

Classification.	Fine ounces.	Value.
Gold	7,837	$162,005
Silver	67,449	37,299

Great Britain.—The United States consul general reports the amount of gold and silver used in the industrial arts during the calendar year 1913 as follows:

Description.	Gold.	Silver.
	Fine ounces.	*Fine ounces*
New bullion, old plate, jewelry, etc.	[1] 824,400	[1] 14,000,000
Domestic coin	7,063– 9,407	.....
Valued at	£30,000–£40,000	.....
Foreign coin [2]	($145,995–$194,660)	.....
	.....	.....

[1] Estimated; no official returns. [2] Information not available.

Madagascar.—

Classification.	Gold.	
	Fine ounces.	Value.
New bullion	102.018	$2,108.90
Old plate, jewelry, etc.	575.155	11,889.50
Foreign coin	623.373	12,886.26
Total	1,300.546	26,884.66

Russia.—Estimated weight of gold used in the industrial arts during the calendar year 1913: In 1911, 1,075 poods, 35 pounds, 26 zolotniks, and 22 dolis, of the value of 22,762,462.56 rubles ($11,722,668.22); in 1912, 991 poods, 7 pounds, 1 zolotnik, and 7 dolis, of the value of 20,970,319.92 rubles ($10,799,714.76).

In the year 1912 there were presented for stamping (hall marking):

Items.	Poods.[1]	Pounds.	Zolotniks.
In gold ware	575	31	28
Of which there were of Russian manufacture	536	17	87
In silverware	10,039	9	2
Of which there were of Russian manufacture	9,588	22	44

[1] 1 pood=40 pounds; 1 pound=96 zolotniks; 1 pood=16.380496 kilograms.

Gold watch cases 80,635, of which 341 were of Russian manufacture; silver watches 209,510, of which 34,231 were of Russian manufacture. (The gold ware stamped was near the fineness of 56/96 and silverware near 84/96.)

Switzerland.—The amount of precious metals used in industrial arts in Switzerland during the calendar year 1914 was as follows: Gold, 26,746 fine ounces; silver, 278,017 fine ounces. The value of the gold in United States money is $552,889 and of the silver, at the average price of silver per fine ounce during 1914 ($0.55312), $153,777.

Classification.	Gold.	Silver.
	Kilograms.	*Kilograms.*
New bullion, old plate, jewelry, etc., domestic and foreign coins	10,700	62,000

The above amounts were obtained from the chief of the Federal bureau of gold and silver matters. Assuming the above to be fine kilograms, the value of the gold used would be $7,111,220 and that of silver $1,102,295.

The imports during the same period were as follows:

From Europe:		
United States coin		$77,287
Foreign coin		28,201
Foreign bullion		202,815
Bullion in ore		24,804
Total from Europe		333,107
From points other than European:		
United States coin	$1,819,144	
Foreign coin	1,838,887	
Foreign bullion	6,591,038	
Bullion in ore	129,104	
		10,378,173
Grand total gold imports		10,711,280

STOCK OF MONEY IN THE UNITED STATES.

On December 31, 1914, the stock of domestic coin in the United States was $2,252,316,331, as shown by the following table:

Official table of stock of coin in the United States, Dec. 31, 1914.

Items.	Gold.	Silver.	Total.
Estimated stock of coin, Dec. 31, 1913	$1,601,108,891	$745,260,957	$2,346,369,848
Net imports United States coin, calendar year 1914	----------	1,022,868	1,022,868
Coinage, calendar year 1914	53,457,818	6,083,823	59,541,641
Total	1,654,566,709	752,367,648	2,406,934,357
Less:			
United States coin melted for coinage (face value), calendar year 1914	1,763,397	695,241	2,458,638

United States coin (net exports), calendar year 1914	148,559,388	----------	148,559,388
Total	153,822,785	795,241	154,618,026
Estimated stock of coin in United States Dec. 31, 1914	1,500,743,924	751,572,407	2,252,316,331

NOTE.—The number of standard silver dollars coined to Dec. 31, 1914, was 570,272,610, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 571,419,469. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; and since 1883 the number melted has been 197,665, and the number of Hawaiian dollars melted to Dec. 31, 1914, has been 455,141, a total disposition of 3,147,806, leaving in the United States on Dec. 31, 1914, 568,271,663 standard silver dollars and 183,300,744 dollars in subsidiary silver coins.

The value of gold and silver bullion held by the Government institutions on December 31, 1914, was as follows:

Gold and silver bullion in the mints and assay offices on Dec. 31, 1914.

Bullion.	Value.
Gold	$304,354,958
Silver (cost)	3,511,066
Total	307,866,024

The total metallic stock in the United States was as follows:

Metallic stock in the United States on Dec. 31, 1914.

Bullion and coin.	Value.
Gold	$1,805,098,882
Silver	755,083,473
Total	2,560,182,355

The location of the stock of metallic and paper money in the United States on December 31, 1914, was as follows:

Money.	In Treasury.	Outside of Treasury.	Total.
Metallic:			
Gold bullion	$304,354,958		$304,354,958
Silver bullion	3,511,066		3,511,066

Total stock of money		3,582,596,867	3,948,925,392

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1914 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

The silver market during 1914 has shown some great and perplexing fluctuations The price has been as high as 27¾d. and as low as 22⅛d., and the peculiarity has been that when silver seemed strongest it became particularly weak, and when its weakness was most pronounced it again suddenly developed remarkable strength.

These contradictory movements have occurred twice within the year, the more recent experience being the continuous fall at the time when large purchases were being made for the Government, and the rapid rise toward the end of the year as soon as India began to take a renewed interest in the market.

In explanation of these movements we have to remark that at the commencement of the year the liquidation of the large amount held by the Silver Syndicate proceeded smoothly and efficiently, the extensive bear position which was open at that time in expectation of a fall, necessitating large buying of silver, and the price remained very steady, helped materially by extensive orders for Germany and other continental centers from time to time, and by the 3d of April the whole accumulation had been finally disposed of. The total variation of price for ready silver during all this time did not exceed $\frac{9}{16}$d. per ounce, standard. This operation was much assisted by the reduced supplies from Mexico, and it was at this juncture that the market gave most promise of a substantial rise. As the result of purchases for India as well as China the market remained steady for about a month, and then for reasons which are particularly obscure a wave of weakness began to show itself in China, up to now rather a supporter, and sales of silver from that quarter became predominant. The fall started at first by a large amount of supply which had accumulated in Mexico being forced upon the market, and although this was disposed of before long, the realization of subsidiary coin from Hongkong contributed still further to depress the price, which fell fairly continuously during the whole of July. Contrary to all experience the low price did not induce any buying on account of China, the exchanges falling continually below the parity of silver in London, and both then and subsequently the support which might have been looked for from the encouragement of exports from the East did not arrive.

It is not improbable that the gravity of the issues of the assassination of the Crown Prince of Austria at the end of June and the fear of its effect upon European peace may have been quickly perceived by the German element of the trading community in China, perhaps better informed as to its true character than the rest of the world, and the market seemed to be in a thoroughly hopeless state, the general fear of war in the last days of July producing important selling from all quarters.

At the actual commencement of hostilities the many uncertainties of the position were so great that there was no quotation in silver for five days. The first day of business after the protratced bank holidays saw a startling change. On the announcement that a large purchase of silver for the English Mint was imminent, a rush on the part of the operators who were short of the metal to cover their commitments, and the actual necessities of the Government in carrying out the policy they had foreshadowed produced an immediate rise to 26d., and a further advance on the 10th August to 27¾d. per ounce, standard. This, however, proved to be the top of the market, and although there were some important purchases made for France and Belgium, the rate began to fall away rapidly, very large shipments from America which had been temporarily detained in view of the uncertainty as to the safety of navigation having now begun to arrive and to be realized. It needs to be explained that at the reopening of business on August 7 it was only possible to sell silver actually in the country for immediate cash, and there has been no opportunity since to make a forward quotation.

By August 29 the price had receded to 23⅞d. per ounce, but the immediate pressure of sales being over there was a recovery to 25 3/16d. on the 11th of September, followed by a new progressive decline to 22 5/16d. on the last day of October.

Since then a good inquiry has been received for shipment to India, and these purchases, associated with the continual requirements of the mint, have produced a better although fluctuating market, prices varying from 22½d. on November 13, the lowest point of the year, to the present quotation.

Unusual difficulty attaches to any estimation of the future of silver. The war has so completely altered the complexion of business in the Far East, owing to the extent of German influence on banking and commerce there, that a considerable time may be required to readjust the conditions already complicated by past political and other difficulties; but there is no reason to suppose that a country with such possibilities as China, with a currency still on a silver basis, will cease to exercise an important influence on the value of this metal, but how soon or in what direction that influence will be felt it is hard to determine. A large stock of silver is at present held there, but probably can not be dispensed with; and as the low rates of exchange now current are favorable to exports and discouraging to imports—a condition which is generally beneficial to silver—support from that quarter may come sooner than expected. The bountiful harvests of India this year, upon the conclusion of a monsoon exceptionally favorable, would in the natural course induce exports and consequent purchasing power for silver, assuming that the ordinary opportunities of commerce were in existence; but with so much of the continent of Europe unavailable as purchasers of produce, Indian trade is suffering as much inconvenience as all others, and may not be able to derive the benefit of her crops to anything like their usual value. The reserve of currency is large, and buying of silver for rupees can hardly be expected for a long time.

On the other hand it is to be noted that the production of silver in Mexico has been, and is likely to be still, much curtailed, and neither the United States nor Canada have sent forward so much as formerly. The total value of the metal imported from those sources in 1914 may be reckoned at about £10,200,000 as compared with £13,000,000 in 1913 and £14,600,000 in 1912, a diminution of £2,800,000 since last year, and £4,400,000 against the year before.

The stock in London, which stood at about £1,600,000 in January last, is now somewhat less than £1,000,000, the large purchase of upward of £2,200,000 by the English mint since August having absorbed the supply at a time when most of the other uses of silver have been in abeyance so that it is reasonable to believe that when peace is reestablished, or even before, the need for silver for foreign coinage and other purposes will be large, and as present quotations are far lower than they have been for many years some improvement in value may confidently be anticipated.

Highest, lowest, and average price of silver bullion and value of a fine ounce each month during the calendar year 1914 and year ended June 30, 1915.

CALENDAR YEAR.

Month.	Highest.	Lowest.	Average price per ounce, British standard, 0.925.	Equivalent value of a fine ounce with exchange at par $4.8665.	Average monthly price at New York, exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly New York price of fine bar silver.

NOTE.—The quantities in the column "net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

IMPORTS AND EXPORTS OF BULLION INTO AND FROM LONDON.

The imports and exports of gold and silver bullion to and from London to various countries, during the calendar year 1914, were as follows:

Countries.	Imports.		Exports.	
	Gold.	Silver.	Gold.	Silver.
Austria	$1,034,934	$973	$293,937	$45,108
Belgium	133,911	806,019	2,293,421	1,040,896

Commercial ratio of silver to gold each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetgeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, and since from daily London quotations.]

PRODUCTION OF GOLD AND SILVER IN FOREIGN COUNTRIES.

NORTH AMERICA.

British North America.

PRODUCTION OF GOLD AND SILVER IN CANADA DURING THE CALENDAR YEAR 1914.

[By John McLeish, B. A., chief of the division of mineral resources and statistics, Canada department of mines, Ottawa, Canada.]

Gold.—The total production of gold in placer and mill bullion and in smelter products in 1914 is estimated at 770,374 fine ounces, valued at $15,925,044, as compared with 802,973 fine ounces, valued at $16,598,923, in 1913, showing a decrease of $673,879, or about 4 per cent.

Of the total production in 1914 about $5,695,508 was derived from placer and alluvial mining; $6,050,690 in bullion from milling ores; and $4,228,846 from matte, blister copper and other smelter products, etc. In 1913, of the total production, about $6,346,072 were derived from alluvial workings; $5,185,544 in bullion from milling ores; and $5,067,307 from smelter products derived from ores, concentrates, etc., smelted.

The production in Nova Scotia and Quebec is small compared with the other Provinces, but shows an increase of over 25 per cent in 1914.

The Ontario production, $5,546,356, shows an increase of over $1,000,000, due to the extension of milling facilities in the Porcupine field.

No records have been received with respect to gold production in the Beaver Lake district of Saskatchewan, or of recoveries from the river bars near Edmonton, Alberta, although activity has been reported in both localities.

The exports of gold-bearing dust, nuggets, gold in ore, etc., in 1914 were valued at $15,242,200.

British Columbia.—The production in British Columbia was $5,177,343, of which $524,000 is credited to placer workings as estimated by the provincial mineralogist and $4,653,348 to smelter products and bullion from milling ores. The British Columbian production in 1913 was $6,149,027, being $510,000 from placer workings and $5,639,027 from smelter products and mill bullion.

The Yukon production shows a falling off of $721,384, the total in 1914 being $5,125,396, including a small value in mill bullion, as against $5,846,780 in 1913. The total amount on which royalty was paid during the year 1914, according to the records of the mining lands and Yukon branch, Interior Department, was 309,691.17 ounces, as against 352,000.04 ounces in 1913.

Smelter and refinery production in 1914.

Mineral production by provinces 1913 and 1914.

Province.	1913	1914
Nova Scotia	$19,376,183	$17,514,786
New Brunswick	1,102,613	1,034,706
Quebec	13,475,534	12,259,637
Ontario	59,167,749	52,147,973
Manitoba	2,214,496	2,428,902
Saskatchewan	881,142	710,840
Alberta	15,054,046	12,773,669
British Columbia	28,086,312	24,202,924
Yukon	6,276,737	5,402,062
Total (Dominion)	145,634,812	128,475,499

Silver.—The falling off in price of silver, amounting to 4 cents on the average price for the year, the cessation of price quotations, and the difficulties of marketing the metal immediately following the declaration of war, restricted the operations in the Cobalt camp, causing a lower production than might have been expected under normal conditions.

The total Canadian production in 1914 was 27,544,231 ounces, valued at $15,097,269, as against 31,845,803 ounces, valued at $19,040,924, in 1913—a decrease of 4,301,572 ounces, or 13.5 per cent in quantity, and of $3,943,655, or 20.7 per cent in total value.

Of the total production, 24,215,926 ounces, or 88 per cent, is credited to Ontario. The production from the silver camps is reported as 9,614,069 fine ounces in bullion shipped and 14,544,524 ounces (after deducting 5 per cent for smelter losses) contained in ore and concentrates shipped from Cobalt district. There is also included in the total a small quantity of silver contained in gold bullion shipped.

The Ontario production in 1913 was 28,411,261 ounces, showing a falling off for the Province of 4,003,805 ounces, or about 14.1 per cent.

In addition to the bullion shipments from the Cobalt camp, 9,052,-993 ounces were produced in other silver refineries in the Province, making a total of 18,667,062 ounces, or 67.7 per cent of the Ontario production, recovered within the Province in the form of bullion.

The production in British Columbia, representing refined silver and silver contained in smelter products, and estimated recoveries from ores exported, was in 1914 about 3,212,111 ounces, as compared with 3,312,343 ounces in 1913.

In Quebec Province there is a small silver content in the pyrites ores shipped, while in the Yukon 67,432 ounces are estimated as being contained in the placer gold produced and recovered from the copper ores shipped from Whitehorse.

The exports of silver bullion in ore, etc., as reported by the customs department, were 28,020,089 ounces, valued at $15,584,813.

CANADA.

[By Consul General John G. Foster, Ottawa, in Daily Consular and Trade Reports, Mar. 11, 1915.]

Exports to United States from Ottawa consular district, 1914: Gold bullion, $253,500.

Establishment of a gold depository.—With the outbreak of war in Europe the financial and banking situation in Great Britain and Canada became seriously disturbed, and immediate steps were taken by Canada to avert panic and safeguard gold reserves. Besides providing for the establishment of a moratorium, the issue of emergency currency, and other precautionary measures, the Bank of England arranged to establish in Ottawa a depository where gold could be received without the risk of ocean shipment, the minister of finance in Canada acting as trustee to hold gold for account of the Bank of England. United States bankers desiring to pay gold to London forwarded it to the minister of finance at Ottawa for account of the Bank of England, and in this way obviated the actual shipment of gold across the Atlantic to make payments in London. Exchange rates were thus eased, and United States and Canadian exports, which went forward to Europe in the fall, helped to restore the financial balance.

The arrangement under which the minister of finance was authorized to receive gold in trust for the Bank of England was, briefly, as follows: The minimum of the transaction was established at $20,000; shipments to be made in kegs or boxes, and a statement that the amount was to be held in trust for the Bank of England to accompany the shipment, which was to be addressed to the minister of finance and receiver general of Canada, at Ottawa; the minister to be advised also to whom the proceeds were to be paid in London. On the gold being received and checked the Bank of England was advised by cable of the amount and the person to whom the proceeds were payable in London. The rate established by that institution for gold was 77s. 6d. ($18.86) per ounce for standard fine bars and 76s. ½d. ($18.50) per ounce for eagles. If sovereigns were accompanied by a guaranty from the person shipping same that they were of correct standard weight, namely, 122.5 grains for sovereigns and 61.125 for half sovereigns, the banks would pay out a like amount in pounds in London, less 3 pence per ounce to cover freight and insurance. It was this arrangement that largely accounted for the heavy increase shown in imports of coin and bullion.

Measures adopted to safeguard financial situation.—In addition to this arrangement with the Bank of England, a number of important measures were taken by the Canadian Government to safeguard the financial situation. These measures have been summarized by the Monetary Times annual as follows:

1. The Dominion Government stood ready to issue Dominion notes to such an amount as was necessary against securities deposited by the banks and approved by the minister of finance.

2. The Government authorized the chartered banks of Canada to make payments in bank notes instead of in gold or Dominion notes until further official announcement in that behalf.

3. The redemption in gold of Dominion notes was suspended.

4. The Government authorized the chartered banks of Canada to issue excess circulation to an amount not exceeding 15 per cent of their combined unimpaired paid-up capital and rest or reserve fund from August 3 until further official announcement.

5. Legislation was obtained to declare a moratorium if necessary.

6. The power of issue of Dominion notes was increased by providing that the finance minister should hold gold to the amount of 25 per cent of the Dominion notes issued up to a total issue of $50,000,000, and in regard to Dominion notes issued in excess of that amount gold to be held equal to such excess.

7. A war appropriation of $50,000,000 was voted for the fiscal year that will end on March 31, 1915.

8. Tariff legislation was passed involving new taxation to increase revenue.

The effect of these measures was to stabilize the financial situation, to assist materially in financing the operations of railways, provincial governments, municipalities, and corporations, and to conserve the Canadian gold supply against demands from foreign sources.

Difficulties in financing projects.—While these measures had a marked effect in steadying the financial situation in Canada, the country was in the position of being suddenly deprived of large supplies of capital that had been supplied from Great Britain for several years, and of having to meet heavy sums for interest obligations due in London, which heretofore had been largely met by the floating of new loans. Canadian borrowers in Great Britain are chiefly the Dominion Government, provincial governments, municipalities, industrial corporations, and loan and mortgage companies. While the special measures taken in Canada to increase revenue, and the emergency measures previously mentioned have somewhat relieved the Federal Government, and the provincial governments have been helped by the sale of debentures and bonds in Canada, Great Britain, and the United States, municipalities and industrial corporations have experienced some difficulty in financing their requirements, and are looking to the United States as a market for some of their securities.

Although a large amount of Great Britain's heavy war loans have been set aside for advances to the Dominion, these advances are to provide funds to meet naval and military expenditures and not to finance development undertakings. The recent action, also, of the British Government in prohibiting the issue of public loans outside of Great Britain, except in special instances to cover colonial needs for war purposes, will prove a strong factor in sending Canadian borrowers to New York for financial assistance, particularly in the case of bonds and debentures of municipalities and industrial corporations. Unless Canada is able to finance these various undertakings successfully its power as a purchaser and consumer will be materially curtailed. In this connection a statement made by Sir Edmund Walker, president of the Canadian Bank of Commerce, at the annual meeting of that institution, is pertinent and illuminating: "We can not," said Sir Edmund, "too often draw the attention of the United States to the fact that when our foreign trade is analyzed the net debit for the difference between our sales and our purchases

is payable to them and not to Europe. If the war prevents London from buying our securities, either the United States must buy them or our great trade with that country must fall away."

BRITISH COLUMBIA.

Quantity and value of the gold and silver product, 1912, 1913, and 1914.

[From annual report of the minister of mines for the year 1914, Victoria, British Columbia.]

Year.	Gold.				Silver.	
	Placer.		Lode.			
	Ounces.	Value.	Ounces.	Value.	Ounces.	Value.
1912	.....	$555,500	257,496	$5,322,442	3,132,108	$1,810,045
1913	.....	510,000	272,254	5,627,490	3,465,856	1,968,606
1914	.....	565,000	247,170	5,109,004	3,602,180	1,876,736

The United States vice consul reports the amount of gold and silver produced from mines of Canada during the calendar year 1914, as follows:

1914	Gold.			Silver.		
	Kilograms (fine).	Fine ounces.	Value.	Kilograms (fine).	Fine ounces.	Value.
Domestic production	24,048.50	773,161.12	$15,983,008	883,568.30	28,406,721	$15,570,377

United States consul reports that gold bullion to the value of $4,500,000 was exported from Yukon Territory during the calendar year 1914.

Nova Scotia.—Production [1] 1913: Gold-bearing ore, 7,324 short tons; gold, 2,365 ounces. 1914 [2]: Gold-bearing ore, 13,156 short tons; gold, 3,158 ounces.

CENTRAL AMERICAN STATES.

The production of gold and silver in the Central American States is usually arrived at by assuming that their export figures represent their product. The following table is compiled, for the most part, from United States import figures for the calendar year 1914:

States.	Gold.			Silver.		
	Kilograms.	Fine ounces.	Value.	Kilograms.	Fine ounces.	Value.
Costa Rica	1,000	32,121	$664,008	9,500	305,430	$168,903
Nicaragua	872	28,039	579,613	74	2,390	1,322
Honduras	419	13,465	278,348	51,579	1,658,266	917,021
Salvador	961	30,910	638,969	13,302	427,674	236,504
Guatemala	26	824	17,025	.....	.....	.....
British Honduras	.....	.....	.....	.....	.....	.....
Panama	54	1,734	35,838	719	23,128	12,790
Total	3,332	107,093	2,213,801	75,174	2,416,888	1,336,540

[1] Report of Department of Mines, 1914.

[2] United States consul general.

PRODUCTION.

Salvador.—No reliable official returns having been received from this country regarding the production of gold and silver, in accordance with the practice heretofore, the figures showing the imports from Salvador to the United States, furnished by the Department of Commerce and Labor—viz: Gold bullion, $638,969; silver bullion, $236,504—are accepted as the probable production for the calendar year 1914.

Costa Rica.—The imports of gold ore and bullion into the United States from Costa Rica during the calendar year 1914 were valued at $664,008, and silver bullion at $168,903, which amounts are accepted as the production of Costa Rica in the absence of official returns.

Nicaragua.—No official returns from this country regarding the production of precious metals during 1914 have been received. From the statement of imports prepared by the Department of Commerce and Labor the value of gold ore and bullion imported from Nicaragua into the United States amounted to $579,613, and silver bullion $1,322, which figures are accepted as approximately correct for the production of that country during 1914.

Guatemala.—According to the report from the Department of Commerce and Labor, the imports of gold contained in ore and base bullion from Guatemala into the United States during the calendar year 1914 were valued at $17,025.

British Honduras.—No report upon the production of precious metals during 1914 has been received, neither were any imports of gold ore or gold bullion reported from that country during the calendar year 1914.

Exports of gold and silver from Salvador, 1909–1913, inclusive.

[From Bulletin of the Pan-American Union, October, 1914.]

Years.	Gold, in bars.	Gold and silver amalgam, concentrates, etc.	Silver, in bars.	Coin (silver).
1909	$688,509.54	$111,581.14	$300,745.35	.....
1910	601,318.67	167,800.40	487,063.41	.....

1912	607,603.08	799,255.42	148,115.90	.....
1913	81,405.00	973,736.40	21,572.30	$15,192.00

HONDURAS.

Source.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value.
From deep mines	13,699	$273,980	1,802,318.40	[1] $903,916.89

[1] United States currency.

NOTE.—Besides the above figures there was milled 2,232 tons of gold and silver yielding rock, the value of the resulting product being $17,472 United States currency. It has been impossible to ascertain what amount of this sum represents gold and what represents silver. The first figures given—namely, 13,699 ounces of gold and 1,802,318.40 ounces of silver—were derived from 104,150 tons of gold and silver bearing rock, so that in the second case the metals were probably divided in like proportion.

PANAMA.

The importation of gold ore and bullion from Panama to the United States during the calendar year 1914 amounted to $35,838, and of silver ore and bullion to $12,790.

GOLD MINING IN NORTHEASTERN NICARAGUA.

[Consul Cornelius Ferris, jr., Bluefields, Nicaragua, May 11, in Daily Consular and Trade Reports, June 2, 1915.]

Gold mining has been carried on in northeastern Nicaragua for 18 or 20 years, but not in a manner to develop the mines. Pay ore that was in sight has been taken away without opening up ore bodies for future production. The ore is of low grade, and can be handled with profit only when operations are conducted on a large scale. The ore that could be thus handled without installing expensive machinery is now exhausted. The method of extraction has been by open-cut, or "glory-hole" work. A small amount of tunneling has been done, the greatest depth reached being 300 feet. All underground work has been done by hand. The most important mining region in northeastern Nicaragua is the Pis Pis district, where 8 or 10 claims have been worked and where at times 600 to 800 men have been employed. Since 1910 the declared exports of gold bullion from Bluefields have aggregated more than $2,500,000, the amount each year diminishing as operations became more expensive.

Geology of Pis Pis district.—The ore in the Pis Pis district is a low-grade, free-milling gold quartz, in veins varying from 15 to 20 feet in width. In exceptional cases the veins are 40 to 60 feet wide. The ore runs from $3 to $5 per ton, but in the wider veins a fair average is $6.50 per ton. Forty per cent of the value can be obtained by amalgamation; by the cyanide process 85 to 95 per cent can be saved.

In 1912 a geologist connected with a mining company visited the Pis Pis district and made an examination, from the report of which in the Bluefields American of June 23, 1912, the following salient points are taken:

The Pis Pis mining district comprises an area about 11 miles long in a northeast direction and about 1¼ miles wide. The greater portion of the district is occupied by a thick series of andesite lavas and fragmental rocks, to much of which the term augite-andesite may be applied. Scattered through this are dikes and irregular masses of hard andesite, to which also the term augite-andesite is applicable. The northeastern portion of the district is characterized by a mass of intrusive rhyolite about 4 miles long and 1 mile in maximum width.

The Pis Pis district is traversed by a remarkable system of large gold-quartz veins. They were deposited in actual open fissures, which were probably reopened from time to time, producing a fairly definite ribbon structure. The gangue is generally a fine-grained quartz, in part hard and barren and in part impregnated by sulphides. Crustification is common, and there are many crystallized geodes.

The sulphides almost invariably present below the zone of oxidation are pyrite, galena, sphalterite, and chalcopyrite, in greatly varying proportions.

The rock bordering the large veins abounds in seams of quartz extending 30 to 100 feet from the vein proper. They consist of the same kind of quartz and sulphides as the larger veins, and doubtless carry gold, but it does not appear that they have made any important ore bodies.

The large veins are in the form of a succession of lenses, which may be 50 to 100 feet long and 10 to 85 feet in maximum width, connected by short stringers of quartz 6 inches to 3 feet thick. Throughout the district the wider portions of the veins are richer in gold than the narrower portions, but the smaller veins, called hilos (threads),

2 to 5 feet thick, which are often spurs from the large veins, are generally of higher-grade ore than the large veins.

Although the veins are in strong fissures, there is not much evidence that they are due to faulting. Strong gouges are not often present along the walls, and the gouges present are as likely to be within the veins as on the walls.

Near the surface the sulphides are generally thoroughly oxidized to limonite, with irregularly distributed pyromorphyte, cerusite, and malachite in small amounts. The gold associated with the sulphides chiefly (hard white quartz is practically barren) is thus freed and may be seen in the pan as very fine grains. As a rule the most porous rock is the richest.

The mines pass rather rapidly from the oxidized to the unoxidized zone, there being no strongly marked zone of mixed sulphides and secondary oxidized minerals.

Nowhere in the district does the zone of oxidation extend very deep, rarely to 200 feet; probably 100 feet would be near the average. The humidity of the climate and the protection afforded by the stiff clay covering are the reasons for this shallow depth of oxidation. Hence, any propositions must take the sulphide ore into immediate consideration, and milling plants should be planned on this basis.

Other mining developments and prospects.—Outside of the Pis Pis district there are some gold-producing mines, but in northeastern Nicaragua they are not grouped in well-defined districts. The Pis Pis district is about 72 miles from the seacoast, and the Wawa district about 26 miles from the coast in the same latitude. In this district the ore is of the same character as that of the Pis Pis district, but the region is flat and mining is carried on through shafts. The country rock is rhyolite instead of andesite. Production and development are about to be prosecuted by Americans on an extended scale in the Linda Ventura mine in the Wawa district. The vein of this mine is 16 feet in width and runs from $7 to $8 per ton in gold and $0.50 in silver. The development consists of three shafts 50, 78, and 105 feet deep, respectively; 700 to 800 feet of drifting, and about 500 feet of open cuts. The owners are about to install a modern cyanide plant capable of treating 1,500 tons of ore per month and of saving 90 per cent of the values. A hoisting plant is to be installed capable of hoisting 150 tons per day from a depth of 500 feet. There will also be a pumping plant with a capacity of 100 gallons per minute. The Wawa district being without water power, steam will be used; there is wood for fuel.

Besides the Linda Ventura mine, further developments are soon to be undertaken, but on a smaller scale, in other mining properties in the Wawa district.

Several other mining properties might be included in a description of the mining industries of northeastern Nicaragua, notably the Topaz mine and La Luz and Los Angeles mines, which have been producing steadily and with profit for many years.

Titles to mining property—water power.—A mining claim in Nicaragua contains 12.355 acres. In locating or denouncing a claim no assessment work is required. The title from the Government is tantamount to a perpetual lease at an annual rental of $2.10 per hectare (2.47 acres) and a monthly license of $2.10 for the entire claim.

Water power.—The laws of Nicaragua provide for the denouncing of water power by individuals. The country is too new for questions relating to water-power rights to be entirely settled, and there is a possible source of trouble in conflicting claims; but the intent of the law and the policy of the Government are that water power, which is abundant nearly everywhere in northeastern Nicaragua, shall be available to develop mining and other industries.

Present equipment—Development by Canadian and American companies.—In the Pis Pis mining district there are at present three Huntington mills, three 10-stamp mills, one 20-stamp mill, and one 30-stamp mill, giving a milling capacity of 400 to 500 tons of ore per day. The future development of the mines will call for machinery for cyanide plants, transmission lines, air drills, stamp mills, and mining-camp supplies in general. There is no wood for fuel, except in the Wawa district, nor is there any coal. All milling is done by electricity generated by water power. In all the districts except Wawa the mines are opened and developed by tunneling; in the Wawa district by shafts.

An engineering party representing a Canadian company has just made an examination of certain mines that they contemplate purchasing in the Pis Pis district. They are favorably impressed with the possibilities of the district, and will begin operations on a large scale necessary to handle low-grade ores with profit, provided they are asured that the export tax on gold will not be increased. [The export tax is now approximately 53 cents an ounce.] They expect to erect and equip a plant representing an investment of $2,000,000, in addition to the purchase price of $1,000,000 for the mines now under consideration. An American company has recently acquired mining properties in the Pis Pis district, which insures further development on a large scale. The development of transportation facilities will be of prime importance to successful mining in the Pis Pis district. The plant installation of the Canadian company will include a railroad from the mines to the head of river navigation, and possibly to the coast. They say it will also be necessary for them to establish telegraphic communication from the interior to the coast, build power plants, railways, steamer lines, etc.

Modes of transportation.—The Pis Pis mining district may be reached from either Bluefields or Cape Gracias a Dios. The distance either way is about 210 miles, and it takes from a week to 10 days to make the trip. From Bluefields the route is up the coast to Prinzapolka (90 miles) by power boat and up the Prinzapolka, Banbana, and Tunky Rivers by motor boats and pitpans, as the stage of the rivers may require, to within 2½ miles of the nearest mines. By the Cape Gracias a Dios route, which may be reached from New Orleans direct, motor boats are taken for a distance of 125 miles up the Wanks River to the mouth of the Waspook; thence pitpans go up the Waspook for 60 or 75 miles to within 1 mile of the nearest mines. Pitpans are canoes hollowed out of mahogany or cedar logs. The largest are about 60 feet in length and have a carrying capacity of 20,000 to 25,000 pounds. They are paddled by Indians. The very short stage by land either way is a matter of serious consideration, especially for freight. The short overland haul is made by packing goods on mules or bullocks, or transporting them on drags. A drag consists of two long poles which are hitched to the sides of a bullock, like buggy shafts, and trailed on the ground, with a crosspiece to keep them from spreading apart. Mortars for stamp mills, weighing 6,000 pounds each, have been taken into the Pis Pis district in this manner.

For freight there is practically no choice between the Prinzapolka and Cape Gracias a Dios route. Goods taken by way of Prinzapolka are entered at the Bluefields customhouse, where they are trans-

shipped for Prinzapolka. Goods entered at Cape Gracias a Dios are transferred at once to the river boats, making one less transshipment. Perhaps the choice should be determined by the point in the mining district to which the goods are destined.

A fair average of freight charges from New York or New Orleans to the Pis Pis mining district is $0.06 per pound.

SOUTH AMERICA.

PRODUCTION.

BRAZIL.

The United States ambassador at Rio de Janeiro reports the production of gold and silver in Brazil during the calendar year 1914 as follows:

Product of 1914.	Gold.		Silver.	
	Grams (fine).	Value.	Grams (fine).	Value.
Domestic production:		*Reis.*		*Reis.*
From deep mines	[1] 4,050,824	7,211,916,000	[2] 2,385,214	126,591,000
From placer mines	[3] 9,061	15,535,000	.....	.....

[1] From Rio de Janeiro. There are only two large deep mines in Brazil, and these being nearer Rio de Janeiro than any other port their production is shipped therefrom.
[2] The product of silver continues to be practically nil, the small amount produced being that which is found mixed with the gold in the mines.
[3] From Maranhao.

The gold product of 4,050,824 grams is equivalent to 130,234 ounces, fine, of the value of $2,692,171.20, and the gold product of 9,061 grams is equivalent to 291.31 ounces, fine, of the value of $6,021.90. The silver product of 2,385,214 grams is equivalent to 76,684.63 ounces, fine, whose value is given at 126,591,000 reis, which is equal to $69,169.

No statistics are published (or collected) as to the amount of gold and silver produced by Brazilian mines. An approximate figure can, however, be arrived at from the export figures, discounting therefrom a considerable amount (almost exclusively the product of "placer" mines), which is used in the country in the manufacture of jewelry and upon which no figures are available.

COLOMBIA, 1914.

Product of 1914.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
Domestic production	14,248,377	$4,678,586.98	7,360.712	$194,275.29

BRITISH GUIANA.

The United States consul reports as follows regarding the production of gold during the calendar year 1914:

1914	Kilograms (fine).	Ounces (fine).	Value.
Domestic production:			
From placer mines	1,427.403	45,893.137	$948,695.37
From dredging	267.547	8,602.018	177,819.50
Total	1,694.950	54,495.155	1,126,514.87

The yield of gold from the several methods of working in existence in the colony (British Guiana) is shown in the following table, which also gives the increase and decrease in 1913–14 as compared with 1912–13:

Methods.	1912–13	1913–14	Increase.	Decrease.
	Ounces.	*Ounces.*	*Ounces.*	*Ounces.*
Placer washing	38,472	[1] 72,341	33,869	.....
Dredging	12,033	10,122	.....	1,911
Hydraulicking	823	242	.....	581
Quartz milling	437	.....	.....	437

[1] Includes 511 ounces obtained by the Minnehaha Development Co. (Ltd.) from crushing quartz with small mill. Royalty was paid on this gold at usual rate of 70 cents per ounce.

NOTE.—A small Tremaine hammer mill was operated by the Minnehaha Development Co. (Ltd.) on their hill claims in the Minnehaha Creek and produced 511 ounces of bullion.

Comparative statement showing weight and value of gold obtained in British Guiana for a series of years.

[From report of the lands and mines department, 1913–14.]

Years.	Gold.		Years.	Gold.	
	Weight.	Value.		Weight.	Value.
	Ounces.			*Ounces.*	
1884	250	$4,375.00	1900–1901	114,102	$1,996,786.36

DUTCH GUIANA.

[Reported by the American consul at Georgetown, British Guiana.]

Gold produced during the calendar year 1914:

Gold.	Kilograms.	Value.
Domestic production, from placer mining	918.5945	$503,389.60

There was no silver produced.

Assuming the value to be correct, the production by calculation would appear to be 757 kilograms fine, equal to 24,351.471 fine ounces.

DENMARK.

There are no mines in Denmark nor in the colonies.

GERMANY.

The secretary of the United States embassy at Berlin reports to us that the collecting of statistics of the production of gold and silver from mines in Germany for 1913 and 1914 are not yet completed and no reports regarding the product of gold and silver from mines in German colonies have been recently made.

The American ambassador at Berlin reports that the gold and silver production of Germany for 1911 was 117.54 kilograms of fine gold and 155,044.39 kilograms of fine silver, from native ores. The weight of the gold is equivalent to 3,778.911 fine ounces, representing $78,117, and the silver is equivalent to 4,984,677 fine ounces, of the commercial value of $2,691,726. In the absence of detailed information the figures for domestic production for 1911 are repeated for 1912, the silver valuation being $3,064,081.

The smelting-house product of gold and silver in the years 1911 and 1912 was as follows:

Fine gold extracted.	Weight.	Value.	Fine silver extracted.	Weight.	Value.
	Kilograms.	*Marks.*		*Kilograms.*	*Marks.*
1911	4,967.090	13,874,000	1911	439,579.99	32,133,000
1912	7,730.470	21,574,000	1912	595,469.40	48,886,000

The figures of 1912 are higher because in 1912 the amounts obtained from old material and foreign by-products were taken account of, while in former years only the output of inland and foreign metal and scrap was counted.

The separation of the different sources from which the gold and silver is obtained is no more a feature of the statistical reports upon the subject.

The amounts of gold and silver obtained by smelting in the German colonies are still small. As an example, the output in gold from the

Kironda Gold Mining Co., of Sekeeke (German East Africa), is given as follows:

Period.	Quartz.	Fine gold separated.		
		In mills.	By chemical processes.	Total.
	Tons.	*Kilograms.*	*Kilograms.*	*Kilograms.*
April to September, 1911	3,943	137	40	177
October, 1911, to March, 1912	3,189	106	33	139
April to September, 1912	2,917	50	15	65

GREAT BRITAIN.

PRODUCTION.

The United States consul general reports the production of gold and silver in the United Kingdom in 1913 as follows:

Fine gold.—26.87 kilograms, valued at £3,670 (equivalent to 863.977 ounces, fine, of the value of $17,860.05); 3.82 kilograms of the above quantity were obtained by ordinary (not deep) mining and from quartz-bearing veins, and 23.05 kilograms were obtained by deep mining from auriferous copper ores.

Fine silver.—4,293.83 kilograms (0.925 fine), valued at £15,954 (equivalent to 128,543.27 ounces of the value of $77,640.14). Of the above quantity, 3,986 kilograms were obtained from lead ores, 307 kilograms from copper ores, and 0.83 kilograms from gold ores.

The value of fine silver was calculated at the rate of $27\frac{9}{16}$ pence (27.5625 d.) per ounce, which was the average price of standard silver in the London market for the year 1913.

The gold production of Great Britain, as taken from the Engineering and Mining Journal, New York, July 3, 1915, was: Gold ore—1913, 4 long tons; 1914, 47 long tons.

ITALY.

The United States ambassador reports that in the year 1914 no gold was produced from the mines, but there were recovered from 260 tons of auriferous pyrites 186 grams of gold and 100 grams of silver per ton, valued at 111,860 lire ($21,589).

In smelting works they treated native ores containing 15,254 kilograms of fine silver, valued at 1,467,520 lire ($283,231).

About 13,000 tons of argentiferous lead was produced during 1914, containing 325 grams of silver per ton.

No gold or silver was produced in Italian colonies during 1914.

Production of silver in 1914.

[From Supplement to Commerce Reports, August, 1915.]

Year.	Kilograms.	Value.
1914	4,754	$88,687

[Translation from L'Économiste Européen, Paris, Aug. 20, 1915.]

THE PRODUCTION OF GOLD IN RUSSIA.

The following table shows the production of 1914, as compared with that of the three preceding years, for the different producing districts:

Year.	East Siberia.		West Siberia.		Ural.		Total.	
	Kilograms.	Value.	Kilograms.	Value.	Kilograms.	Value.	Kilograms.	Value.
1911.....	34,971.300	$23,241,926	3,095.820	$2,057,482	2,178.540	$1,447,858	40,245.660	$26,747,266
1912.....	31,023.720	20,618,364	3,292.380	2,188,116	3,112.200	2,068,368	37,428.300	24,874,848
1913.....	33,136.740	22,022,677	3,357.900	2,231,660	3,390.660	2,253,433	39,885.300	26,507,770
1914.....	37,067.940	24,635,353	3,341.520	2,220,774	2,604.420	1,730,898	43,013.880	28,587,025
Total...	136,199.700	90,518,320	13,087.620	8,698,032	11,285.820	7,500,557	160,573.140	106,716,909

It is remarkable that the production of gold in eastern Siberia had an increase for the two last years of 369 poods (6,044.220 kilograms).[1] The production in 1914 surpassed that of 1913 by 240 poods (3,931.200 kilograms), which is 11.9 per cent. On the contrary, the production of the Urals had a decrease of 48 poods (786.240 kilograms), or 23.2 per cent. The production of chemically pure gold in 1914 was 2,207 poods (36,150.660 kilograms), against 2,036 poods (33,349.680 kilograms) in 1913, being an increase of 171 poods (2,800.980 kilograms).

The gold resulting from private refineries was not known. It is supposed that it was the same as in 1913, viz, 971 poods (15,904.980 kilograms) of chemically pure gold. Consequently, the total production of gold in Russia in 1914 was 3,178 poods (52,053.640 kilograms), against 3,007 poods (49,254.660 kilograms) in 1913.

Product of gold from Russian mines.

[Reported by Mr. Dometrius Anthony Magula, from the Russian mint.]

Year.	Weight.				Value.	
	Poods.[1]	Pounds.	Zolotniks.	Doli.	Rubles.	United States currency.
Fine gold:						
1911.....	3,176	14	71	69	67,202,510.80	$34,609,293
1912.....	2,917	27	76	82	61,729,745.72	31,790,819

[1] 1 pood=40 pounds; 1 pound=96 zolotniks; 1 zolotnik=96 doli.

(Full information as to production of gold in Russia is not available. The information given above is the best obtainable.)

Gold and silver product of Russian mines.—As officially reported from the United States Embassy, Petrograd, Russia.

[1] 1 pood is equal to 16.380 kilograms.

In 1913 Government refineries, smelting establishments in the Altai, and individuals remitted to the Russian mint gold and silver as follows:

Classification.	Ounces.	Value.	
		Rubles.	United States currency.
In fine gold	1,065,844.70	42,818,510.17	$22,051,533
In fine silver	144,088.70	249,032.89	128,252

In 1913 private refineries treated 970 poods 9 pounds 18 zolotniks, equivalent to 560,792.80 ounces of fine gold, valued at 20,527,075.41 rubles ($10,571,444). For the amount of fine silver treated by the said refineries the last information we are in possession of is of the year 1910, which is given as 540 poods 29 pounds.

Attention is called to the fact that in Russia the production of gold and silver is entirely free. It is not obligatorily remitted to the mine, but is sent to any desired destination. The gold remitted to the mint is almost totally appropriated to the bank of the State for necessities of the monetary circulation. The gold remitted to private reduction works (or refineries) is partly sent to foreign countries, and principally goes into the reserves of banks of issue; the other part remaining in the country is appropriated to industrial works.

No special department of statistics exists, and the data are scarce, dependent upon the vast territory and different places from whence statistics come. There are no special statistical employees.

FINLAND.

The United States agent at Helsingfors reports the following regarding the amount of gold produced from mines in Finland during the calendar eyar 1912 (there were no mines in operation during 1911 and 1913):

Derivation.	Weight.	Value.
	Grams.	*Finnish marks.*
From placer mining (wash gold); nothing from solid rock	1,477	4,666 ($900.54)

SERVIA.

As reported by the American vice consul in charge at Nish:

Product, 1914.	Gold.		Silver.	
	Kilograms (fine).	Value.	Kilograms (fine).	Value.
		Francs.		*Francs.*
Domestic production:				
From placer mining	40.124	137,947 ($26,624)		
From copper ores	100.600	463,040 ($89,367)	379,826	34,425 ($6,644)

ASIA.

PRODUCTION.

BRITISH INDIA

The United States consul general reports the product of gold and silver in British India during the calendar year 1914, as follows:

Product for 1914.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
Domestic production, from placer mining	18,892.32	*Rupees.* 35,075,329 ($11,378,437)	7,354.46	*Rupees.* 403,440 ($130,875)

Gold equal to 17,120 fine kilograms or 550,432 fine ounces and silver contents 7,354 fine kilograms or 236,440 fine ounces.

JAPAN.

The United States ambassador reports the production of gold and silver in Japan during the calendar year 1913, as follows:

Source.	Gold.		Silver.	
	Weight.	Value.	Weight.	Value.
	Kilograms.	*Yen.*	*Kilograms.*	*Yen.*
From deep mines	5,436	7,154,069	146,279	5,635,124

WEST AFRICAN GOLD MINES.

[From the Mining Journal, London, May 1, 1915.]

In point of productiveness the gold fields of West Africa continue to show excellent progress, the value of the total output for 1914 amounting to £1,727,044 ($8,404,660), which compares with £1,634,700 ($7,953,268) for 1913, £1,497,179 ($7,286,022) for 1912 and £1,069,442 ($5,204,440) for 1911. Since 1880 the colony has contributed upward of £13,750,000 ($66,914,375) to the world's gold supply, and it is significant that of this amount about £6,000,000 ($29,199,000), or 44 per cent, has been the result of the last four years' operations. The following table shows the monthly returns for 1914:

Month.	Fine ounces.	Estimated value.	
		Pounds sterling.	United States currency.
January	30,995	128,862	$627,107
February	29,929	123,169	599,402
March	31,795	131,392	639,419
April	32,063	131,697	640,903

Total	419,510	1,727,044	8,404,659

MINING IN THE GOLD COAST.

[From the Mining Journal, London, Dec. 5, 1914.]

The Government returns for West Africa last year were 388,126 fine ounces, of which 9,307 fine ounces were from dredging and the rest from lode mining. The company's returns, as published currently in our columns, gave the output as 397,679 fine ounces. The total for last year was 35,169 ounces, better than in 1912, and constituted a record for the colony, which, however, will be surpassed by the figures for this year, which should approximate to 405,000 ounces.

Among individual producers, Rhodesia, the Gold Coast, and Ontario are the only British fields from which an increase is to be expected this year, and, with the possible exception of Russia, probably the only fields in the world to show an increase. A feature of the Gold Coast mines is that they are, as things go to-day, comparatively high grade. On the 713,638 tons treated last year an extraction of 10.62 pennyweights was obtained. The conglomerates of the Taquah field furnished about one-third of the total, with an average grade of 10.21 pennyweights, and quartz reefs about two-thirds, with an average extraction of 10.86 pennyweights. These figures were all higher than those of the preceding year. Turning to individual companies producing over 1,000 ounces, the results are most conveniently shown in tabular form as follows:

Principal producers.	1912	1913
	Ounces.	*Ounces.*
Ashanti Goldfields	114,456	105,838
Prestea Block A	69,945	91,244

April	70,336.59	11,404.22
May	68,982.72	10,592.10
June	72,645.82	10,961.72
July	76,687.48	11,248.38
August	75,998.95	11,785.65
September	74,141.66	14,756.61
October	81,165.02	19,131.10
November	74,739.94	15,022.62
December	73,888.82	13,232.59
Total	854,479.82	150,792.79

The value of the yield of gold from Southern Rhodesia for the year 1914, viz, 854,479 fine ounces, was £3,580,209 ($17,423,087). This is an increase of 164,526 ounces in weight and £646,941 ($3,148,338) in value as compared with the year 1913.

JOHANNESBURG.

[By Consul Edwin N. Gunsaulus, in supplement to Commerce Reports, June 25, 1915.]

Taking the Union of South Africa as a whole, the trade of 1914 has been disappointing as compared with the past seven or eight years of successive increases in both imports and exports which have marked the country's steady progress along commercial and industrial lines, and this consular district, which possesses the country's biggest industrial and financial asset, the gold-mining industry (in a sense the trade regulator of the entire country), has felt the influence of the year's diminished trade.

Several definite causes have contributed to the sharp decline in the import and export trade of the year under review, chief of which of course, is the war, with the resultant insurrection in the Transvaal and Orange Free State, which is directly responsible, in a large measure, for the great trade shrinkage during the latter part of the year, while the strikes and other labor difficulties experienced in 1913 and at the beginning of 1914 had a pronouncedly adverse effect upon trade and industrial conditions during the first months of 1914.

Large amount of development work held up.—As an accompaniment of the railway and general strike in January, 1914, the Witwatersrand was placed under martial law, and although the strike was declared off on the 23d of that month, the labor agitation had a depressing

effect upon and put a stop to a large amount of development work, intended to be put through, by the withdrawal and withholding of money for capitalistic enterprises until the return of normal conditions.

Just as the country was beginning to recover from this industrial check, and when the prospects seemed bright for a speedy resumption of industrial and commercial activity, the war broke out, causing an indefinite postponement of mining schemes and development projects previously planned, as well as retardment and curtailment of much Government and municipal construction work.

The labor and industrial troubles and the subsequent war outbreak seriously affected the building trade in Johannesburg and other cities of the district, which had previously shown unusual activity, thereby causing the withholding from circulation of large sums of money and resulting in a marked decrease of purchase of building material and furnishing, practically all of which are imported.

Gold mining not affected.—Notwithstanding the labor troubles experienced at the commencement of the year and the unsettled conditions arising from the European crisis, it is a significant fact that the big gold industry of the Rand, as well as that in Rhodesia, has been practically unaffected in its operations and output, a situation that has exerted a powerful influence in maintaining a trade equilibrium along fairly normal lines in the midst of other industrial and commercial upheavals. The Government receives 10 per cent of the gross profits of the gold mines, a portion which amounts to $5,000,000 per annum.

The prompt and effective measures secured by the chamber of mines through the cooperation of the imperial and local governments, aided by the local and English banks, for the guarding of the gold-mining interests, especially as regards financing, were fully set forth in a previous report published as a supplement to Commerce Reports, January 18, 1915, and need only to be briefly referred to in this report.

Arrangements for disposing of gold supply.—At the outbreak of the war the usual weekly shipments of raw gold from the mines of the Transvaal to London were stopped. The important question of the disposition of the gold and of obtaining its equivalent in money for the industry immediately arose. This was happily met by an arrangement under which the gold was delivered to the larger of the local banks, where it was assayed, and schedules of the bars, with certificates of assay, were sent to the Union Government, which assumed responsibility as to the value, the amount of which was cabled to the high commissioner of the union in London. Under his guaranty the Bank of England advanced to the London offices of the South African banks 97 per cent of the value of the gold, which was held by the latter in the name of the Union Government to the order of the Bank of England. By this method, although the gold remained stored in Johannesburg banks, the financing of the mines was kept up to normal, both as concerns working costs and dividends, thus enabling them to go ahead as usual.

Provision for shipments of mining supplies—Year's gold output.—Another matter of importance to the gold mines was that relating to supplies, especially regarding the three essentials—cyanide, mercury, and zinc. A committee of the chamber of mines, designated as the central buying committee, was appointed and succeeded, in conjunction with a London committee, in entering into large contracts for the supply of these articles, sufficient quantities being insured to supply the industry during the years 1914–15, and longer, if necessary.

The total gold output of the Transvaal for the year 1914, as compiled by the department of mines and industries of the Union of South Africa (statistics for the month of January, 1915), was 8,394,322 fine ounces, valued at $173,523,885, as compared with 8,798,335 fine ounces, of a value of $181,875,456, in 1913. Of the year's total gold output of the entire Union of South Africa, amounting to $173,559,975, all but about $36,000 in value was the product of the Transvaal.

The value of gold exported from South Africa during the years 1913 and 1914 was as follows:

Classification.	1913	1914
Gold concentrates or slag	$190,508	$108,917
Raw gold:		
Produce of the Union	182,928,810	99,977,210
Produce of South Rhodesia	14,050,563	10,616,274

FEDERATED MALAY STATES.

Gold exports, 1913.

	Ounces (troy).	Value at £3 17s. 6d. per ounce.
Gold exported from the Federated Malay States	13,133	£50,891 ($247,661.05)
Gold reported to have been bought by gold buyers in Perak	1,842	£7,138 ($34,737.08)

Gold production of the Federated Malay States, 1898 to 1914, inclusive.

AUSTRALASIA.

AUSTRALIA.

The American consul at Melbourne, Victoria, Australia, reports as follows regarding the production of gold and silver in the State of Victoria during the calendar year 1914:

GOLD.

Product for 1914.	Ounces (fine).	Value.	
		Pounds.	United States currency.
Domestic production	[1] 413,218	£1,755,236	$8,541,856

[1] Full details of production not recorded, but quartz mines produced 282,596 ounces, fine, and alluvial mines, 130,622 ounces, fine.

No silver mines in Victoria, but silver extracted from gold at mint during 1914 amounted to 13,460 ounces, fine, valued at £1,540 ($7,494).

NEW ZEALAND.

Product for 1914.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
Domestic production	7,090.320	£895,367 ($4,357,303)	18,636.45	£62,085 ($302,136)

TASMANIA.

Product for 1914.	Gold.	
	Kilograms (fine).	Value.
Domestic production [1]	817.256	$542,493

[1] No statistics are kept as to sources of production.

Silver-lead ore valued at $468,177 was produced in Tasmania. Silver contents not available.

AUSTRALIAN GOLD PRODUCTION.

[From The Economist, London, Mar. 6, 1915.]

The gold production of the Commonwealth during 1914, writes a Melbourne correspondent, amounted to 2,049,957 ounces, fine, value £8,707,658 ($42,375,817.66), as against 2,205,456 ounces, fine, value £9,368,175 ($45,590,223.64), for the previous year, the value showing a decrease of £660,517 ($3,214,405.98). Assuming the New Zealand output provisionally at 340,000 ounces, fine, the grand total for Australia and New Zealand for 1914 is 2,389,957 ounces, fine, against 2,549,051 ounces, fine, the value being £10,151,885 ($49,404,148.35), against £10,827,673 ($52,692,870.65), a decrease of £675,788 ($3,288,-722.30). A steady decrease has been in progress for the past decade. In western Australia a slight recovery took place in 1913, but this was followed by a further decline in 1914, when the production in that State was 1,232,977 ounces, fine, against 1,314,043 ounces, fine. Out of the total production of £10,827,673 in Australia last year about £7,500,000 has been added to local stocks. During the first half of the year the heavy exports of produce and the extensive borrowings of various Australian governments in London kept exchange in a position favoring the retention of gold; while, since the war altered the balance of trade, the war-risk insurance rendered gold shipments impracticable, though a substitute to a certain degree has been found in deposits with the Government in trust for the Bank of England, the actual amount of which is not published. The heavy stocks of gold now held in Australia mean a very strong financial position.

WORLD'S PRODUCTION.

The following table shows, by calendar years, the production and value of gold and silver in the world since 1860:

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1860	6,486,262	$134,083,000	29,095,428	$39,337,000
1861	5,949,582	122,989,000	35,401,972	46,191,000
1862	5,949,582	122,989,000	35,401,972	47,651,000

Production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint.]

Period.	Gold.				Silver.				Percentage of production.			
	Annual average for period.		Total for period.		Annual average for period.		Total for period.		By weight.		By value.	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value in standard silver dollars.	Gold.	Silver.	Gold.	Silver.
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$1,954,000	42,309,400	$54,703,000	11	89	66.4	33.6

GOLD AND SILVER PRODUCTION AND MOVEMENT IN 1914.

[From the Commercial and Financial Chronicle, New York, Feb. 27, 1915.]

Much as the prevailing conditions on the European Continent have exerted an adverse influence in many ways, they tended in only a minor degree to diminish the volume of new gold made available for the world's use in 1914. The year witnessed a further moderate contraction in the amount of gold mined, an outcome due in greatest measure to developments entirely dissociated with the war situation in Europe. In fact, the falling off is not to be accounted for in any general way, but is rather the result of several independent causes. For instance, in Africa the disorganization of the working force of the Transvaal following the strike in June of 1913 and the further labor troubles in January 1914 (starting with railway employees that time), accounts for a drop in production in the world's premier field that gains elsewhere in Africa could not overcome. The loss in Australasia is merely the oft-told story of poorer-grade ores in the lower levels of the mines, and the diminution in output in Mexico naturally follows the chaotic conditions there existing as a result of the continutaion of the warfare of the various factions contending for the control of the Republic. These various countries and Russia, France, and Austria show collectively a loss in yield for the year that satisfactory gains in the United States and Canada and small additions in several countries of minor importance as producers fail to counterbalance.

The United States, rather unexpectedly it might be said, exhibits a fair increase in yield over 1913, according to the early estimate issued jointly by the Bureau of the Mint and the Geological Survey, but the result reported is below 1912 or several earlier years. The gain over 1913 is due in greatest measure to enhanced yields in California, Colorado, and Alaska, the better outcome in the last named being ascribable to the greater abundance of water than in the previous year. Nevada, on the other hand, which only a few years ago seemed to threaten the supremacy of California and Colorado as producers, suffered a further drop in yield as a result of poorer-grade ores mined, and returns an output only a little more than half that of the Pacific coast State.

The strike in the Transvaal mines, which began toward the close of June, 1913, the causes for which were referred to quite fully by us a year ago, it will doubtless be remembered, resulted in a serious loss in the working force of the mines and a disorganization of labor generally, with a consequent decided decline in output in the last half of that year; but some improvement in the situation was discernible before the close of December, and hopes were entertained that a near approach to normal operations might be attained before 1914 had very far progressed. Early in January, however, the aspects of affairs changed materially. In fact, on January 13 the railway men's general secretary, without even waiting for a ballot on the subject or giving the commission time to consider the grievance, called a strike, with the support of the trades council, whose leaders

repudiated the settlement made the previous July (despite important measures the Government was preparing in the interest of workingmen), and initiated a universal down-tools policy. Profiting by previous experience, the Government immediately handled the situation in such a way that the movement was effectively and quickly suppressed. In other words, martial law was proclaimed and the labor leaders were expelled from the country, this being considered to be for the best interests of all concerned, the union included. Month by month during the year the labor force increased in number, but efficiency being lacking, production continued low as compared with a period of normal conditions like 1912 or the first half of 1913. Outside the Transvaal a moderate increase in yield is to be reported for 1914, but for the whole of Africa the output at 9,908,940 fine ounces exhibits a decline of 131,478 fine ounces from the previous year and 385,714 fine ounces from 1912.

Canada further increased its production of gold in 1914, according to the preliminary approximation of Mr. McLeish, the added yield coming largely from British Columbia, which, through development work there, is quite steadily gaining in prominence among the provinces of the Dominion as a producer of the precious metals. The Colar field of India, too, made a slightly greater contribution to the aggregate new supply in the late year, and such information as is at hand indicates that Central America, South America, and Japan did likewise. Russia (including Siberia), France, and Austria, as already intimated, manifestly contracted their output of gold. In fact, it is highly probable that such estimates as have been current since the year closed, including those incorporated in our compilation, may, under the conditions existing in those countries, be found to be somewhat excessive when final returns are received a year or two hence. Whatever may have been the situation before the 1st of August, it is evident that since that date the war has been a serious setback. Somewhat similar conditions in Mexico have hampered mining operations there with a result about as indicated below, and in Australasia the history of 1914 is merely a repetition of that of every year since 1905—decreasing products in about every Province. Looking at recent Australasian returns, it is difficult to realize that at one time that country was the foremost gold producer of the world and much was expected of its mines. But along in 1906 poorer-grade ore began to be encountered as the lower levels were reached, and since that time the output has steadily fallen off, until in 1914 it reached less than 2,500,000 fine ounces, against over 4,333,333.33 nine years earlier.

Following is a compilation of the gold product in some of the principal gold-producing countries of the world for 1914:

Producing country.	Fine ounces.	Value.
Australia	2,393,969	$49,487,648
Africa	9,908,940	204,835,626
United States	4,490,336	92,823,328
Canada	822,376	16,999,992
Russia	967,500	19,999,966
Mexico	870,827	18,001,561
Other countries	2,277,347	47,076,862
Total	21,731,295	449,224,983

According to the above compilation the gold production of the world in 1914 was approximately 21,731,295 fine ounces, valued at $449,224,983, or a decline of 440,391 fine ounces, or $9,103,675, from the previous year, and a falling off of 834,402 fine ounces, or $17,248,592, from 1912. The latest total, moreover, is the smallest since 1908, but between 1904 and 1908 production advanced sharply as a result of the practical doubling of the output of the African mines. It is, furthermore, a fact that while in the last decade the annual yield of gold has risen from 16,739,448 fine ounces to 21,731,295 fine ounces, or a gain of 4,991,847 fine ounces, the advance in Africa has been from 4,163,541 fine ounces to 9,908,940 fine ounces, or an increase of 5,745,399 fine ounces. It is patent, therefore, that the world outside of Africa contributed to the aggregate new supply of gold some 750,000 fine ounces less in 1914 than 10 years earlier.

We have for a number of years past made the tracing of the annual production of gold to its place of ultimate lodgement a feature of this review, and have within certain limits met with very gratifying results. This year, however, the conditions in Europe are such, on account of the war, that investigations meet with considerable difficulty. In the first place, it is to be noted that the principal European banks within the year increased their gold holdings largely—Germany to the extent of $225,000,000, England $170,000,000, France $145,000,000, Russia $50,000,000, and the remaining institutions, collectively, as far as we can learn, about $100,000,000, or $690,000,000 for all. Here alone we have a gain of some $241,000,000 greater than the total production of gold for the year. As regards the Bank of England the gain of $170,000,000 is quite fully explained by the direct net imports of the metal into Great Britain ($100,000,000) and the amount exported from the United States to Canada ($71,000,000) for the account of the bank and included in its weekly statements. The increase in the holdings of the Bank of France, too, can be accounted for by the considerable amount of gold ($85,000,000) sent thence from here and the $60,000,000 received from Great Britain. But the addition of $225,000,000 to the stock held by the Bank of Germany between January 1, 1913, and January 1, 1914, finds no such means of explanation. It clearly in large part represents gold that had previously been hid away, including that in the "war chest." As against the enormous gain in gold by the European banks, it is to be stated that the United States visible stock as compiled by Treasury Department decreased $107,000,000 during the year. Disregarding the $225,000,000 gain by the Bank of Germany, we have for the remaining European institutions an enlargement of gold holdings of $465,000,000, from which should be deducted the $25,000,000 net received by Great Britain from India, Egypt, and South America, etc., and the $107,000,000 decline in the holding of gold in the United States, leaving net $333,000,000. There would remain, therefore, $116,000,000 to represent the amount of gold used in the arts, etc., a total some $50,000,000 less than most recently estimated as the annual absorption, but under existing conditions apt to be over rather than under the mark.

OFFICIAL DETAILS FROM GOLD-PRODUCING COUNTRIES.

From the returns we have obtained from the mines, mint bureau, and other official and semiofficial sources respecting gold mining in 1914 we are able to deduce the following:

United States.—A moderate augmentation in the yield of gold from the mines of the United States is foreshadowed by the preliminary estimate issued jointly by the Bureau of the Mint and Geological Survey, the output being put at 190,552 fine ounces more than in 1913, but 30,383 fine ounces less than in 1912. The increase in 1914 is contributed in greatest measure by California, Colorado, and Alaska, where there were gains of 58,363 fine ounces, 85,691 fine ounces, and 31,380 fine ounces, respectively. Montana and the Philippines, however, also show very satisfactory increases, and production advanced moderately in South Dakota, Arizona, Oregon, and New Mexico. Nevada, on the other hand, showed a further important decline, due mainly to the poorer quality of the ore treated in leading fields; and the results in Utah, Washington, and Idaho fell below those of the previous year. The ounces and values as estimated for each State in 1914 contrast as follows with the final figures for 1913 and 1912:

Gold production in United States, 1912, 1913, and 1914.

State and Territory.	1912		1913		1914	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Value.

[a] See page 219 for final United States gold production figures.

Africa.—A reduction in the volume of gold secured from the mines of Africa in 1914 is indicated by the returns at hand, an outcome of the disorganization following the strike in the Transvaal in June–July, 1913, and the recrudescence of labor troubles in January of 1914. Each month of the first half of the year gave a smaller return from the Rand workings than in the corresponding period of the previous year, but before the close of the period conditions began to improve and in the closing months production approached close to normal. In the first six months the loss in output was no

less than 546,920 fine ounces as compared with 1913, but for the last half of the year the gain was 150,391 fine ounces. For the twelve months, therefore, the falling off reached 396,529 fine ounces, and contrasted with 1912 there was a decline of 719,999 fine ounces. The output of the Rand in 1914 was as follows:

Witwatersrand district.

Month.	Fine ounces.	Value.	
January	621,902	£2,768,470	$13,472,759
February	597,545	2,660,186	12,945,795
March	657,708	2,917,346	14,197,264
April	655,607	2,904,924	14,136,813
May	689,259	3,059,340	14,888,278
June	688,232	3,049,558	14,840,674
July	703,136	3,111,398	15,141,162
August	684,607	3,024,037	14,716,476
September	677,063	2,982,630	14,514,969
October	703,985	3,116,754	15,167,683
November	685,450	3,040,677	14,797,455
December	669,075	2,952,755	14,369,582
Total	8,033,569	35,588,075	173,188,910

Districts of the Transvaal outside of the Rand did not do quite as well as a year earlier, but a better showing was made by Rhodesia, where production increased from 689,934 fine ounces to 854,538 fine ounces. Further progress is to be noted in West Africa and a small addition is indicated in Mozambique, Madagascar, etc. Finally, the yield of the whole of Africa was 131,478 fine ounces less than in 1913, this following a drop of 254,236 fine ounces in 1913 from 1912. The total production in all districts of Africa in 1914 was 9,908,940 fine ounces, valued at £42,090,635 ($204,834,075).

Australasia.—In practically every district of Australasia the declining tendency in production, which has been an annual feature since 1905 (due largely to the poorer grade ores in the lower levels as well as to some extent to exhaustion), continued in 1914, the latest year's yield being not much more than half of that of nine years earlier. The subjoined statement indicates the product of each colony during the year 1914:

Colony.	Fine ounces.	Value.
Victoria	409,694	$8,469,112
New South Wales	[1] 139,000	2,873,380
Queensland	220,064	4,549,118
Western Australia	1,245,211	25,740,753
New Zealand	[1] 325,000	6,718,335
South Australia	[1] 15,000	310,077
Tasmania	[1] 40,000	826,872
Total	2,393,969	49,487,648

[1] Partly estimated.

India.—The returns from the Colar field, from which very much the greater part of the East Indian product is obtained, denote that the yield of the country in 1914 was slightly greater than in the preceding year, development being noted in a majority of the mines. The details for 1914 are appended herewith:

Gold production from the principal mines of East India.

Location of mine.	Fine ounces.	Value.
Champion Reef	137,255	$2,837,308
Ooregum	96,261	1,989,888
Mysore	230,665	4,768,261
Nundydroog	79,924	1,652,173
Balaghat	17,403	359,751
North Anantapur	13,350	275,968
Hutti, etc	27,045	559,069
Total	601,903	12,442,418

Russia.—With very little early information of a reliable nature procurable from Russia in a normal year, it is a safe inference that under existing conditions the difficulties in that direction would be vastly increased. It is in fact true that as regards gold-mining operations in 1914 practically no data is available at this time. The situation, however, is such that a loss in production must have occurred in 1914. We therefore hazard a tentative estimate of $20,000,000, or 967,500 fine ounces, as the output of the Russian mines in the late year, or about 241,877 fine ounces less than in 1913. Details for the last 13 years are appended:

Russia's production.

Year.	Ounces.	Value.	Year.	Ounces.	Value.
1902	1,100,000	$22,739,013	1909	1,566,448	$32,381,300
1903	1,191,580	24,632,200	1910	1,721,163	35,579,600
1904	1,199,857	24,803,200	1911	1,555,333	32,151,600
1905	1,078,356	22,291,600	1912	1,073,875	22,199,000
1906	943,056	19,494,700	1913	1,200,327	25,800,000
1907	1,290,840	26,684,000	1914	967,500	20,000,000
1908	1,357,027	28,052,200			

Canada.—Continued development of mining in British Columbia and better results in the Yukon district account for the increasing production of gold in Canada the last few years. As regards the 1914 yield of the mines, Mr. John McLeish, chief of the division of mineral resources and statistics, department of mines of Canada, was at first inclined to approximate it at $15,750,000, or a little under the outturn of 1913, but late estimates from British Columbia are of a nature to lead him to state in effect that, if they are approximately correct, $1,250,000 should be added to his original estimate. We have therefore adopted as the preliminary total for the year 1914 $17,000,000, or 822,376 fine ounces. This is the best result since 1903. The exhibit for the last 15 years is as follows:

Year.	Ounces.	Value.	Year.	Ounces.	Value.
1900	1,350,475	$27,916,752	1908	476,112	$9,842,100
1901	1,183,362	24,462,222	1909	473,592	9,790,000
1902	1,003,359	20,741,245	1910	493,708	10,205,835
1903	911,118	18,824,500	1911	473,159	9,781,077
1904	793,350	16,400,000	1912	611,885	12,648,794
1905	700,800	14,486,800	1913	784,525	16,261,131
1906	581,660	12,023,932	1914	822,376	17,000,000
1907	405,553	8,382,780			

Other countries.—With the sources of information and means of communication restricted as a result of the war in Europe, it is obvious that from other sections of the Continent, as well as from Russia, no reliable data as to gold production can be secured now. France and Austria are the only countries to be credited with a mentionable yield, but with both engaged in the war nearly half of the year it must have decreased quite materially. In Mexico, too, a further falling off in output is to be predicated under the conditions existing. South and Central America and Japan and China also, on the other hand, seem to have contributed a little more largely to the world's new stock of gold in 1914 than in 1913. But "Other countries" collectively, and not including Mexico, which appears separately in our compilation, have apparently decreased their production by about 50,000 fine ounces.

Estimated production of silver in principal countries of the world during 1914.

Country.	Fine ounces.	Commercial value.[1]
United States	67,929,700	$37,573,277
Mexico	40,000,000	22,124,800
Australia	13,800,000	7,633,056
Other producing countries	77,000,000	42,590,240
Total	198,729,700	109,921,373

[1] Commercial value calculated at the average price of silver for the year 1914, viz, $0.55312.

SOME INTERESTING GOLD STATISTICS.

[From the Bankers' Magazine, London, February, 1915.]

Each year the annual letters or circulars issued by the leading bullion brokers with regard to such matters as the course of gold and silver during the year become increasingly important by reason of the exhaustive character of the survey which is made of the general situation. This year the circular issued by Messrs. Samuel Montagu & Co., the well-known bankers, is of special interest with regard to the particulars given concerning gold, though there is also a mass of useful information with regard to silver.

After a reference to the disturbed political conditions of the year, culminating in the outbreak of the war, Messrs. Montagu refer to the manner in which the currency system of Great Britain passed through the fierce ordeal of last August with complete success. "On no occasion," they add, "did gold fail to be readily available on the presentation of currency notes, notwithstanding that the stock of gold at the disposal of the Bank of England was extremely small compared with that of other European State banks."

Perhaps, however, the most interesting portion of the circular is that referring to the gold holdings of the State banks and the world's production last year, and this portion of it we produce verbatim, though the circular in its entirety should, if possible, be obtained from Messrs. Montagu, as it has a great deal of information likely to be useful to bankers:

HOLDINGS OF STATE BANKS.

One important fact emerges from the financial position created by the war. The holdings of gold by the State banks of combatant nations on the Continent have practically ceased for the time being to exercise their customary function as reserves against the issue of notes.

The large increase of the gold holding of the German Reichsbank during the last two years thus acquires grave significance, now that its gold reserves may be destined to become the sinews of war.

A considerable portion of the gold added to the Reichsbank gold reserves since the commencement of the war consisted of the contents of the war chest held at Spandau. The control exercised by the Government over the use of gold is shown by the order issued by the Bundesrath prohibiting the export of gold under a penalty of one year's imprisonment and a fine of £250. This accumulation of gold is not being released for ordinary foreign banking purposes, but is being held presumably for war finance alone. As a consequence, Holland for many weeks past has refused to accept German currency except at the heavy discount of between 7 and 8 per cent.

In contrast to this, M. Ribot, the French minister of finance, in his statement before the budget committee on December 18, used these words with regard to the Bank of France: "Never had its notes enjoyed greater credit, both in France and abroad. They were everywhere at a premium, while the notes of the enemy countries had considerably depreciated."

GOLD EXPORTS FROM UNITED STATES OF AMERICA.

A great feature during the year has been the extremely large exports of gold from the United States of America. At the beginning of August about £17,000,000 had been arranged for shipment thence to Europe. Over £2,000,000 of this amount was on the way to this country on board the *Kronprinzessin Cecilie*, a German liner, which returned to New York in order to avoid risk of capture. Very substantial amounts have been transferred from New York to Ottawa since hostilities began, and are there deposited on account of the Bank of England.

WORLD'S PRODUCTION IN 1914.

There is no reason to anticipate otherwise than a further reduction in the world's output, owing chiefly to a substantial decrease in the production of the Transvaal. Assuming the United States Mint figures for 1913 to be correct, there is a possibility of the total production for 1914 falling off to about £92,000,000.

OUTPUT AND BANK RESERVES.

The fact that the country of origin is by no means the ultimate home of gold is strikingly shown by placing the total gold output of the chief gold-producing countries against the total gold reserves held by the State institutions of those countries. The year 1912 is selected because it is the last year for which production figures are obtainable.

Country.	Production, 1912.	Holding, end 1912.
British Empire	£59,900,000	£29,300,000
United States	19,200,000	258,000,000
Russia	4,600,000	155,800,000
France	350,000	128,300,000
Germany	16,000	38,500,000
Austria	420,000	50,400,000
Italy	2,000	46,000,000

It will be observed that, though the British Empire produced more than three times as much gold as the United States of America, the Bank of England holding was less than one-eighth of that held by the United States Treasury, and that, as regards the other countries, the output of each compared with the holding of its respective State bank is minute except in the case of Russia.

One explanation is to be found in the extent to which paper currency is in vogue. The small note has never hitherto been utilized freely in England, and it remains to be seen whether the Treasury £1 and 10s. notes issued in August will attract permanently the public fancy.

In this connection it may be remarked that in normal times gold circulates in this country to the extent of about 32s. a head, compared with 16s. a head in the United States of America.

GOLD HELD BY BANKS IN THE UNITED KINGDOM.

In addition to the gold held against notes by the Bank of England, the following amounts were held by banks in the United Kingdom (including the Bank of England) in the last week day of June each year since 1907, when a return was first made: 1907, £33,296,802; 1908, £50,369,167; 1909, £49,221,074; 1910, £44,214,173; 1911, £54,009,977, 1912, £60,640,681; 1913, £69,524,127.

The Bank of England held gold earmarked for the Straits Settlements currency note reserve at the close of each year as follows: 1914, £602,685; 1913, £642,685; 1912, £480,000.

HOLDINGS OF NATIONAL BANKS.

The great State banks of Europe held gold as follows, as shown in the latest returns:

Country.	1914	1913	1912
Great Britain	£69,032,135	£33,874,535	£29,294,455
Austria-Hungary	51,578,000	51,666,000	50,380,000
Belgium	10,977,000	9,960,000	8,599,000
Denmark [1]	4,520,000	4,260,000	4,305,000
France	165,670,000	140,696,000	128,293,000
Germany	104,274,000	50,887,000	38,504,000
Holland	17,332,000	12,624,000	13,390,000
Italy [1]	49,628,000	48,585,000	46,019,000
Norway	2,246,000	2,657,000	2,353,000
Russia	176,796,000	168,355,000	155,841,000
Spain	22,870,000	19,168,000	17,485,000
Sweden	5,809,000	5,672,000	5,563,000
Switzerland	9,510,000	6,813,000	7,092,000

[1] It is possible that the figures set against these two banks include a small portion of silver.

INDIAN GOLD RESERVES.

Below are the holdings of the Indian Government toward the close of the last three years:

Location.	1914	1913	1912
Gold in India against note issues	£6,573,000	£15,000,000	£17,270,000
Gold in London against note issues	5,100,000	6,100,000	7,300,000
Gold in London on account of standard reserve	1,650,000	2,695,000	250,000
Gold in India on account of standard reserve	3,507,000	1,847,000	.....
Total	16,830,000	25,642,000	24,820,000

INDIAN IMPORTS.

The extraordinary capacity of India to attract gold attained its maximum in 1912, when no less than £27,800,000 was imported. In 1913 the total fell to £18,500,000 and this year to £8,150,000, approximately.

The reduction in the total of 1913 related only to the portion imported in the form of sovereigns, for the shipments of bar gold from England during that year were well maintained, as will be seen from comparing the following totals: 1912, £8,104,000; 1913, £9,917,000; 1914, £5,637,000.

No doubt the total would have been equally substantial in 1914 had not the war intervened.

It may be recalled that the reserves of gold held in India on account of the note issues rose from £8,400,000 at the beginning of 1912 to £17,300,000 at the close of 1912, showing that £8,900,000 of the sovereigns imported in that year had displaced an equivalent value of silver rupees held in the currency reserves.

BAR GOLD.

Imports:		Exports:	
Transvaal	£21,950,000	France	£6,500,000
South Africa, Rhodesia	2,150,000	British India	5,650,000
British India and Straits Settlements	1,900,000	Germany	5,550,000
West Africa	1,700,000	Spain and colonies	700,000
American States, excluding United States of America	1,250,000	Holland and colonies	600,000
Holland and colonies	800,000	Belgium	300,000
United States of America	500,000	South America	300,000
Australia and New Zealand	450,000	Switzerland	150,000
Egypt	200,000	Portugal and colonies	100,000
Other countries	300,000	Other countries	400,000
Total	31,200,000	Total	20,250,000

SOVEREIGNS.

The coinage of gold in the Empire during 1913 showed a considerable decrease. This reduction is largely accounted for by a lessened demand for India during 1913. The royal mint reported the issue of gold coin as detailed below:

Year.	England.	Australia.	Canada.	Total.
1912	£33,350,249	£9,113,401	£515	£42,464,165
1913	27,638,789	9,207,467	3,742	36,849,998

The following were the movements of sovereigns during the year:

Imports:		Exports:	
Argentina, Uruguay, and Paraguay	£3,750,000	France	£4,900,000
Brazil	3,750,000	Egypt	1,100,000
Egypt	3,100,000	Argentina, Uruguay, and Paraguay	1,100,000
Australia	350,000	British India	800,000
France	300,000	Holland and colonies	500,000
Holland	200,000	South Africa	400,000
United States of America	150,000	Gibraltar	350,000
Germany	150,000	Straits Settlements	200,000
Sundry other American States	150,000	Belgium	200,000
Portugal and colonies	100,000	Malta	150,000
Other countries	250,000	Other countries	300,000
Total	12,250,000	Total	10,000,000

FOREIGN GOLD COIN.

Imports have been on an unusually large scale this year, principally in the form of United States gold coin, which was sent into the Bank of England:

Imports:		Exports:	
United States of America	£6,450,000	France	£300,000
Brazil	600,000	Other countries	50,000
Argentina, Uruguay, and Paraguay	150,000		
Other countries	50,000		
Total	7,250,000	Total	350,000

THE GOLD PRODUCTION OF THE WORLD, 1913.

[From L'Economiste Européen, Mar. 6, 1914.]

From the statistics published by the Commercial and Financial Chronicle, the production of gold in the world in 1913 is estimated at 22,004,746 ounces, representing a value of $454,877,708, against 22,565,697 ounces, valuing $466,473,575, in 1912.

Apportionment of the production of gold in the world in 1912 and 1913:

Country.	1912	1913
	Ounces.	*Ounces.*
Africa	10,294,654	10,040,418
United States	4,520,719	4,271,562
Australia	2,606,878	2,532,582
Russia	1,073,875	1,209,377
Mexico	1,185,187	980,000
Canada	611,885	645,807
Various countries	2,272,499	2,325,000
Total	22,565,697	22,004,746

The defection in the gold production which will be observed for Africa is due to the strikes which had broken out in the South African region during the second six months of the current year.

In the United States the production has tended to decrease for several years after having reached the maximum with 4,821,709 ounces in 1909. The figures of 1913 are the least that have been obtained since 1905.

The Australian production has diminished almost continuously since 1903; it then amounted to 4,317,923 ounces.

The gold output of the Russian Empire is very nearly maintained, with the exception of the three years, 1909, 1911, and more especially 1910, which was particularly good.

A new improvement is shown in the Canadian gold production, after the gradual decrease which it has shown since 1900, when the quantity of gold produced was 1,350,475 ounces. It has since fallen successively until it reached 405,553 in 1907. It remained less than 500,000 ounces up to 1911 and reached 611,885 ounces in 1912. It amounts to 645,807 ounces in 1913.

In Mexico the gold industry has suffered from the conditions of trouble and anarchy which again afflicted that country. So it seems that this must explain the steady decrease of the production during the last years.

PART I.

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1913.

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., January 10, 1914.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I am submitting herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1913, being the forty-first annual report of the Director of the Mint. I am also submitting for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1912.

MINT SERVICE.

OPERATIONS OF THE MINTS.

The three coinage mints at Philadelphia, Denver, and San Francisco were in operation during the fiscal year, and nine assay offices, located at New York, Charlotte, New Orleans, Deadwood, Helena, Seattle, Boise, Salt Lake City, and Carson.

The original deposits of gold at all of the offices of the Mint Service during the year amounted to $161,131,878.30. The total coinage of the year amounted to $37,496,529.70, of which $30,058,227.50 was gold, $3,448,199.75 was silver, $2,861,768.55 was nickel, and $1,128,333.90 was bronze.

The purchases of silver during the year amounted to 1,779,992 99 ounces, costing $1,086,347.87, at an average cost of 61 cents per ounce. The seigniorage on subsidiary silver coins during the year amounted to $1,618,475.17, and the seigniorage on the minor coin amounted to $3,548,520.03, all of which was duly accounted for and turned into the Treasury.

The mint at Philadelphia during the year also coined 803,348 pieces of silver for the Government of Costa Rica, and the mint at San Francisco coined 2,638,820 pieces of silver and 5,001,000 bronze pieces for the Philippine Islands government.

PHILADELPHIA MINT.

The Philadelphia Mint has been in operation throughout the year, excepting the period required for the annual settlement. A new minor coinage plant has been put into partial operation during the year. Heretofore the minor coin ingots have been made of approxi-

mately the same size as the ingots of gold and silver and rolled in the same mills. The new ingots are 23 inches long, 4⅛ inches wide, and three-fourths of an inch thick, and will be rolled in 16-inch mills installed for this purpose. The capacity of the mint for minor coins is greatly increased. Particulars are given elsewhere in this report.

Continuous experiments with oil-burning furnaces have been under way at this mint for the last two years, but the results have not been entirely satisfactory. The increase in the price of gasoline during the year has been so great that after a calculation of costs it was found advantageous to go back to the use of illuminating gas for melting purposes.

SAN FRANCISCO MINT.

A change of superintendents has occurred at this mint since the close of the fiscal year, Thaddeus W. H. Shanahan succeeding Mr. Frank A. Leach. The latter originally served between August, 1897, and November, 1907, becoming Director of the Mint at the latter date. Having resigned the latter position in 1909, he was reappointed in August, 1912, as superintendent of the mint, to fill the vacancy caused by the death of Edward Sweeney.

A complete settlement of the accounts and count of funds was had, which was completed November 12, 1913. In making the count, vaults believed to contain in the aggregate $61,395,000 in silver dollars, which had not been disturbed for more than 30 years, were opened, the bags emptied, and the contents examined and weighed. Five bags were found to have been tampered with, 18 coins in all having been abstracted and iron washers substituted therefor. This pilfering was undoubtedly done at the time the coins were originally sacked, as the vaults have been continuously under seal. The original sacking was done in 1880, 1881, and 1882. Aside from these discrepancies, all bullion and moneys were accounted for and duly delivered to the incoming superintendent.

DENVER MINT.

A change in superintendents at this institution has been made since the close of the fiscal year, Thomas Annear succeeding Frank M. Downer, who had held the position since September 3, 1902. Under his administration, in 1906, the institution was reorganized from simply an assay office to a coinage mint. Upon settlement everything was found in order, and the bullion and coin charged to the institution, amounting to $499,695,091.90, was turned over to the incoming superintendent.

In the detailed report upon the operations of this mint will be found an account of successful experiments in the refinery by which an important economy has been developed in the electrolytic process. At the close of the fiscal year B. P. Wirth, who has been in charge of this refinery almost from the opening of the mint, was transferred and promoted to the position of superintendent of the melting and refining department of the New York assay office.

ASSAY OFFICE AT CHARLOTTE CLOSED.

The United States assay office at Charlotte, N. C., was closed finally on June 30, 1913, Congress having failed to make provision for its support beyond that date. Such pieces of equipment as were

valuable for further use were shipped to other institutions of the service and the remainder of the furniture and outfit was sold at auction on the premises and the proceeds turned into the Treasury.

In recent years the receipts of bullion at the Charlotte office have been insufficient to warrant its continuance, amounting in the last fiscal year to only $29,428.30.

The Charlotte assay office was originally established as a coinage mint in an act approved March 3, 1835, which also established branch mints at New Orleans, La., and Dahlonega, Ga. The mints at Charlotte and Dahlonega were designed to serve the gold-producing districts of the southern Appalachian region, which at that time comprised the only gold-mining territory in the United States. New Orleans was an important commercial port, and the mint there was expected to operate upon foreign coin and bullion.

From 1804 to 1823 small deposits of native gold aggregating in three years $47,000 had been received at the Philadelphia Mint from North Carolina. The receipts from this State gradually increased, and in 1829 they amounted to $134,000, and there was also $2,500 from Virginia and $3,500 from South Carolina. In 1830 Georgia entered the list of gold-producing States with an output of $212,000, and the yield of the four States aggregated $466,000. In 1831 Alabama and Tennessee each made a small showing and in 1834 the southern Appalachian region made its best output, approximately $900,000. In the following year the act providing for the three new branch mints was passed.

In November, 1835, Levi Woodbury, Secretary of the Treasury, was notified by Samuel McComb, who had been appointed to select a site for the Charlotte branch, that he had purchased from William Carson and F. L. Smith a full square containing near 4 acres of land for $1,500.

Proposals for the erection of the building were advertised for in the Charlotte Journal, Washington Globe, Richmond Inquirer, and the North Carolina Standard. The contract was awarded to Perry & Ligon, of Raleigh, N. C., on October 15, 1835, at $29,800, to be completed January 1, 1837. The cost of the machinery, to be furnished by the Director of the Mint at Philadelphia, was estimated at $15,000. Coleman, Sellers & Sons, Philadelphia, furnished the steam engine, shaft, etc., for $8,297, while Merrick, Agnew & Tyler furnished coining presses, draw benches, etc., for $6,690. This equipment was shipped to Charlotte in April, 1837. Considerable difficulty occurred in transporting the heavy machinery to Charlotte, and the steam engine was not set up until the middle of August.

John H. Wheeler, of North Carolina, was appointed as the first superintendent. J. H. Gibbon and John R. Bolton, of Pennsylvania, were appointed assayer and coiner, respectively. In December, 1837, the Secretary of the Treasury was advised that the deposits of gold had amounted to $130,600 and the coinage to $84,165. The dies for this coinage were made at the Philadelphia Mint, and in transmitting them the Director of the Mint urged Col. Wheeler, the superintendent, to hasten the coinage, and mentioned that although the dies are dated 1838, there was no objection to using them in 1837. The reason given for haste was that the equipment might be tested and particularly the operation of the coinage press by steam power, which was regarded as in some degree experimental. The application of

steam power to coinage was first made in this country at the Philadelphia Mint in 1836.

On the night of July 27, 1844, it was nearly destroyed by fire, which occurred in the coining room, and nearly consumed the entire building. The machinery was seriously injured but the records being stored in the vault, were not injured. Mr. Caldwell, the superintendent, reported that evidently the fire was the work of a thief, as his living apartments had been entered and articles stolen.

The present building was authorized by act of March 3, 1845, and was completed at a cost of $31,572.97, and occupied in 1846, and used for coinage purposes until May 20, 1861, when North Carolina entered the Confederacy and operations were suspended. The building was used during the Civil War as a Confederate hospital.

The coinage made at Charlotte was as follows:

Calendar year.	Gold.			Total value.
	Half eagles.	Quarter eagles.	Dollars.	
1838	$64,565	$19,770.00	.....	$84,335.00
1839	117,335	45,432.50	.....	162,767.50
1840	95,140	32,095.00	.....	127,235.00
1841	107,555	25,742.50	.....	133,297.50
1842	137,400	16,842.50	.....	154,242.50
1843	221,765	65,240.00	.....	287,005.00
1844	118,155	29,055.00	.....	147,210.00
1845 [1]	.....	.....	.....	.....
1846	64,975	12,020.00	.....	76,995.00
1847	420,755	58,065.00	.....	478,820.00
1848	322,360	41,970.00	.....	364,330.00
1849	324,115	25,550.00	$11,634	361,299.00
1850	317,955	22,870.00	6,966	347,791.00
1851	245,880	37,307.50	41,267	324,454.50
1852	362,870	24,430.00	9,434	396,734.00
1853	327,855	.....	11,515	339,370.00
1854	196,455	18,237.50	4	214,696.50
1855	198,940	9,192.50	9,803	217,935.50
1856	142,285	19,782.50	.....	162,067.50
1857	156,800	.....	13,280	170,080.00
1858	194,280	22,640.00	.....	216,920.00
1859	159,235	.....	5,235	164,470.00
1860	74,065	18,672.50	.....	92,737.50
1861 [2]	34,395	.....	.....	34,395.00
Total	4,405,135	544,915.00	109,138	5,059,188.00

[1] Mint burned July 27, 1844.

[2] Operations suspended May 20, 1861.

In 1867 the assay office at Charlotte was reestablished by act of Congress dated March 19, and was maintained as such until the close of the fiscal year 1913.

The mint at Dahlonega was never reopened after the Civil War. Coinage operations were resumed at New Orleans after the war, but were suspended and the coining machinery removed in 1910.

ASSAY OFFICE AT NEW YORK.

The New York assay office has handled more bullion and made more assays during the past year than ever before, and the work has been done under many difficulties, the chief of which have been due to insufficient appropriations. The receipts of the office are steadily increasing and the amount of jewelers' gold and silver bars issued is constantly increasing, all making more work. The closing of the refinery in the Philadelphia Mint and opening of the new electrolytic

refinery in the New York office has greatly increased the expenses. The earnings of the office from charges on bullion for treatment and for the manufacture of bars have correspondingly increased, but these earnings go directly into the Treasury and are not available for the payment of expenses.

These earnings for the last three fiscal years were as follows:

Fiscal year.	Amount.
1910–11	$95,940.62
1911–12	110,256.16
1912–13	166,641.53

The total expenditures of this office for the fiscal year 1913 were $191,773.47, so that it does not fall far short of reimbursing the Treasury for all expenditures in its behalf. As the larger part of the receipts consists of refined gold, which under the law is almost free from charges, the proportion of earnings to expenditures is very high.

It is earnestly represented that the increased estimates submitted for this office should be allowed in full.

The office is still crowded into the rear building intended to accommodate only the melting and refining departments. The rooms are inadequate for the entire office force and are unsuitable for transactions with the public. It is very much hoped that the new building planned for the Wall Street front may be pushed forward for early occupancy.

WESTERN ASSAY OFFICES.

The appropriations for the fiscal year 1914 for the assay offices at Deadwood, Helena, Salt Lake City, Boise and Carson were finally agreed to in conference between the two houses of Congress on the morning of March 4, 1913, after a protracted struggle between the House of Representatives, favoring the abolition of these offices, and the Senate, desiring to retain them. By the agreement the appropriations were cut below the cost of maintaining the offices on an efficient basis, and the appropriation for the transportation of bullion from the assay offices to the mints was cut far below the amount required for this purpose if all of these offices are to be kept open on the usual terms. The department has had no alternative but to cease receiving bullion at these offices, except upon the condition that the bullion would be transported to the mints at the expense of the depositors. This condition has been complied with to some extent, but the deposits at all of the minor offices have fallen off in consequence.

If these offices are to be maintained at all, the appropriations should be sufficient for the employment of competent assayers and helpers to safely and promptly care for the bullion. The assayers are authorized to buy all of the gold bullion offered and to draw checks on the Treasury of the United States in payment therefor. This is an important responsibility and should only be trusted with men of technical ability and substantial character. The estimates submitted for the fiscal year 1914 are made upon the lowest possible basis consistent with the proper administration of these offices.

EMPLOYEES AND EXPENDITURES OF THE MINT SERVICE, 1893–1913.

The number of employees in the entire mint service on the 1st day of July, 1913, was less by 25 than on the 1st day of July, 1912. In this connection it will be interesting to note that the number of employees in the service is now considerably less than it was 20 years ago, although more offices are maintained and the volume of business is much larger. The number of persons on the pay rolls at each institution in 1893, 1912, and in 1913 are given below:

Institution.	July 1, 1893.	July 1, 1912.	July 1, 1913.
Philadelphia	387	333	329
San Francisco	174	124	115
Denver	16	93	93
New Orleans	107	14	14
Carson	31	8	5
New York	67	89	92
Helena	13	8	6
Boise	10	10	5
St. Louis	3	.....	.....
Charlotte	3	3	.....
Deadwood	.....	5	5
Seattle	.....	19	19
Salt Lake	.....	6	4
Bureau	18	14	14
Total	829	726	701

The amount of business handled in each of the two years 1893 and 1913 is shown by the following figures:

Item.	1893	1913
Gold deposits	$46,449,841	$161,131,878
Operating expenditures	$1,344,005	$1,175,750
Income from charges, by-products, etc	$196,257	$482,317
Net operating expenditures	$1,176,620	$693,433
Gold bars made for the arts	$12,996,491	$38,011,583
Gold bars made for certificate reserve	.....	$101,677,121
Coinage:		
Value	$43,685,179	$37,539,375
Pieces	97,280,875	195,070,039
Bullion treated in refineries: Fine ounces	5,419,134	11,501,736

The only falling off shown by operations in 1913 from 1893 was in the value of the gold coinage, which was due to the law of 1911, allowing gold bars to be carried in the certificate reserve. The number of pieces coined in 1913 was twice as many as in 1893, owing to the increased demand for the small coins. It should be added that in 1893 the one and five cent blanks were purchased of outside manufacturers, while in 1913 all coins were made in the mints complete from the ingots. It should also be said that the wage scale averaged higher in 1913 than in 1893.

These results were due for the most part to the introduction of improved equipment, much of it automatic machinery, and practically all of it developed within the mint service and built by the mint mechanics.

GOLD CERTIFICATE BARS.

At the close of the fiscal year refined gold bars, duly stamped with their weight, fineness, and value, in accordance with the provisions of the act of Congress approved March 2, 1911, providing for the issue of gold certificates against gold bullion and foreign gold coin, were held at the several mints and the assay office at New York as follows:

San Francisco Mint	$44,887,579.12
Denver Mint	16,085,408.79
New York assay office	44,887,558.45
Total	105,860,546.36

ESTIMATES FOR THE FISCAL YEAR 1915.

The total of estimates for the mint service for the fiscal year 1915, including the bureau office in Washington, is $1,217,830, which compares with estimates of $1,222,270 for the fiscal year 1914 and appropriations for the latter year of $1,154,130.

As already stated above, the appropriations for the support of several of the assay offices during the current year are too small to allow of their being conducted in a proper manner. Either the appropriations should be increased or the offices should be abolished.

In making comparison between appropriations since the fiscal year 1912 with appropriations for prior years it should be understood that in former years the earnings from charges upon bullion were directly available for use in payment of expenses, thus supplementing the annual appropriations, while since 1912 all charges upon bullion have been paid into the general fund of the Treasury as a miscellaneous receipt. The charges during the fiscal year 1913, thus applicable under former practice to current expenses, amounted to $356,079.24.

APPROPRIATIONS FOR 1913.

The amounts appropriated for conducting the mint service during the fiscal year 1913 totaled $1,230,002.08, to which should be added the reimbursements for work done for the Philippine and Costa Rican Governments and for United States Government institutions, amounting to $44,277.11; also unexpended balances of permanent appropriations amounting to $13,353.35; this gives the total amount available for use during the fiscal year 1913, $1,287,632.54.

The expenditures from above funds (including the reimbursements noted) total $1,171,964.39, to which a few minor unsettled bills may be added.

The unexpended balance totals $120,372.10, from which should be deducted deficiencies totaling $4,703.95, giving net unexpended balances of $115,668.15. Of the unexpended balances $12,700.13 (permanent appropriation balances) continues to be available until used, and the remainder, $107,671.97, reverts to the surplus fund of the Treasury.

The deficiencies occurred at the New York assay office and the Denver Mint and were occasioned, principally, by losses of precious metals in refinery operations. In prior years such losses were paid from the earnings; but, beginning with the fiscal year 1913, are now payable from our annual appropriations.

Details, by institutions, are shown in the following tabulated statement:

Appropriations, reimbursements, expenditures, and balances, all offices, fiscal year 1913.

Items.	Appropriations.						
	Salaries.	Wages of workmen.	Contingent expenses.	Equipment, New York assay office.	Freight on bullion and coin.	New machinery and appliances.	Totals.

PARTING AND REFINING FUND.

The balance in the parting and refining fund, which, prior to the fiscal year 1913, formed a permanent indefinite appropriation for the expense of parting and refining bullion, was on June 30, 1913, $694,804.11. Against this there is a known encumbrance of $3,000. The remainder, $691,804.11, is to be covered into the Treasury as a miscellaneous receipt on June 30, 1914.

The expenses of parting and refining bullion are now paid from our regular annual appropriations.

CONSOLIDATED INCOME AND EXPENDITURES.

A complete statement of the income and expenditures of the Treasury on account of the mint service, including seigniorage on the silver and minor coins, is shown in the statement following.

Consolidated statement of income and expenditures of the entire mint service for the fiscal year 1913.

EXPENDITURES.			
Compensation of employees:			
Mints and Assay Offices—			
Salaries appropriation	$273,494.78		
Wages appropriation	626,541.04		
		$900,035.82	
Bureau of the Mint, salaries appropriation		24,695.28	
			$924,731.10
Equipment, stores, and other expenses:			
Mints and Assay Offices—			
Contingent appropriation (including $17,744.86 operating waste of precious metals and $7,032.61 loss on assay value of precious metals contained in operative sweeps sold)	219,175.52		
Equipment of New York assay office, appropriation	653.22		
Freight on bullion and coin shipments between mints and assay offices, appropriation	23,696.23		
		243,524.97	
Bureau of the Mint, contingent appropriation		3,708.32	
			247,233.29
			1,171,964.39

LOSSES.			
Net expenditures, from earnings and expenditures statement, above			$806,521.40
Loss on face value of minor coins recoined		$6,330.88	
Less seigniorage on recoinage of minor coin		1,263.16	
			5,067.72
Net revenues from mint service			4,480,307.86
			5,291,896.98

EARNINGS.				
Deductions on bullion deposits:				
Parting and refining charges			$199,406.64	
Melting charges			39,775.84	
Assaying and stamping charges			24,219.45	
Alloy charges			15,291.34	
Fine-bar charges			36,005.14	
				$314,698.41
Special assays of bullion and ores				3,496.40
Proceeds of sale of medals and proof coins				2,971.07
Reimbursements to appropriations:	Contingent.	Wages.	Totals.	
For manufacture of machinery and appliances for Government institutions	$2,053.89	$2,504.32	$4,558.21	
For manufacture of medals	8,141.26	1,484.31	9,625.57	
For manufacture of Philippine coinage	9,106.09	18,212.20	27,318.29	
For manufacture of Costa Rican coinage	428.49	2,346.55	2,775.04

Total earnings				365,442.99
Net expenditures, to profit and loss statement, below				806,521.40
				1,171,964.39

PROFITS.				
Seigniorage:				
On subsidiary (silver) coinage			$1,618,475.17	
On minor (nickel and bronze) coinage	$3,583,256.87			
Less—				
Operating waste	$1,819.82			
Cost of distribution	24,692.95			
		26,512.77		
			3,556,744.10	
				$5,175,219.27
Surplus bullion recovered:				
From deposit melting room grains and sweeps			33,279.15	
From coining operations			203.27	
From melting and refining operations			11,156.59	
From gain on shipment (difference in assays)	$739.27			
Less losses on shipments	215.97			
			523.30	
				45,162.31
Gain on light weight gold coin purchased for recoinage				66.71
Proceeds of sale of byproducts (platinum, etc.)				69,735.03
Proceeds of sale of old materials				1,713.66
				5,291,896.98

DEPOSITS OF GOLD BULLION.

The value of all gold bullion contained in original deposits at the mints and assay offices during the fiscal year 1913 was $161,131,878. The redeposits during the year, consisting of bullion transferred from one office to another, and bars bearing the stamp of one of the mints or assay offices, amounted to $27,937,471. The value of the gold bullion and uncurrent domestic and foreign coin received, including redeposits, amounted to $189,069,349, which was the total of gold receipts at all offices.

Statements which show the classification of deposits, the source of domestic bullion by States and Territories, and the receipts at the several offices of the service appear in tabular form in this volume elsewhere.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 1,547,317 fine ounces, of the value of $31,985,879, and foreign gold coin containing 132,172 fine ounces, of the value of $2,732,228, were deposited, and consisted of bullion and coin produced in the following-named countries:

Country.	Crude bullion.		Refined bullion.		Coin.	
	Fine ounces.	Coining value.	Fine ounces.	Coining value.	Fine ounces.	Coining value.

DEPOSITS AND PURCHASES OF SILVER.

The deposits of silver at the mints and assay offices during the fiscal year ended June 30, 1913, for return to depositors in fine or unparted bars, with the weight and fineness stamped thereon, aggregated 2,238,284.41 fine ounces. The United States assay office at New York received the greater part of these deposits.

The Government of the Philippine Islands deposited at the United States mint at San Francisco silver coins issued under the act of March 2, 1903, containing 342,054 fine ounces, for recoinage into coins of reduced weight and fineness as authorized by the act of June 23, 1906.

The purchases and deposits of silver bullion at the mints and assay offices of the United States during the fiscal year 1913 were as follows:

Items.	Fine ounces.	Cost.
Commercial bars purchased	1,287,791.07	$787,041.00
Unrefined deposits, partings, charges, and fractions	488,652.62	297,166.13
Mutilated and uncurrent coins	1,764.56	1,072.28
Assay coins and surplus bullion	1,784.74	1,068.46
For return of fine bars	2,238,284.41	1,358,845.79
Philippine coins transferred for recoinage	342,053.53	335,381.41
Total	4,360,330.93	2,780,575.07

DEPOSITS OF FOREIGN SILVER BULLION AND COIN.

Foreign silver bullion containing 624,215 fine ounces and foreign silver coin containing 17,010 fine ounces were received from various countries as follows:

Country of origin.	Crude bullion.	Refined bullion.	Coin.
	Fine ozs.	*Fine ozs.*	*Fine ozs.*
British Columbia	13,090	.....	.....
Northwest Territory	129	.....	.....

Total silver	2,200,000	1,100,000.00	12,336,705	3,448,199.75
Minor:				
5-cent nickels	10,656,000	532,800.00	57,235,371	2,861,768.55
1-cent bronze	10,981,000	109,810.00	112,833,390	1,128,333.90
Total minor	21,637,000	642,610.00	170,068,761	3,990,102.45
Total coinage	24,123,000	7,462,610.00	186,626,871	37,496,529.70

The approximate amount of copper used in the above coinages was 619.142 tons, of which 5.539 tons were used in alloying gold and 9.502 tons in alloying silver, while 604.101 tons were used in minor coinage.

In addition to the regular coinage there were manufactured at the mint at Philadelphia silver coins for the Government of Costa Rica, as follows:

Denomination.	Pieces.	Value.	Value in United States subsidiary coin.	Silver consumed in coinage.
		Colons.		*Fine ozs.*
Silver:				
10 centavos	267,783	26,778.30	$21,422.63	15,496.59
5 centavos	535,565	26,778.25	21,422.62	15,496.59
Total	803,348	53,556.55	42,845.25	30,993.18

For the government of the Philippine Islands the mint at San Francisco manufactured silver and bronze coins as follows:

Denomination.	Pieces.	Value.	Value in United States subsidiary coin.	Metal consumed in coinage.
		Pesos.		*Fine ozs.*
Silver:				
Pesos	385,000	385,000.00	$270,167.23	195,432.22
20 centavos	743,565	148,713.00	99,158.50	71,728.78
10 centavos	1,510,255	151,025.50	104,460.05	75,563.79
Total silver	2,638,820	684,738.50	473,785.78	342,724.79
Bronze: 1 centavo	5,001,000	50,010.00	[1] 25,005.00	[2] 833,500.00
Total coinage	7,639,820	734,748.50	[1]498,790.78	.....

[1] Value in United States minor coin.

[2] Troy ounces.

PURCHASE OF MINOR COINAGE METAL.

There were purchased during the year 14,834,078.26 ounces, avoirdupois, of minor coinage metals, at a cost of $202,493.32, which was delivered at the coinage mints as follows:

Metal.	Philadelphia.		San Francisco.	
	Ounces.	Cost.	Ounces.	Cost.
Copper	8,753,901.62	$102,573.44	583,333.33	$7,160.00
Tin			17,995.83	632.42
Zinc	298,827.09	1,548.92	15,472.91	68.96
Nickel	1,458,397.49	37,930.66	218,749.99	5,893.60
Total	10,511,126.20	142,053.02	835,552.06	13,754.98

Metal.	Denver.		Total.	
	Ounces.	Cost.	Ounces.	Cost.
Copper	2,916,754.16	$32,750.91	12,253,989.11	$142,484.35
Tin	45,135.42	1,566.38	63,131.25	2,198.80
Zinc	88,010.42	512.99	402,310.42	2,130.87
Nickel	437,500.00	11,855.04	2,114,647.48	55,679.30
Total	3,487,400.00	46,685.32	14,834,078.26	202,493.32

Minor coinage metals were purchased, during the fiscal year, for Philippine coinage for delivery at San Francisco Mint:

Metal.	Ounces.	Cost.
Copper	874,708.33	$10,076.64
Tin	29,895.83	1,048.37
Zinc	30,245.83	134.60
Total	934,849.99	11,259.61

PURCHASE OF MINOR COINAGE BLANKS.

There were purchased during the year 499.40 pounds of prepared nickel blanks at a cost of $149.82; and 1,368.79 pounds of prepared bronze blanks at a cost of $273.76, for delivery at the Philadelphia Mint.

DISTRIBUTION OF MINOR COINS.

The amount of minor coins distributed was $4,139,066.40, and the expenses for distribution, including cost of bags, twine, seals, and tags, were $24,992.95, as follows:

Denomination.	From Philadelphia.	From San Francisco.	From Denver.	Total.
5-cent nickels	$2,433,954.25	$77,152.90	$557,146.75	$3,068,253.90
1-cent bronze	878,427.42	53,967.24	138,417.84	1,070,812.50
Total distribution	3,312,381.67	131,120.14	695,564.59	4,139,066.40
Expenses of distribution:				
Transportation	8,739.56		11,390.79	20,130.35
Bags	3,370.20	254.70	754.70	4,379.60
Seals	465.00			465.00
Drayage			18.00	18.00
Total	12,574.76	254.70	12,163.49	24,992.95

Minor coinage issued, melted, and amount outstanding.

Denomination.	Coined.	Issued.	On hand.	Melted.	Outstanding, June 30, 1913.

The uncurrent minor coins melted at the mint at Denver are not necessarily of the former coinage of that particular mint.

PHILIPPINE COINAGE.

The following coinage was executed during the fiscal year 1913 at the United States mint at San Francisco for the Philippine Islands Government:

Denomination.	Pieces.	Consumed in coinage.
		Fine ounces.
Silver:		
Pesos	385,000	195,432.22
20 centavos	743,565	71,728.78
10 centavos	1,510,255	75,563.79
Total silver	2,638,820	342,724.79
		Troy ounces.
Bronze: 1 centavo	5,001,000	833,500.00
Total coinage	7,639,820	.....

The total silver coinage to June 30, 1913, from coins received from Philippine Islands for recoinage and from bullion purchased for such coinage was as follows:

Denomination.	Coined from new bullion, acts of Mar. 2, 1903, and June 23, 1906.		Coined from Philippine coin received for recoinage, act of June 23, 1906.		Total.	
	Pieces.	*Fine ounces.*	*Pieces.*	*Fine ounces.*	*Pieces.*	*Fine ounces.*
Pesos	93,445	48,068.11	42,915,059	22,124,705.00	43,008,504	22,172,773.11
50 centavos	3,342,126	805,870.13	2,136,000	534,382.25	5,478,126	1,340,252.38
20 centavos	3,666,152	353,600.36	4,014,324	411,240.02	7,680,476	764,840.38
10 centavos	6,077,392	293,082.21	5,565,255	289,171.75	11,642,647	582,253.96
Total	13,179,115	1,500,620.81	54,630,638	[1] 23,359,499.02	67,809,753	24,860,119.83

[1] Included in this amount is 12,542.29 fine ounces of coins reserved for assay.

WORK OF THE GOVERNMENT REFINERIES.

Bullion was operated upon by the refineries connected with the mints at San Francisco and Denver and the assay office at New York, during the fiscal year 1913, as follows:

Institution.	Sent to refinery.		Returned from refinery.	
	Gold.	Silver.	Gold.	Silver.
	Fine ozs.	*Fine ozs.*	*Fine ozs.*	*Fine ozs.*
San Francisco	858,064.252	246,614.33	858,338.613	249,741.00

MINT OF THE UNITED STATES AT PHILADELPHIA.

This mint was in operation throughout the year.

PROOF COINS AND MEDALS.

The following table shows the number of proof coins and medals and their nominal value manufactured during the fiscal year:

Articles.	Pieces.	Nominal value.
Gold medals	164	$7,375.20
Silver medals	574	1,384.70
Bronze medals	7,751	3,463.49
Gold proof coins	340	2,860.00
Silver proof coins	780	221.00
Minor proof coins	4,012	120.36
Total	13,621	15,424.75

THE STATE OF THE NUMISMATIC COLLECTION.

Although for the fiscal year just past the numismatic collection has not had the usual small appropriation for the purchase of historical coins and medals, yet the increase of the number of specimens in the collection has not fallen much short of the normal aggregate of accessions in late years. And if the cost and historical value of the coins acquired the past year be taken into consideration the cabinet has fared unusually well.

These favorable results in a year that opened so inauspiciously are directly due to the action of the officials of the Treasury Department in placing with the cashier of the mint a considerable number of gold coins which commanded a premium among collectors. The most of

these pieces were disposed of and the premium received used for the purchase of coins and medals. A few of the eagles are still in hand. Persons interested in the welfare of the cabinet of coins, and there are many who are interested in it, will feel grateful to the officials who made this continued growth possible by a wise use of a number of coins which eventually would have slowly dribbled into private possession at face value.

A cause of no little gratification has been the sale of the large catalogue of the collection published in 1912. Numismatic publications are of such narrow appeal that the sale of even the customary small editions is generally very slow. The ready exhaustion, therefore, of the first edition of this unpretentious catalogue followed by the sale of nearly all of the second edition is more than was expected.

There has been prepared during the past year a small guide book for the collection, a pamphlet of little more than a hundred pages. This guide is sold at 10 cents, prepared with a view of meeting the demands of visitors as their desires have been ascertained by the interest they manifested and the questions they asked. The guide can be mailed for 2 cents postage.

MACHINE SHOP.

In addition to the regular repairs and upkeep of the machinery and appliances, the following new work was done for this mint: 4 tumbling barrels of washing machine; 3 scrap cutters; metal work of 2 coin-reviewing machines; 5 sets of old-style nickel molds; 1 six-foot balance for transfer weigh room; 2 twenty-five horsepower rolling mills changed to fifty horsepower; 1 six-inch lever shear; 4 beds and punches for cutting 6 bronze planchets; 4 beds and punches for cutting 5 nickel planchets; 2 centrifugal coin-drying machines installed in minor coinage plant; 8 collars for dime coinage; 588 collars for nickel coinage; 103 collars for bronze coinage; 4 sectional collars for eagle coinage; and 2 sectional collars for double-eagle coinage. There are also 2 automatic weighing machines under construction in the shop, about 50 per cent of the work on which is completed.

During the same period the following work was done in the shops for the various mints and assay offices:

Mint of the United States at San Francisco, Cal.: Special screws for automatic weighing machine; 30 collars for nickel coinage; 10 collars for bronze coinage; 10 collars for dime coinage; 5 collars for half-eagle coinage; and 15 collars for Philippine coinage.

Mint of the United States at Denver, Colo.: 12 collars for bronze coinage; 30 collars for nickel coinage; 1 set of double-eagle dressing tools for milling machine; 25 center-knife edges and 50 end-knife edges for automatic weighing machines; 20 beams complete for automatic weighing machines; 25 basket traps for automatic weighing machines; 25 basket backs for automatic weighing machines; and 25 kickers for automatic weighing machines.

United States assay office at New York, N. Y.: 1 bullion-clipping machine; 1 pair of long couplings for vertical rolling mill; 8 silver disks for Smithsonian Institution; 30 silver disks for Geological Survey; and 22 silver disks for Bureau of Engraving and Printing.

There have been designed and built 4 rotary ball-bearing turntables and 44 ingot molds. The turntables are made up of 2 six-foot cast-iron disks. The bottom disk is the ball race, which carries 146 one-inch diameter hardened steel balls. The top disk has a cone which fits the bottom race. On the top disk are mounted 11 ingot molds equally spaced on a four-foot six-inch circle in an upright position. The molds will produce either a nickel or bronze ingot 24 inches long, 4¼ inches wide, three-quarters of an inch thick. The back half, or, in other words, the plain part of the mold, is bolted fast to the table, and the half that carries the ingot swings down to an angle of 45° on two trunnion bearings which are bolted to the table. The locking device for clamping the mold while the ingot is being poured is four links connected to the stationary part of the mold with a loose bolt. The other end of the link carries two eccentric pressure bars which clamp on three lugs equally spaced on the mold. The one end of each link carries an eccentric bushing which can be adjusted to take up any expansion or contraction. This principle eliminates all handling and lifting of the mold.

CARPENTER SHOP.

Besides the general repairs and upkeep of the machinery and appliances, the following work was done by the chief carpenter and his assistants during the year:

The tar or mastic applied to the roof to stop leaks would not adhere to the glazed tiles and formed regular water pockets. This was all removed, the roof painted and covered with painted muslin, and the joints filled up with plastic cement, which proved very satisfactory. The same method was applied as new leaks appeared.

Eleven ventilating monitors were built on the northwest terrace roof to give light and ventilation to the basement, in which the new minor-coinage plant is installed. Three of these monitors, which were crushed by falling stone when the building was struck by lightning, were rebuilt.

The room on the second floor formerly occupied by the electrician was fitted up as a telephone exchange. The partitions between this and the counting room were lined with beaver board to deaden the sound of the noise made by the counters, which proved very satisfactory. A new wardrobe for the operator was built.

The new minor-coinage plant was equipped with all necessary water and acid tubs, vats, and tanks, 20 extra large copper-lined strip cars, switchboards, etc.

Two new coin-reviewing machines were built and some very important improvements made on them. The same improvements were made on the six older machines.

One counting hopper and eleven counting boards, of the following denominations, were made for the subtreasury at St. Louis, Mo.: Two 1-cent boards, two 5-cent boards, two dime boards, two quarter-dollar boards, two half-dollar boards, and one 1-dollar board. All patterns for new machinery, etc., were made in this department.

SEWING ROOM.

The sewing room, besides making the necessary repairs to flags, awnings, window shades, rugs, machine belts, etc., manufactured for this mint 957 pairs asbestos mitts; 1,496 pairs fire mitts; 5,222 aprons, sleeves, and miscellaneous articles, and 122,450 coin bags received from contractor were marked.

There were also manufactured for the New York assay office 656 pairs canvas mitts, 194 pairs asbestos mitts, and 22,500 anode bags.

For the mint at San Francisco, 206 pairs fire mitts, 118 pairs asbestos mitts.

For the assay office at Deadwood, 4 pairs asbestos mitts.

For the assay office at Boise, 12 pairs asbestos mitts.

For the assay office at Helena, 12 pairs asbestos mitts.

ASSAYING DEPARTMENT.

The operations of this department during the fiscal year 1913 were as follows:

Item.	Samples operated on.		
	Gold.	Silver.	Gold and silver.
Deposits	3,859	664	.....
Ingots	660	325	.....
Fine melts	12	.....	.....
Bullion assay samples	.....	.....	225
Superintendent's grain bars	.....	.....	79
Assayer's bars	.....	.....	41
Melter's bars	.....	.....	45
Sweep samples	.....	.....	27
Silver-purchase bars	.....	.....	376
Total	4,531	989	793

The number of assays made was as follows:

Deposits and purchases	39,920
Ingots (gold and silver)	3,486
Special assays	2,724
Miscellaneous assays, bronze and nickel	529
Silver purchases	392
Oil tests	23
Total	47,074

The average cost per assay during the year was $0.469.

In addition to the above, 490 ounces of proof gold and 300 ounces of proof silver were made.

Of the 660 melts of gold ingots made in the melting and refining department, 90 were returned for remelting and 1 was condemned. Of the 325 melts of silver ingots, 1 was returned for remelting.

The fineness of the gold melts passed was:

11 melts at	900.2
30 melts at	900.1
116 melts at	900.0
174 melts at	899.9
171 melts at	899.8
64 melts at	899.7
3 melts at	899.6
569	

The fineness of the silver melts passed was:

7 melts at	899.75
43 melts at	899.5
47 melts at	899.25
109 melts at	899.
52 melts at	898.75
41 melts at	898.5
14 melts at	898.25
11 melts at	898
324	

MELTING AND REFINING DEPARTMENT.

During the fiscal year 660 gold-ingot melts were made, making a total charge to the melting pot of 2,066,745.994 fine ounces. There was 1 melt condemned. Out of this quantity of bullion melted, the loss found at settlement amounted to 26.421 fine ounces, or 1.27 per cent of legal allowance based on actual charge.

It has been the custom here for years past to make gold-ingot melts to the full capacity of the No. 70 crucible, which amounts to approximately 6,000 ounces gross of standard metal. We find, however, if our basis of coinage metal is not electrolytic gold but uncurrent coin, and fine gold lower in fineness than 998, that, owing to impurities, segregation troubles this department greatly on these large melts, and great difficulty is experienced in getting an ingot melt of uniform composition. In order not to reduce our melting capacity or increase labor, we decided to melt the same amount of metal per pot, but stir the charge twice, treating it as two melts. In other words, when full pot is ready for dipping, use plunger 100 strokes and dip half out of pot, giving this half a number; then again using plunger on second half 100 times and giving this second half of the melt a number. In this way a smaller volume is expected to be uniform and is more easily mixed, and results prove the benefit of this method in reducing the ounces remelted.

In silver there were 325 melts made, none condemned, making a total charge to melting pots of 1,013,263.95 fine ounces. Upon settlement of the accounts of this department a gain in silver of 355.46 ounces was found, which in no way removes the fact that a loss of 87 ounces in melting was suffered.

During the fiscal year this department received from the superintendent bullion containing 1,993,067.302 fine ounces in gold, the coinage value being $41,200,357.57. The silver contents of bullion received contained 1,818,499.04 fine ounces, of the coinage value of $2,513,909.14.

The melts made aggregate as follows:

Melts.	Bars.	Ingots.	Remelts.	Condemned.	Good ingots.
					Ounces.
Gold	23	640	86	1	1,935,752.905
Silver	34	280	1	.....	986,410.35
Bronze	.....	3,519	.....	.....	11,978,490.60
Cupro nickel	.....	4,123	.....	.....	12,127,186.30
Total	57	8,562	87	1	27,027,840.155

During a nine days' run, including overtime to 10 p. m., from March 20 to 29, inclusive, working three gangs of men, 10 sets of molds, 12 and 13 furnaces, 12 men to gang, the results in melting cupro nickel were as follows:

Date.	Number of—		Weight of ingots made.
	Melts.	Ingots.	
			Ounces.
Mar. 20	61	2,829	192,150.60
21	61	2,810	190,686.40
22	61	2,837	192,387.30
24	61	2,843	192,704.50
25	61	2,835	192,386.50
26	56	2,611	176,120.00
27	64	2,918	197,108.60
28	59	2,777	187,710.60
29	64	2,925	197,192.40
Total	548	25,385	1,718,446.90
Daily average	60.9	2,820.5	190,938.54

The total amount of ingots poured (25,385) in this time amounts to the large weight of 59 tons.

Sweeps cellar operations.

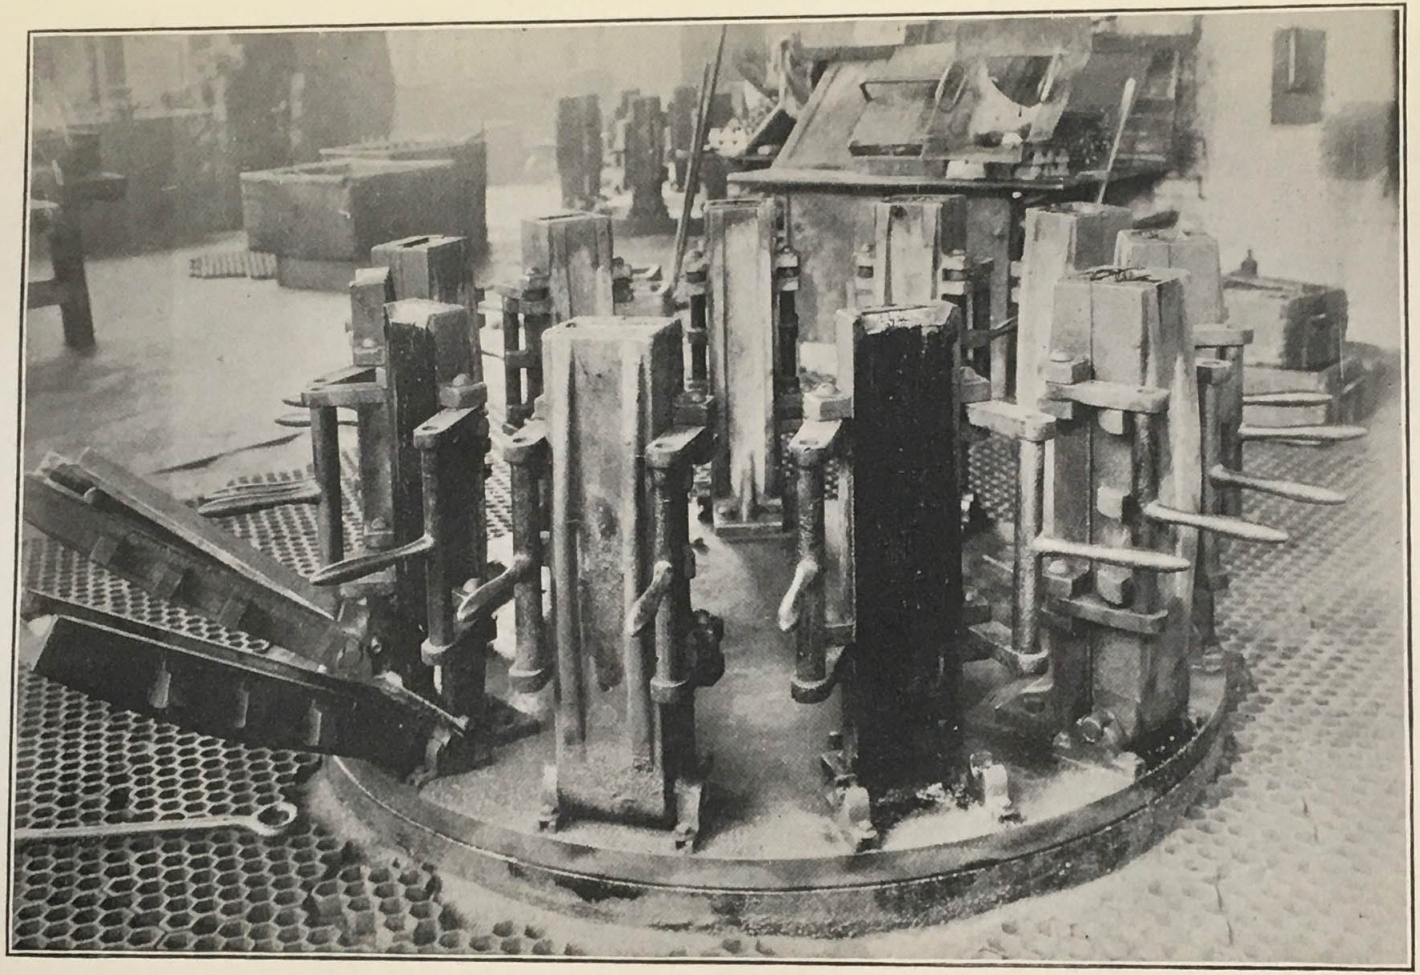
In treating the broken crucibles, burned out refractories, and drosses from the minor coinage melting operations, the larger material is put through the crusher, then it is fed, together with the smaller refuse, into the Ellspass mill and crushed in the wet way. The more or less large pellets remaining upon the pan of the mill are saved; the resulting fine material, or tailings, is thrown away.

The value of the metals saved by thus treating these waste materials was upward of $800. The cost to recover same in labor, power, and maintenance was not half this amount.

Since the refinery operations have been discontinued here and the bulk of the old equipment sent to New York, we have found it greatly to our advantage to separate the precious-metal operations from that of the minor coinage metals by using for gold and silver ingot purposes the furnaces left vacant by the closing of our refinery. These five furnaces are connected to a settling chamber, and this room being far removed from our regular melting room, and being of ample size, gives convenient facilities for handling this branch of ingot making without any risk of contaminating the precious metals.



INGOT CASTING SET.

Consists of ball-bearing turntable holding upright 11 molds. The mold proper forms the movable part, being self-supported on trunnions whether open or closed, and is clamped to vertical face by two swinging eccentric bars, with lever handles, bearing at six points.

The first installation of the new large molds on turntable for bronze-ingot making has been put in successful operation. This change enables us to cast a melt of 3,200 ounces into ingots (24 by $4\frac{1}{8}$ by $\frac{3}{4}$ inches) in four minutes. It is proposed that one turntable, holding 11 molds, will serve two furnaces, with two melters pouring together and three men manipulating molds and ingots, as follows: Two melters pour simultaneously, table then turned until next mold is in position for filling; first helper opens up mold and releases ingot, second helper picks up ingot, conveys it to pickling and cooling tanks, while third helper removes pellets and slivers and greases, closes, and clamps mold. As a heat can be taken off this way in 5 minutes, an actual saving of 10 minutes is effected on each melt, or 50 minutes in a day's work per furnace, which can be utilized toward getting more metal melted. These ingots in bronze weigh 23 pounds, or about six times what our small ingot weighs, making 10 to a heat, in place of 60 of the smaller ingots. The filing is slightly heavier than on the small ingots, but in linear measure is 40 feet, as against 120. The topping is done on heavy shears made in mint machine shop and placed in position on melting-room floor this fiscal year. This large shearing machine is a valuable acquisition, for it is no little trouble to top the large ingots and shear copper bars and zinc slabs to any size desired. Four such turntables are soon to be put in place on melting-room floor; these will serve the present coinage requirements for large ingots.

This department has been on the lookout for an oil-burning furnace for the past two years, and this fiscal year tested four different makes, with a view of recommending the equipment that together showed low fuel cost per 1,000 pounds of metal melted with practical and suitable furnace details for our special requirements. The results of our tests showed a wide variation in fuel consumption, running from $4.77 per 1,000 pounds of cupro nickel melted up to $10. This is based on oil at 9 cents per gallon, an extremely high price, but the cost to us at this time in 6-barrel lots.

The furnace showing lowest oil consumption per 1,000 pounds of metal melted was of the pit type, and upon our melting-room floor stood too high and rendered dipping extremely difficult. Not one of these furnaces fulfilled our requirements, and up to date no recommendation has been made. A modified furnace is still awaiting a test, which we hope to run as soon as a little let-up can be indulged in. In the meantime, due to poor and inconstant results with our present furnaces on account of high price and low quality gasoline, we made some tests using city gas as fuel. We found that our present furnaces with but little alteration could be adapted to this illuminating-gas fuel, and by using same show a saving over gasoline fuel and secure uniform melting periods for our different metals, which constancy and convenience appealed so strongly to us as to warrant a recommendation that city gas fuel be used. This recommendation being approved, we are now in the position of being promised a fuel entirely satisfactory, in so far as convenience, sufficient heat units, and suitability for our melting-room requirements are concerned. On the other hand, oil fuel is cheaper, though the life of furnace parts is shorter and punishment to melters much greater; how much cheaper, and if better, when everything is considered, we hope to determine next year.

Minor coinage metal operations.

During the year the melting and refining department received from the superintendent minor coin metal			Troy ounces. 27,700,946.72
Delivered prior to settlements:		Troy ounces.	
Cupro nickel		11,730,196.90	
Bronze		11,776,770.90	
		23,506,967.80	
Delivered at settlement June 14, 1913:	Troy ounces.

COINING DEPARTMENT.

From July 1, 1912, to August 23, 1912, when settlement was made with the coiner, whose office was abolished by act of Congress and in lieu thereof the office of superintendent of the coining department created, the coiner received from the superintendent and operated upon 322,233.810 standard ounces of gold, from which there was produced 205,593.750 standard ounces of coin, of the value of $3,825,000, or 486,000 pieces, which was delivered to the superintendent during this part of the fiscal year. Prior to this settlement there was returned to the superintendent 90,591.912 standard ounces of gold in clippings, condemned coin, and bars, and there was delivered in settlement 26,048.010 standard ounces in coin and blanks. The entire operation showed a loss of 5.444 standard ounces, of the value of $101.28, being 3.37 per cent of the legal allowance. The percentage of coin produced to the amount operated upon was 66.83.

During this same period, from July 1, 1912, to August 23, 1912, the coiner also received from the superintendent and operated upon 1,229,270.65 standard ounces of silver, from which there was produced 502,896.96 standard ounces of coin, of the value of $626,000 in subsidiary silver coin, or 3,450,000 pieces. Prior to the coiner's settlement of August 23, 1912, he returned to the superintendent 227,779.57 standard ounces of clippings, condemned coin, and bars, and delivered at settlement 498,576.76 standard ounces finished, unfinished, and condemned coin. Upon the entire operation there was a wastage of 17.41 standard ounces of the value of $9.40, being 1.41 per cent of the legal allowance. The percentage of coin produced to the amount operated upon was 76.02.

The coiner also received from the superintendent during the same period, from July 1, 1912, to August 23, 1912, 3,059,415.80 standard ounces of bronze ingots, of which 2,935,905.20 standard ounces were operated upon, from which there was produced 1,327,408.25 stand-

ard ounces of 1-cent pieces, of the face value of $132,700, or 13,327,000 pieces, upon which there was a wastage of 874.35 standard ounces of the value of $10.23, being 29.74 per cent of the legal allowance as allowed on silver. There was returned to the superintendent prior to the coiner's settlement August 23, 1912, 1,058,085.50 standard ounces in clippings, condemned coin, and blanks, and there was delivered in settlement 673,047.70 standard ounces in ingots, strips, and condemned coin. The percentage of coin produced to the amount of metal operated upon was 45.21.

In addition to the gold and silver received for coinage, the coiner received from the superintendent 294.422 standard ounces of fine gold for medals, of which 47.999 standard ounces were used in the manufacture of medals. This amount and 167.147 standard ounces in clippings were delivered to the superintendent prior to settlement, and 78.970 standard ounces were delivered at settlement. The coiner also received from the superintendent during the same period 873.27 standard ounces of fine silver. Of this amount 301.77 standard ounces were used in the manufacture of medals, which, with 305.04 standard ounces in clippings, were delivered to the superintendent prior to settlement and 266.41 standard ounces delivered at settlement. The slight loss in gold and silver is included in the wastage in the manufacture of gold and silver coin.

The gold, silver, and minor coinage for this period of the fiscal year, July 1, 1912, to August 23, 1912, amounted to $4,583,700, or 5,268,000 pieces. The net wastage in coining this amount was $120.91.

Receipts and deliveries by the coiner, July 1 to Aug. 23, 1912.

From August 24, 1912, to June 30, 1913, the coining department received from the superintendent 1,736,813.980 fine ounces of gold for coinage, which was operated upon and from which there was produced 766,899.881 fine ounces of coin, of the value of $15,853,227.50, or 2,583,405 pieces, and 964,351.001 fine ounces in clippings, condemned coin, blanks, and bars delivered to the superintendent dur-

ing this portion of the fiscal year prior to settlement, and there was delivered in settlement 5,553.256 fine ounces in condemned coin, blanks, bars, and sweeps. The entire operation showed a wastage of 8.845 fine ounces, of the value of $182.84. The percentage of coin to the amount of metal operated on was 44.15. The percentage of the legal allowance was 1.60.

During the same period the coining department also received from the superintendent for coinage 1,430,828.87 fine ounces of silver, of which 1,429,555.91 fine ounces were operated upon, and from which there was produced 947,255.37 fine ounces of coin, of the value of $1,310,199.75, or 5,458,705 pieces in subsidiary silver coin, and 30,993.18 fine ounces of silver coin, of the value of $42,845.25 in United States subsidiary coin, or 803,348 pieces for the Government of Costa Rica, 451,231.43 ounces in clippings, condemned coin, and bars were returned to the superintendent prior to settlement and 1,342.20 fine ounces in ingots, condemned coin, and blanks were delivered at settlement. Upon the entire operation there was a wastage of 4.64 fine ounces, of the value of $2.84, being 0.43 per cent of the legal allowance. The percentage of coin produced to the amount operated upon was 68.43.

There was also delivered to this department during the same period 13,586,385.90 ounces of nickel ingots and 7,283 ounces of Scovill blanks, from which there was produced from the metal operated upon 7,027,438.50 ounces of 5-cent pieces, of the face value of $2,186,368.55, or 43,727,371 pieces. Of this amount $154,329.25, or 3,086,585 pieces, were the old design, and $2,032,039.30, or 40,640,786 pieces, of the new buffalo design, all of which and 6,416,424.20 ounces of clippings, condemned coin, and blanks were delivered to the superintendent prior to settlement. There was also delivered at settlement 136,244 ounces in ingots, coin, and blanks. On the entire operation there was a wastage of 13,562.20 ounces, of the value of $175.87. The percentage of the legal allowance, based on the silver allowance, was 99.76. The percentage of coin produced from amount of metal operated upon was 51.77.

This department during the same period received 13,353,939.50 ounces of bronze in ingots and blanks, and 19,961.54 ounces in Scovill blanks, from which there was produced from the metal operated upon 8,242,710.30 ounces of 1-cent coin, of the face value of $824,783.90, or 82,478,290 pieces. This amount, together with 5,120,527.10 ounces in clippings, condemned coin, and blanks, were delivered prior to settlement. The amount returned at settlement was, ingots 6,632.70 ounces, condemned coin and blanks, 177.60 ounces. The wastage on this operation amounted to 3,853.34 ounces, of the value of $49.97. The percentage of wastage was 28.88. The percentage of good coin produced to amount operated upon was 67.38.

In addition to the bullion received for coinage, the following shows the amount used in the manufacture of medals:

Of the 754.574 fine ounces of gold received from the superintendent 286.839 fine ounces were used in the manufacture of medals, which, together with 300.836 fine ounces in clippings were delivered prior to settlement and 167.896 fine ounces returned in settlement.

The amount of fine silver received was 2,167.63 ounces, of which 843.37 fine ounces were used in the manufacture of medals, and that amount, with 1,021.90 fine ounces of clippings, were delivered prior to settlement and 304.41 ounces returned in settlement.

The slight gain in gold and silver is included in the loss in gold and silver coinage.

On this large operation, including coin and medals, the wastage amounted to the very low figure of $411.52.

Total amount of domestic coin for fiscal year ended June 30, 1913.

Items.	Pieces.	Value.
Gold	3,069,405	$19,678,227.50

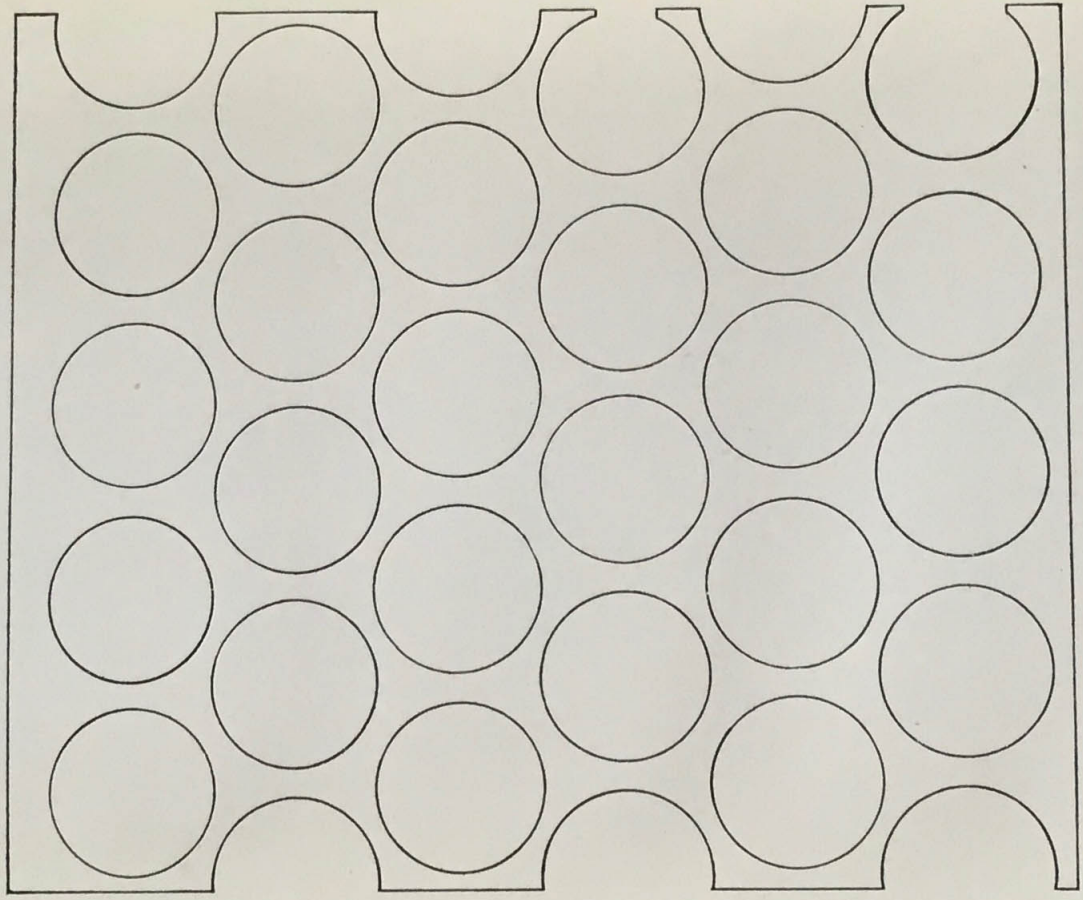
IMPROVEMENTS.

Reference has already been made in last year's report to the minor-coin plant. It was well under way at that time. It has since been completed and is now in operation.



BRONZE CLIPPING, PHILADELPHIA MINT; SIX PIECES CUT AT A STROKE.

Two large 16-inch rolls are breaking down and finishing bronze and nickel. The ingots used are 23 inches long, 4⅛ inches wide, and three-fourths of an inch thick. A copper ingot will produce 2,200 blanks and the nickel ingot about 1,500 blanks. Two cutting presses, each running 170 revolutions per minute, are used in cutting bronze and nickel blanks. When cutting these blanks six pieces of the former and five of the latter are punched at each stroke, making respectively 1,020 and 850 pieces per minute. Up-to-date cleaning and annealing machinery, consisting of rotary annealing furnaces, tumbling barrels, and centrifugal dryers prepare the blanks for stamping. In addition to the rotary annealing furnaces two strip annealing furnaces have been added and gas is used to operate these furnaces. The object of this plant is to keep the workings of the base metal isolated as much as possible from those of the precious metals and also to turn out the minor coin more rapidly and at less expense. Owing to the increasing demand for minor coin we will be compelled to enlarge this plant in the near future by installing two additional rolls and more cutting presses. At times we could use the rolls in our regular rolling room, when not working on gold or silver, but to do so when working the precious metals would be defeating the principal object for which this minor-coin plant was created.

During the past year we have made and placed in operation two reviewing machines similar to those now in use for reviewing coined money. These machines, being much faster and more accurate, will replace the old-style selecting tables.

The only annoying feature we had to contend with during the past year was a very inferior quality and irregular flow of gas for annealing. This appears to have been due to a low grade of naphtha and a much heavier tax on the gas plant. The trouble has been overcome by installing city gas. We find that, owing to the increased price in gasoline, we can buy city gas cheaper than we can make our own supply.

At present the workings are equally balanced, having sufficient facilities for operating the product of one department with the other without any delay or annoyance. It will be our aim to keep up this well-balanced system, thereby reducing the cost of production to the lowest figure.

All gold and silver now used in the operation of coinage is calculated at 1,000 fine instead of 900 standard as heretofore. The figures in the above report from August 23, 1912, are 1,000 fine ounces.

The only blanks now adjusted are the double eagle and eagle; all other denominations, except dimes and the minor coin, are weighted after coinage. Five automatic weighing machines are doing this work.

Our system for keeping the daily records of the metal in operation, recently introduced, is giving entire satisfaction. A tabulated statement of the metal passing from one department to the other during the day is kept. This shows the amount of finished and unfinished metal, together with the wastage or loss at the close of each day's workings.

ENGRAVING DEPARTMENT.

All the dies used in coining operations in all of the mints are made in the engraving department at Philadelphia. The embossed-envelope dies used by contractors supplying envelopes for the Post Office Department and postal savings bank are also made here; also dies for Army and Navy and other authorized public medals. The mint is reimbursed for the actual expenditures for labor and materials on these medal accounts.

The number of dies prepared for United States coinage last year was 2,640. In addition, 175 dies were made for Philippine coinage, 30 for the Post Office Department, 9 for medals, and 36 master dies and hubs; in all 2,890, as follows:

Denomination.	Philadelphia.	San Francisco.	Denver.	Total.

NUMBER OF EMPLOYEES.

The total number of employees in this mint at the close of the fiscal year was 327, distributed in the several departments as follows:

General	163
Assayer's	12
Melting and refining	47
Coining	97
Engraver's	8
Total	327

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 86,278 having been shown through the building by the several guides.

MINT OF THE UNITED STATES AT SAN FRANCISCO.

This mint was in operation throughout the fiscal year

MINOR COINAGE.

Minor coins to the amount of $131,120.14 have been distributed during the year, as follows:

5-cent nickel pieces	$77,152.90
1-cent bronze pieces	53,967.24
Total minor	131,120.14

During the above-mentioned period bronze 1-centavo pieces have been coined for the Government of the Philippine Islands from new metal deposited and from old Spanish copper coins received for recoinage, as follows:

Items.	Value.
1-centavos, from—	
Metal deposited	₱135,233.00
Minor coins for recoinage	59,061.12
Total	194,294.12

SEIGNIORAGE.

The seigniorage on the coinage of purchased metal for the fiscal year was $417,045.19, as shown by the following table:

Items.	Coined.	Seigniorage.
Subsidiary silver coins	$412,000.00	$227,791.87
5-cent nickel coins	142,600.00	136,129.75
1-cent bronze coins	61,040.00	53,123.57
Total	615,640.00	417,045.19

ASSAY DEPARTMENT.

The operations of this department during the fiscal year were as follows:

Total Philippine coinage	7,639,820	734,748.50

MINT OF THE UNITED STATES AT DENVER.

This mint was in operation during the entire fiscal year, the coinage being of the denominations of double eagles, half dollars, nickels, and bronze cents.

The particulars as to bullion deposits and coinage will be found in tables numbered 1 and 3, and in the general coinage statement, numbered 22.

IMPORTANT REFINERY CHANGE.

In the spring of 1913 there was installed in the refinery of this institution a novel special induction potential regulator, embodying the ideas of the foreman of the refinery, Mr. B. P. Wirth, who was seconded in perfecting his plans by Mr. White, chief electrician of the mint. The new equipment consists of the following items:

One special induction potential regulator, single-phase, 60-cycle, oil-immersed primary 2,200, secondary potential 36-volt, maximum secondary current 1,300 amperes, complete, with all necessary oil.

One complete switchboard panel, including wiring, having mounted thereon the following:

One single-phase, 60-cycle, 2-wire watt-hour meter to read direct the current used through the above induction regulator.
One 2,000 to 100 volt potential transformer.
One 2,000-volt series transformer, proper ratio.
One Type H automatic oil circuit breaker with inverse time-limit attachment.

One low-tension switchboard on which are mounted the following:

One voltmeter, maximum scale 30 volts.
One ammeter, scale 1,500 amperes.
One series transformer, ratio 1,500 to 5.
One double-pole, single-throw, 1,600-ampere time switch.
One electrolytic lightning arrester, 2,200 volts, single-phase, 60-cycle, complete, with oil, electrolyte, and horn gaps, for outdoor mounting.

The cost of the above, delivered at the mint, was $1,374.

About the middle of March the general use of the pulsating current in the gold cells in the refinery was commenced. The alternating

current is delivered through a 39-kilowatt induction regulator, with 200 volts on the primary circuit, and a capacity of 36 volts, 1,300 amperes, on the secondary circuit. A direct-current voltage of 1.2 per cell and an alternating-current voltage (maximum) of 1.8 per cell is used; current density, 65 amperes per square foot. The electrolyte contains 60 grams of gold per liter, and from 4 to 7 per cent hydrochloric acid; temperature, 65° C.

NOTABLE BENEFITS.

The benefits of this new system, as applied to the character of bullion received at this mint, can be best shown by a comparison with the operations under the former, or direct-current, system. The refinery has been in operation (in this fiscal year) since October 1, 1912, a period of seven months; the months of October, November, and December, 1912, and January and February, 1913 (which shall hereafter be referred to as the "five months"), the refinery operated under the old system. In March the change was made, and in that month the refinery was operated under both systems, and in April the new system was used exclusively; so, in making comparisons, the month of March will be omitted and the first five months under the direct-current system used, and the average of those months compared with the month of April under the pulsating-current system.

Under the old method there could not be "made up" many gold anode melts, because there was not received enough high-grade bullion to permit it; so, in October, after four months' shutdown of the refinery, 25 were made; in November, 9; in December, 12; in January, 10; and in February, 7; total for the five months, 63 melts, weighing 387,333.32 ounces; while in April, without any change in the character of the deposits, under the new system 44 gold anode melts were made, weighing 236,778.77 ounces, and many more could have been made had they been needed.

During the "five months" the gold anodes amounted to 18.6 per cent of the total amount of bullion operated upon in the refinery, while during the month of April the gold anodes comprised 58.5 per cent of the total operated upon. The radical difference is due to the reduced necessary fineness of the gold anodes.

In the "five months" there were produced 731,669.949 ounces of fine gold and recovered from the slimes (and scrap gold contained therein) 125,821.3 fine ounces; that is, the gold in the slimes equaled in amount 17.19 per cent of the fine gold deposited on the cathodes. In the month of April there were produced 224,161.16 ounces of fine gold and recovered from the slimes (and scrap gold therein) 25,496.89 ounces of fine gold, so that in this month the gold recovered from the slimes equaled in amount 11.37 per cent of the gold deposited on the cathodes, and the average fineness of the fine gold under each system was 0.9995 plus.

Further, in the "five months" acids were used as follows: Hydrochloric, 28,184 pounds, and nitric, 28,023 pounds, an average per month, respectively, of 5,637 and 5,605 pounds. In April, 12,954 pounds of hydrochloric acid were used, an increase above the average of 7,317 pounds, costing $109.75, and 1,041 pounds of nitric acid, a

decrease below the average of 4,564 pounds, which would have cost $422.17, thus making a net saving in acid for April of $312.42.

Further, the cost of operating the refinery for the "five months" was $23,332.94 (including in each month $414.41 as one-ninth shut-down cost), being an average of $4,665.58, and the cost for April (including said $414.41) was $4,478.38.

Further, the production of fine gold for the "five months" was 731,669.949 ounces, an average of 146,333.989 ounces per month, and the production of fine gold in April was 224,161.16 ounces, being an increase over the average of said "five months" of 53 per cent.

Further, in the "five months" there were sent to the refinery 244 silver anode melts, weighing 1,319,761.9 ounces, an average per month of 263,952.38 ounces, and in the month of April there were sent 20 silver anode melts, weighing 104,047.6 ounces; and in the "five months" there were used 139,718.97 ounces of mint fine silver bars in making up the said silver anode melts, which were absolutely necessary on account of the comparatively small amount of silver deposits received at this mint. However, in April, no mint fine silver was used, and also one-half of the silver cells were cut out of operation.

LOWER GRADES BULLION DIRECTLY THROUGH GOLD CELLS.

The most important benefit derived from the operation of this new regulator and transformer lies in the fact that it is possible to treat directly through the gold cells bullion of a much less fineness in gold than it was possible to so treat with the direct current only. Formerly bullion of a less fineness than 900 could not be successfully treated in the gold cells, while the regular bullion, running as low as 800 parts gold, is successfully treated. This table exhibits the fineness of all of the bullion received at this institution, including both the deposits and redeposits, for the months of January, February, and March, 1913, as follows:

	Gross ounces.
Below 700 fine	263,302.87
From 700 to 800 fine	135,901.42
From 800 to 850 fine	77,759.48
From 850 to 900 fine	80,514.79
From 900 to 925 fine	43,757.30
From 925 to 950 fine	24,611.66
From 950 to 999 fine	44,417.23
Total	670,264.75

From an examination of this table it will be readily seen that a large percentage of the bullion received at this institution runs less than 900 in gold; in fact, 83 per cent of it runs less than that figure, and but 17 per cent 900 or more.

The number of silver cells in operation in the refinery have been reduced one-half. Heretofore it has been necessary to rely very largely on the output of the silver cells for bullion of a proper fineness in gold to use in the gold cells. The number of silver cells now in operation will just about take care of receipts of bullion that must necessarily be put through that system. It will also be noted that it is no longer necessary to re-treat mint fine silver in the silver cells, as was formerly the case.

ANODE MELT OF LOW FINENESS.

The anode melt of the lowest gold fineness treated in April was No. 125; the make-up of that melt was as follows:

Items.	Gross weight.	Fineness.	
		Gold.	Silver.
	Ounces.		
One bar from the Seattle office	901.01	819.0	177.2
Do	995.07	820.2	173.2
Do	841.12	881.2	115.0
One Goldfield Consolidated bar	852.78	780.0	116.2
One Homestake bar from Deadwood office	1,965.39	768.0	216.0

The resulting anodes ran 804.7 gold, 171.6 silver. Especial attention is directed to the large amount of silver in the melt.

Gold anode melt No. 1 of this fiscal year, which was treated directly through the gold cells through the old system, ran 921.2 gold, 52 silver.

This equipment and its operation has, without doubt, fulfilled in every respect our expectations. It has increased the output at a reduced cost per ounce. It more than paid for itself during the six weeks it was in operation, from the middle of March to the 1st of May.

ASSAY DEPARTMENT.

The operations of this department during the fiscal year 1913 were as follows:

Items.	Melts operated on.		
	Gold.	Silver.	Total.
Deposits	3,094	629	3,723

COINING DEPARTMENT.

During the year 1913 the coining department operated upon gold, silver, nickel, and bronze, as follows: 445,089.816 fine ounces gold, producing 276,705 ounces coin, valued at $5,720,000; 1,218,179.03 fine ounces silver, producing 795,509.14 fine ounces of coin (half

dollars), valued at $1,100,000; 2,547,803.10 Troy ounces nickel, producing 1,712,782.80 ounces coin, valued at $532,800; 1,458,708.6 ounces bronze, producing 1,097,837.7 ounces coin, valued at $109,810.

Receipts and deliveries by the superintendent of the coining department.

VISITORS AND MINT FORCE.

During the year 64,312 visitors witnessed the coining operations from the balconies.

On June 30 there were 94 officers and employees of this mint, divided as follows among the departments:

General	49
Assay	9
Coining	14
Melting and refining	22

UNITED STATES ASSAY OFFICE AT NEW YORK.

This assay office and refinery were in operation throughout the year, and the records show that the business transacted continued to increase.

On account of the delay in erecting the new building on Wall Street, the clerical force and the assay department are still in the refinery building, and the employees deserve credit for the manner in which they have performed their duties in crowded and unsuitable conditions.

During the year 485,691.188 fine ounces of gold and 428,628.51 fine ounces of silver were transferred to the mint at Philadelphia.

Gold bars were issued to depositors for domestic use in payment for bullion for $3,873,693.93, and gold bars were exchanged for gold coin for domestic use in the arts, etc., for $30,196,829.92, showing a total increase of $5,320,361.80 compared with the previous year.

Gold bars were exchanged for gold coin for export for $41,363,473.89, showing an increase of $21,238,568.04.

The income received for the exchange of gold bars for gold coin amounted to $31,888.42, an increase of $11,323.97.

There were stamped during the year 75,104 bars of fine gold, an increase of 11,292 bars, and 16,018 bars of fine silver, an increase of 3,145 bars.

The total number of deposits received was 13,324, an increase of 659, and 171 redeposits were received from New Orleans and Charlotte, being an increase of 58.

There was received from the sale of platinum and palladium $60,472.29.

MELTING AND REFINING DEPARTMENT.

The melter and refiner received, operated upon, and delivered gold and silver bullion during the fiscal year 1913 as follows:

Receipts and deliveries by the superintendent of melting and refining.

Items.	Gold account.	Silver account.
Receipts:	*Fine ounces.*	*Fine ounces.*

By-products of refinery, United States assay office at New York, fiscal year 1913.

Classification.	Weight.	Value.
	Ounces.	
Sponge platinum	1,403.00	$59,712.09
Sponge palladium	18.10	760.20
Total value	.....	60,472.29

Silver bullion sent to the refinery upon which refining charges were collected contained by assay 2,299,853.78 fine ounces, and silver owned by the Government returned to the refinery for parting purposes upon which no parting charges were collected contained by assay 103,678.08 fine ounces.

All copper recovered during that year is unrefined and in the form of settlement bars and slabs, weighing in gross 22,484.90 ounces, and containing 366.486 ounces of fine gold and 458.32 ounces of fine silver.

ASSAYER'S DEPARTMENT.

During the fiscal year 1913 there were made a total of 109,925 assays upon 40,388 samples, divided as follows:

Items.	Samples.	Assays.
Deposits	32,451	89,864
Refinery	5,944	14,050
Specials	1,993	6,011

Average cost per assay was $0.237.

The deposit samples came from 11,258 melts of gold and 2,237 melts of silver, the refinery samples from 344 melts of fine gold, 594 melts of fine silver, gold and silver anodes, sweeps, and other refinery assays, and the specials from 665 deposits of small samples for the determination of gold and silver fineness. Many of these specials were articles of jewelry and manufacturer's samples, some of them being used for the enforcement of the law relating to the manufacture and sale of jewelry, etc., marked with karat fineness. Others were samples from the Mint Bureau, and there were also many made in a careful investigation of the relative accuracy of humid assays for silver in gold bullion by cadmium-sodium chloride and cadmium-sulpho cyanate methods, the results of which were embodied in reports to the Director of the Mint.

The refinery operations this year, including metal that had accumulated during the suspension of refining, resulted in sweeps containing noticeable amounts of platinum, and the platinum contained was therefore reported, thus decreasing the usual losses in the sale of sweeps.

The large amount of current work (the gold deposits being greater in number than in any previous year) required the constant effort of the force to complete with promptness and accuracy, but special attention has been given to the correct determination of silver in gold bullion by humid assay and to the assay of fine gold from the refinery and in deposits made into certificate bars.

About 95,000 cupels were made, and the silver disks used in alloying the assays for parting were rolled and cut in the department. The fine gold, fine silver, and standard bars made were all stamped with the assay fineness.

The number of officers and employees at this assay office at the close of the fiscal year was as follows:

General department	48
Assayer's department	15
Melter and refiner's department	27
Total	90

THE ASSAY OFFICE OF THE UNITED STATES AT SEATTLE, WASH.

The total number of deposits of gold dust and bullion received during the fiscal year was 1,558 weighing 239,557.528 fine ounces of the value of $5,006,750.25.

The origin of these deposits is shown below:

Total	1,558	291,836.08	287,950.70	3,885.38	1.331

The average fineness of the bullion deposited was as follows: Gold, 831.8; silver, 137.2.

For convenience in shipping to the mint for coinage, 1,252 bars, each under 400 ounces in weight and aggregating 65,437.80 ounces Troy, were melted into 72 large bars.

A summary of the work done in the assaying department during the year is as follows:

Quartation silver manufactured	ounces	450
Cupels manufactured	number	17,500
Bullion assays made	do	6,000
Ore assays made for gold and silver	do	181
Ore assays made for base metals	do	92
Assays of slag, etc., from melting room	do	250
Special bullion assays made	do	27
Mutilated domestic coins tested (gold)	do	58

There were 19 persons, male, employed at the close of the fiscal year.

ASSAY OFFICES AT CHARLOTTE, DEADWOOD, HELENA, BOISE, SALT LAKE CITY, NEW ORLEANS, AND CARSON.

These offices were open throughout the year as usual for deposit of bullion, and the details of their operations will be found in tables 1 to 7 in the appendix.

OPERATIONS OF THE MELTER AND REFINERS AND THE COINERS, FISCAL YEAR 1913.

The quantity of metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1913 aggregated 13,001,515 fine ounces of gold and 12,210,488 fine ounces of silver. There were also operated upon at the coinage mints 68,718,751 ounces of minor coinage metal. The figures in the table following are the actual figures as obtained at the settlements of the accounts:

WASTAGE AND LOSS ON SALE OF SWEEPS AND GAINS FROM OPERATIONS.

The value of the precious metals wasted in the metallurgical and mechanical departments was $17,744.86. A loss of $7,032.61 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as described in the following table:

Items.	Mint at—			Assay office at New York.	Total.
	Philadelphia.	San Francisco.	Denver.		
Gold wastage of melting and refining department	$1,324.57	.....	$548.38	$13,702.74	$15,575.69
Silver wastage of melting and refining department	63.55	.....	.....	1,443.22	1,506.77
Gold wastage of coining department	284.12	.....	35.18	.....	319.30
Silver wastage of coining department	12.24	$98.50	232.36	.....	343.10
Loss on sale of sweeps	233.04	1,213.10	1,652.91	3,933.56	7,032.61
Total	1,917.52	1,311.60	2,468.83	19,079.52	24,777.47
Paid as follows:					
From contingent appropriation	1,917.52	1,311.60	2,468.83	16,968.10	22,666.05
From parting and refining appropriation	.....	.....	.....	2,111.42	2,111.42
Total	1,917.52	1,311.60	2,468.83	19,079.52	24,777.47

The gains from operations in bullion during the fiscal year 1913 amounted to $115,180.02, as follows:

Character of gains.	Amount.
Surplus bullion recovered by the operative officers	$11,359.86
Value of deposit melting room grains and sweeps	33,279.15
Net gains on bullion shipped from assay offices to mints for coinage	739.27
Gain on light weight-gold coin purchased for recoinage	66.71
Receipts from the sale of by-products	69,735.03
Total	115,180.02

Deducting the wastage and loss, $33,144.14, from the gains, $115,180.02, gives a net gain from bullion operation during the fiscal year 1913 of $82,035.88.

LABORATORY OF THE BUREAU OF THE MINT.

From the coinage of the calendar year 1912 the assayer of this bureau tested 170 gold and 378 silver coins, all of which were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation above standard (the legal limit being 1 point above or below) was 0.5 and below, 0.6.

The greatest deviation of silver coins above standard (the legal limit being 3 points above or below) was 1.3 and below, 1.3.

The following table summarizes these assays:

Fineness.	Philadelphia.		Denver.		San Francisco.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.7		1						1
.9		2						2
899.1		10		1		1		12
.3		15		4		1		20
.4					1		1	
.5	3				1		4	
.6	3	29		13	2	5	5	47
.7	12				4		16	
.8	19	46		4	5	9	24	59
.9	30				7		37	
900.0	32	47		14	5	13	37	74
.1	23				1		24	
.2	16	44		15		11	16	70
.3	2						2	
.4	2	20		13		15	2	48
.5	2						2	
.7		15		7		5		27
.9		2		4		6		12
901.1		1		1				2
.3		2				2		4
Total	144	234	None.	76	26	68	170	378
Average fineness	899.96	899.95		900.11	899.82	900.21	899.89	900.09

Besides the coins tabulated above, two coins from the Philadelphia Mint on repeated assays showed wide variations, but within the limits above stated, in the composition of the metal within the coin. Twenty additional assays were made on this lot. There were also examined 32 Philippine silver coins from the San Francisco Mint, which were found to be within the legal requirements as to weight and fineness.

PROCEEDINGS OF THE ASSAY COMMISSION, 1913.

The following-named gentlemen were designated as commissioners to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1912 pursuant to the provisions of section 3547 of the Revised Statutes:

Dr. R. C. Benner, Pittsburgh, Pa.; Mr. Judson Brenner, De Kalb, Ill.; Hon. Theo. Davidson, Asheville, N. C.; Mr. George M. Eckels, Chicago, Ill.; Mr. L. A. Fischer, Bureau of Standards, Washington, D. C.; Mr. Charles R. Fitzpatrick, Warrenton, Ga.; Mr. William F. Gibson, St. Anthony, Idaho; Mr. A. J. Hazeltine, Warren, Pa.; Hon. James H. Manning, Albany, N. Y.; Mr. W. H. Starr, Decatur, Ill.; Mr. Robert A. Roos, San Francisco, Cal.; Dr. Owen Louis Shinn, Philadelphia, Pa.; Mr. Albert L. Smith, Helena, Mont.; Mr. Joseph W. Smith, Philadelphia, Pa.; Mr. Ambrose Swasey, Cleveland, Ohio; Mr. George Vaux, jr., Bryn Mawr, Pa.; Col. Richard J. Woods, Sioux Falls, S. Dak.; Mr. Addison B. Colvin, Glens Falls, N. Y.

The commission met at the mint at Philadelphia on February 12, 1913, and Hon. James H. Manning was elected chairman.

The following committees were appointed by the chairman with the approval of the commission:

Committee on counting.—Mr. Hazeltine, chairman; Messrs. Eckels, Gibson, J. W. Smith, Starr, and Fitzpatrick.

Committee on weighing.—Mr. Fischer, chairman; Messrs. Brenner and Vaux.

Committee on assaying.—Dr. Shinn, chairman; Messrs. Comings, Davidson, A. L. Smith, and Swasey.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to them, and that they were compared with the transcripts kept by the Director of the Mint and found to be correct. After verification the coins were delivered to the committees on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Institutions.	Gold.		Silver.	
	Pieces.	Value.	Pieces.	Value.
Philadelphia	1,969	$12,657.50	12,668	$1,910.10
Denver	.....	.....	7,031	1,163.50
San Francisco:				
United States coin	692	4,960.00	2,749	602.00
Philippine Islands coin	.....	.....	1,222	.....

The committee on weighing reported that the working standards of the mint were compared with the standards in the possession of the mint which were certified to by the Bureau of Standards, test No. 9502, September 15, 1911. The 10-ounce and the 20-ounce weights were found to be correct to within 1 part in 250,000; the 30-ounce and 40-ounce weights were found to be correct to within 1 part in 150,000. The other weights, both larger and smaller, were all found to be correct to within 1 part in 100,000. The peso, 50-centavo, 20-centavo, and 10-centavo weights used in testing the Philippine coins were tested by comparison with the standards of the mint which had been verified by the Bureau of Standards, and the deviations from the statutory standard weights of the coins examined were all within the legal limit of tolerance.

The committee on assaying reported receiving and making assays of coins reserved from the mints at Philadelphia, San Francisco, and Denver, representing the deliveries made by the coiners to the superintendents during the calendar year 1912.

The highest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	900.3
San Francisco	900.3

The lowest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	899.7
San Francisco	899.7

The highest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	900.9
San Francisco	901.1
Denver	901.1

The lowest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	898.6
San Francisco	899.1
Denver	899.1

The highest assay value of the Philippine silver coinage is at—

San Francisco (pesos)	801.1
San Francisco (subsidiary)	750.0

The lowest assay value of the Philippine silver coinage is at—

San Francisco (pesos)	799.6
San Francisco (subsidiary)	748.8

The committee also tested the quartation silver and found it free from gold, and the lead used in the assay of the gold bullion and found it free from gold and silver. The acid used in the humid assay of silver was found to be free from silver and also from chlorine.

The balances used were tested and found to be correct.

The committee therefore deem the assays exhibited in the accompanying schedules to be entirely trustworthy.

COMMITTEE ON RESOLUTIONS.

Mr. Eckels, chairman, submitted the report of the committee on resolutions, which was unanimously adopted, as follows:

Whereas the interest in the national coin collection in the mint at Philadelphia is rapidly increasing because of its educational and historical value; and

Whereas the collection is annually visited by thousands who are anxious to secure a souvenir of the mint; and

Whereas in the near future the United States will consummate one of the greatest engineering projects of the world's history in completing the canal across the Isthmus of Panama: Now, therefore be it

Resolved, First. That the annual assay commission of 1913 hereby renews the recommendations of prior commissions with reference to the maintenance and increase of the national coin collection at the Philadelphia Mint.

Second. That the commission recommends that an official souvenir mint medal of typical and characteristic design be struck, to be sold at a moderate price, and that the proceeds from such sales be devoted exclusively to the extension of the collection under the supervision of the Secretary of the Treasury.

Third. That the commission further recommends that a suitable medal be struck to commemorate the opening of the Panama Canal. Be it further

Resolved, That the thanks of the commission be heartily tendered to Hon. George E. Roberts, Director of the Mint, Mr. J. W. Sheetz, and to the various officials and employees of the mint for their uniform courtesies extended during the session.

Respectfully submitted.

GEORGE M. ECKELS,
Chairman.
JUDSON BRENNER.

MOVEMENT OF GOLD FROM THE PORT OF NEW YORK.

The superintendent of the United States assay office at New York has prepared the following table, giving exports of gold through the port of New York:

Statement of United States gold coin and gold bullion exported from the port of New York to Europe during the fiscal year ended June 30, 1913.

Grand total of exports to Europe		$41,670,529
During the same period there were shipped to West Indies, Mexico, Central and South America, etc., the following:		
United States coin	$23,835,353	
Foreign coin	689,572	
Total gold exports to other ports		24,524,925
Grand total of gold exports		66,195,454

The imports during the same period were as follows:

From Europe:		
United States coin	$1,166,453	
Foreign coin	640,931	
Foreign bullion	9,572,477	
Bullion in ore	7,288	
Total gold imports from Europe		$11,387,149
From other ports (West Indies, Central and South America, Cuba, etc.):		
United States coin	1,058,712	
Foreign coin	978,504	
Foreign bullion	17,735,052	
Bullion in ore	121,218	
Total gold imports from other ports		19,893,486
Grand total of gold imports		31,280,635

NET EXPORTS, UNITED STATES GOLD COIN.

The net exports of United States gold coin since 1870 were as follows:

Imports and exports of United States gold coin since 1870.

1912	678,457.94	634,101.94	44,356.00
1913	414,035.30	388,026.37	26,008.93
Total	77,128,539.32	73,354,082.87	3,774,456.15

The loss on the recoinage of $1,863,637.50 in worn and uncurrent gold coins was $16,757.58 and the net loss on the recoinage of $414,035.30 in worn and uncurrent silver coins was $26,008.93.

The Treasury was reimbursed from the appropriation for that purpose the following losses on uncurrent coin transferred during the fiscal year 1913 for recoinage:

Uncurrent gold coins	$148.43
Uncurrent silver coins	26,000.75
Uncurrent minor coins	8,170.36
Total	34,319.54

UNITED STATES GOLD IN CANADA.

The holdings of United States gold coin in the treasury of the Dominion of Canada on December 31, 1912, was $98,648,736.50. The holdings of United States gold coin of the chartered banks (25 in number) on the same date aggregated $19,210,327.

The total amount of United States gold coin in Canadian reserves on the foregoing date was, therefore, $117,859,063.50.

NOTE.—The blank spaces in this table signify that no satisfactory information is available. In some instances the amount of gold in banks and public treasuries is carried out as the total stock in the country, although an unknown amount is in circulation. The case of Italy is an example of this. The per capita circulation is based upon known amounts only. All estimates for stock of money in circulation must be accepted with reserve.

[1] "Specie" includes subsidiary coin in banks.
[2] Estimates for the United Kingdom prior to 1910 were for coin only; these figures include $100,000,000 for bullion in banks.
[3] Based on estimate of active rupee circulation by Accountant General of India in 1908.
[4] Includes Straits Settlements, Malay States, and Johore.
[5] United States paper currency is legal tender and constitutes a considerable proportion of the circulation.

and per capita in the principal countries of the world, Dec. 31, 1912.

[6] Based upon a calculation by Messrs. P. Arminjon and B. Michel in 1908, who then estimated the stock of gold at 33,000,000 to 41,000,000 Egyptian pounds. The mean of these figures was adopted. Since then the net imports of Egypt, by customs records, have been $50,000,000, but the 1908 estimate has been changed only to the extent of the increase in bank holdings. It does not seem probable that Egypt can have absorbed the amount of gold indicated by the customs records.

[7] Estimate of A. De Foville, 1909.

[8] The figures for the stock of gold in Germany are based upon an estimate by Dr. Arnold, a director of the Reichsbank, of 3,000,000,000 marks in German coin in the country at the end of 1910. At the close of 1912 the Reichsbank held $80,284,892 in bullion and foreign coin.

[9] This paper currency has been reduced to a gold basis at 100 pesos to the United States dollar.

[10] Except Costa Rica and British Honduras (gold standard countries).

MONETARY STOCKS.

The foregoing table is offered with the usual words of explanation and caution. The footnotes should be carefully observed. The information is sought through the diplomatic representatives of the United States at foreign capitals.

The figures for stock of money in banks and treasuries are usually from official sources, although for some of the smaller countries it is sometimes necessary to resort to financial journals. The figures for the amount of money in circulation are of uncertain value, but the best obtainable and thought to be worth giving.

The changes in the table from year to year are not always changes in fact, but sometimes corrections; thus for several years no figures have been given for the gold stock of Germany outside the Reichsbank, but this year an estimate is indicated based upon one by Dr. Arnold.

The figures for the stock of gold in banks and treasuries are greater by $240,000,000 than for the preceding year, the largest gains being by the United States, Russia, and Argentina.

GOLD MOVEMENT TO INDIA.

The movement of gold to India continues to be a matter of world-wide importance and interest. During the last three British fiscal years, ending March 31, the net imports of gold coin and bullion, plus the Indian production, have been approximately as follows:

1910–11	$88,517,513
1911–12	133,560,027
1912–13	132,977,746

It appears that India has taken during the last two years about 28 per cent of the world's production of gold. For the current fiscal year, however, trade conditions have not been so favorable to India and the movement is less.

The above importations came in about equal amounts from London, Egypt, and Australia. The movement from Egypt takes place annually after the crop-moving season in that country is over. Every year there is a larger movement of sovereigns from London to Egypt to move the cotton crop; when this is over and the coin is released the situation is favorable for moving a portion of the supply on to India, one-half of the journey being done.

The proportion of gold bullion in the imports has remained about the same during these three years, the increase being in sovereigns, which by all accounts are entering more and more into the commercial transactions of the people. An extract elsewhere from the report of the Comptroller of the Currency Department of the Indian Government discusses this subject.

There is much evidence that modern economic ideas are making headway in the great population of India. The people are learning to use banks and to invest in the shares of joint stock companies, and as the advantages of such disposition of surplus funds becomes apparent the old hoarding habit is slowly abandoned.

The long-established custom of hoarding the precious metals in the form of personal ornaments has an economic explanation in the Hindu inheritance laws, which do not permit property to descend to the female members of a family. They may, however, retain their personal ornaments.

GOLD AND PRICES.

That there is a relationship between the supply of gold and the prices of commodities scarcely admits of controversy, but there are so many other factors in price making that great practical difficulty attends upon any effort to identify and estimate the particular effect of the changes that occur from time to time in the output of gold.

The production of gold in the world has been practically stationary for the last five years, and industrial consumption plus the movement to India have taken approximately one-half of the output. The remainder has been sufficient to allow of important annual additions to monetary stocks, and in some countries, notably the United States, it can scarcely be questioned that these additions have been related to a long-continued period of enterprise and credit expansion.

The most persuasive statement of the affirmative theory is that, however many influences may have participated in making the present price level, the level could not have been made as high as it is without the enlarged supply of gold. If the gold supply has anything to do with prices, this proposition can hardly be controverted, and if anyone is disposed to deny the quantitative theory in toto, he should consider what results would ensue from the discovery of a cheap process of artificially producing gold. Will anybody contend that such a discovery would have no effect upon monetary or industrial conditions? On the other hand, the dramatic effect of the phenomenal increase in the production of gold, coincident with the general rise of prices, has fixed attention upon this factor and given it, possibly, an undue importance. Other and very important influences have undoubtedly contributed to the movement.

It is evident that an increasing production of gold has a direct effect in swelling bank reserves. The new gold flows into the banks, not only for safekeeping but to create balances against which the mine owners may draw to meet operating expenses. Even for the best fields, approximately 75 per cent of the credits so created must be used for this purpose. But, unlike bank credits created by other industrial operations, these credits, accompanied by an equal amount of new gold, enlarge in a much greater degree the ability of the banks to make loans. The entire gold-producing industry of the world may not, as an industry, be more than self-supporting, but when the product in the form of money enters bank reserves it may as the basis of credit create purchasing power to several times its own value.

One way or another the new supplies of credit will force their way into use. They make capital available for new undertakings and for the enlargement of old ones, and in this era of industrial activity and change there is practically no end of promising opportunities for investment. There are many countries, both old and new, with vast undeveloped resources appealing for capital. Competent authorities have estimated that as much as $3,500,000,000 of foreign capital has been invested in Canada in the last dozen years in constructive work. Probably $800,000,000 has been similarly invested in Brazil in the last ten years. And these are new countries with comparatively small populations. The sums so invested in the United States, of course, have been very much greater than in these two put together.

The entire organization and equipment of the industrial world is constantly undergoing change. The alterations in power equipments alone, resulting from improvements in the steam engine, the development of internal combustion, and the various applications of electricity, call for enormous amounts of capital, or, for what amounts to the same thing, credit accommodations. Modern industrial equipment, like the modern battleship, does not wear out, but is forced out by the pressure of the ever-coming new and superior substitutes. This entire movement is stimulated by increasing bank reserves. There is a familiar tendency in the business world to alternating periods of expansion and contraction, the former running its course until credit is strained, when reaction sets in and is more or less protracted according to the degree in which credit may have been overused. But with constantly increasing bank reserves the periods of expansion are longer maintained and the periods of reaction are sooner overcome.

The growing importance of stock and produce exchanges and the vast multiplication of corporate securities have been important factors in the expansion of credits, and therefore had an effect upon prices. In the last analyses it is effective demand that influences prices, and the demand is usually financed by credit, which in turn must have some relation to the gold reserves. But the great supply of dividend-paying stocks and bonds now in the possession of the public affords a most convenient facility by means of which loans may be obtained. No doubt there is a great deal more borrowing for miscellaneous investments upon the securities of a corporation whose issues are widely distributed than there was upon the credit of the same business before it was incorporated or while the ownership was in few hands. Perhaps it is not too much to say that in times of prosperity, when the spirit of money-making is infectious, it is difficult for the average man to keep good collateral in his own box while many inviting opportunities for investment pass by.

It will naturally be said, however, that if the present rise of prices is due to an extraordinary demand for commodities and labor, to be used in construction and for improved equipment, there should be results in the way of an increased production of commodities at lower costs, and that these results in turn should show in lower prices.

This is a perfectly logical conclusion, and the only answer that can be made is that unless the world has been wasting its savings in unprofitable investments or population has become unduly congested where the cost of living is necessarily high, a reaction in the course of prices should soon appear.

A study of all price tables will show that the level of prices under review has been carried up by the rise in articles of food and raw materials. Manufactures have either not risen at all or have risen by a lower percentage than the raw materials and labor which have entered into them. The greatest rise of all in the last 15 years in the United States has been in lumber, but it is not necessary to resort to the gold hypothesis for an explanation in this case. All of the products of timber have been going higher because near-by supplies were being exhausted. And so all of the products of the soil have been going higher because the cheap, easily tilled prairie lands of this country have been occupied, while our population continues to increase. Meats are dearer for the obvious reason that cattle can

no longer be pastured free on the public domain; the great ranches and herds have been broken up, and for some years the supply of meat animals in the United States has not been increasing. In all price tables these products of the farms and forests and public lands are very important factors.

For a long time, during the period of land settlement in the United States, when it cost but little to open new farms, the prices of farm products were so low as to afford very small compensation to the producers. The desire to own land, which was expected ultimately to increase in value, was the chief inducement for the opening of new farms, and it was sufficient to keep the price of products down close to the bare labor cost, upon most farms, of producing them. With the cheap and easily tilled lands occupied, there was a slowing down in agricultural expansion. Since then development in agriculture has not kept pace with progress in manufactures or transportation.

Since the Baring crisis in 1890, caused by overfree investments in Argentine railways, there has been no extensive railway construction opening up large areas of cheap lands until the Canadian construction began a few years ago. And while there has been an important movement of farmers into the Canadian Northwest the results of the development expenditures have only begun to make themselves felt. It is, however, true that wheat, the principal crop of Canada, is one of the farm staples that has made the smallest advance.

The expenditures of capital upon the railways of the United States during the last 15 years have been enormous, but they have been mainly directed to the improvement of the existing lines and not to the opening of new territory, as in the decade from 1881 to 1890. The roads have been straightened, grades have been reduced, additional tracks have been provided, heavier rails have been laid, new and stronger bridges have been built; and along with these betterments upon the roadways have come more powerful and more economical locomotives, and freight cars of much greater capacity. These improvements have called for a vast amount of labor and materials and have had an important influence upon wages and prices. They have undoubtedly been very effective for the purpose for which they were made, to wit, an economy in labor and power in the operation of the lines. Judged by the higher efficiency obtained, these outlays were well worth making, but the rising prices of timber, ties, and various supplies, and the higher wages required of the companies by reason of the higher cost to their employees of food and clothing, have apparently more than offset all the gains accomplished by reconstruction and improved equipment.

And the situation of the railways is illustrative of what has occurred throughout the industries. In all lines heavy investments of capital have been made for the purpose of reducing labor costs, and results have been obtained which would have naturally appeared in lower prices if the higher costs of raw materials and of the food and clothing of the operatives had not intervened and overbalanced them. Indeed, it would require nothing less than a revolution in the methods of industry to offset in importance a rise of 50 per cent in the cost of the food staples and of such common commodities as cotton, hides, and lumber.

According to the tables of the United States Bureau of Labor, the average of prices of farm products during the year 1912 was 171.3

per cent of the average for the 10 years 1890–1899, while the average of all the commodities included in its tables was but 133.6 of the same base. It is evident that the commodities other than farm products increased by a less percentage than 133.6, and it is easy to believe that the rise of 171.3 in farm products, which include not only food but the raw materials of clothing, was the main factor in the rise of other commodities.

The percentages of increase in certain raw commodities and of merchantable products related thereto, as they appear in the tables of the United States Bureau of Labor for the year 1912, are given below:

Average wholesale prices for the year 1912.

[1890–1899=100.]

Raw commodities.	Per cent.	Manufactures.	Per cent.
Cattle, good to choice	177.5	Beef sides	157.3
		Hides	187.8
		Tallow	142.8
Cotton, raw	148.2	Calico, American standard prints	100.4
		Amoskeag ginghams	117.3
		Cotton flannels, 3½ pounds to yard	131.1
		Cotton thread, Coats	126.4
		Hosiery, women's cotton, seamless, fast black, 26 to 28 ounces, 160 to 170 needles	89.9

		Suitings, indigo blue, all wool, Middlesex	115.1

WORLD PRICES.

The British Board of Trade has issued a special report upon rents, prices, and wages in 1912, and in this report includes a comparative showing of the rise of prices of food since 1900 in 11 foreign countries and several of its own colonies. In this table the figures for each country are all reduced to percentages of the price level of 1900.

The figures for several countries, including the United States, for 1912 were not available when the report was closed. The close correspondence between the figures for the United States and Canada is worthy of note and, of course, was to be expected:

Index numbers of changes in the level of food prices since the year 1900 in the United Kingdom and certain foreign countries and British dominions oversea.

[1900=100.]

Country and nature of index number.	1900	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911	1912
United Kingdom:													
Retail prices of 23 articles of food in London, weighted, according to workmen's consumption	100	100	101	103	102	103	102	105	108	108	109	109	115
Foreign countries:													
Austria-Hungary—													
(*a*) Austria, retail prices of 14 articles of food in Vienna (unweighted)	100	100	99	101	105	108	113	113	118	120	126	128	135
(*b*) Hungary, retail prices of 48 articles of food in 22 principal towns (unweighted)	100	101	102	103	111	122	118	122	128	131	129	137	....
Belgium—

UNITED STATES GOLD COIN IMPORTED AND MELTED BY VARIOUS COUNTRIES DURING THE CALENDAR YEAR 1912.

The following table shows the amount of United States gold coin imported by various countries and the value of the United States gold coin melted at their mints:

Countries.	Imports of United States gold coin.	United States gold coin melted.
Austria-Hungary	$68,100	$68,100
Argentina	8,540,000	.....
Brazil	1,855	.....
Canada	7,484,089	800
Cuba	778,363	.....
Japan	1,636	40,595
Servia	500	.....
Panama	80,000	.....
Costa Rica	1,624,623	.....
Venezuela	1,010,120	.....
Total	19,589,286	109,495

[1] Data for the year 1900 are not available.

VALUES OF FOREIGN COINS.

The following values calculated by the Director of the Mint were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1913:

Values of foreign coins.

Country.	Legal standard.	Monetary unit.	Value in terms of U. S. money.	Remarks.[1]
Argentina	Gold	Peso	$0.9647	Currency: Depreciated paper, convertible at 44 per cent of face value.
Austria-Hungary	do	Crown	.203	
Belgium	Gold and silver.	Franc	.193	Member of Latin Union; gold is the actual standard.
Bolivia	Gold	Boliviano	.389	12½ bolivianos equal 1 pound sterling.
Brazil	do	Milreis	.546	Currency: Government paper, convertible at $0.3242 to the milreis.
British colonies in Australasia and Africa.	do	Pound sterling	4.8665	
Canada	do	Dollar	1.000	
Central American States:				
Costa Rica	do	Colon	.465	
British Honduras.	do	Dollar	1.000	
Guatemala	Silver	Peso	.435	Currency: Inconvertible paper; exchange rate, 16 to 18 pesos equal $1.
Honduras				Currency: Bank notes; exchange rate Mar. 20, 1912, $0.415.
Nicaragua				Currency: Inconvertible paper; exchange rate, 16¾ to 17 pesos equal $1.
Salvador				Currency: Convertible into silver on demand.
Chile	Gold	do	.365	Currency: Inconvertible paper; exchange rate approximately $0.2061.
China	Silver	Tael—Amoy	.713	
		Tael—Canton	.711	
		Tael—Chefoo	.682	
		Tael—Chinkiang	.697	
		Tael—Foochow	.660	
		Tael—Haikwan (customs).	.726	
		Tael—Hankow	.667	
		Tael—Kaiochow	.691	
		Tael—Nanking	.706	
		Tael—Newchwang	.669	
		Tael—Ningpo	.686	
		Tael—Peking	.695	
		Tael—Shanghai	.651	
		Tael—Swatow	.659	
		Tael—Takau	.718	
		Tael—Tientsin	.691	
		Dollar—Yuan	.519	
		Dollar—Hongkong	.469	
		Dollar—British	.469	
		Dollar—Mexican	.473	
Colombia	Gold	Dollar	1.000	Currency: Inconvertible paper; exchange rate approximately $102 paper to $1 gold.
Denmark	do	Crown	.268	
Ecuador	do	Sucre	.487	

[1] The exchange rates shown under this heading are recent quotations and given as an indication of the values of currencies which are fluctuating in their relation to the legal standard. They are not to take the place of the consular certificate where it is available.

Values of foreign coins – Continued.

Country.	Legal standard.	Monetary unit.	Value in terms of U. S. money.	Remarks.
Egypt	Gold	Pound (100 piasters)	$4.943	The actual standard is the British pound sterling, which is legal tender for 97½ pisaters.
Finland	do	Mark	.193	
France	Gold and silver.	Franc	.193	Member of Latin Union; gold is the actual standard.
German Empire	Gold	Mark	.238	
Great Britain	do	Pound sterling	4.8665	
Greece	Gold and silver.	Drachma	.193	Member of Latin Union; gold is the actual standard.
Haiti	Gold	Gourde	.965	Currency: Inconvertible paper; exchange rate approximately $0.2941.
India (British)	do	Rupee	.32441/3	15 rupees equal 1 pound sterling.
Italy	Gold and silver.	Lira	.193	Member of Latin Union; gold is the actual standard.
Japan	Gold	Yen	.498	
Liberia	do	Dollar	1.000	Currency: Depreciated silver token coins. Customs duties are collected in gold.
Mexico	do	Peso	.498	
Netherlands	do	Florin	.402	
Newfoundland	do	Dollar	1.014	
Norway	do	Crown	.268	
Panama	do	Balboa	1.000	
Paraguay	Silver	Peso	.435	Currency: Depreciated paper; exchange rate, 1,550 per cent.
Persia	Gold and silver.	Kran	.1704	This is the value of the gold kran. Currency is silver circulating above its metallic value; exchange value of silver kran, approximately $0.0875.
Peru	Gold	Libra	4.8665	
Philippine Islands	do	Peso	.500	
Portugal	do	Escudo	1.080	Currency: Inconvertible paper; exchange rate approximately $0.9394.
Roumania	do	Leu	.193	
Russia	do	Ruble	.515	
Santo Domingo	do	Dollar	1.000	
Servia	do	Dinar	.193	
Siam	do	Tical	.3708	
Spain	Gold and silver.	Peseta	.193	Valuation is for the gold peseta; currency is silver circulating above its metallic value; exchange value approximately $0.1794.
Straits Settlements	Gold	Dollar	.5677	
Sweden	do	Crown	.268	
Switzerland	do	Franc	.193	Member of Latin Union; gold is the actual standard.
Turkey	do	Piaster	.044	100 piasters equal to the Turkish pound.
Uruguay	do	Peso	1.034	
Venezuela	do	Bolivar	.193

[1] Amount coined to Feb. 12, 1873, $8,031,238.

Silver-dollar coinage under acts of—

Apr. 2, 1792		$8,031,238
Feb. 28, 1878	$378,166,793	
July 14, 1890	187,027,345	
Mar. 3, 1891	5,078,472	
		570,272,610
Total		578,303,848

[2] Coinage limited to export demand, joint resolution July 22, 1876.
[3] 12½ grams, or 192.9 grains.
[4] Total amount coined.
[5] 6¼ grams, or 96.45 grains.
[6] 5 grams, or 77.16 grains.
[7] 2½ grams, or 38.58 grains.
[8] Composed of 75 per cent copper and 25 per cent nic
[9] Composed of 95 per cent copper and 5 per cent tin and zinc.
[10] By proclamation of the President, in conformity with act of Mar. 3, 1795.
[11] Composed of 88 per cent copper and 12 per cent nickel.

The foreign gold and silver coins melted by the countries of the world during the calendar years 1910, 1911, and 1912, so far as have been reported to this bureau, are exhibited in the following table:

No. **20.**—*Foreign coins melted by various countries.*

Countries.	1910		1911		1912	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$2,666,390	$885,699	$9,550,494	$5,049	$1,298,696	$21,071
Canada			7,037

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and Government notes, both covered and uncovered, of the different foreign countries, published annually in the reports of this bureau, are obtained directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of the interrogatories covering the points on which information is sought from the Governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Following is a copy of the list of the interrogatories forwarded to foreign Governments for the year 1912:

1. What was the amount of gold and silver coinage during the calendar year 1912; new coinage, and domestic and foreign recoinage?

2. (*a*) Was any coinage executed at your mint for other Governments during the year 1912? If so, state character and amount of same.

2. (*b*) Was any coinage executed at foreign mints for your Government? If so, state character and amount of same.

3. What was the estimated weight of fine gold and silver used in the industrial arts during the calendar year 1912?

3½. What amount of gold and silver in the form of old plate, jewelry, and other old material was returned from use in the industrial arts to monetary use by being deposited at the mint for coinage?

4. What was the total import of United States gold coin and what amount was deposited and melted at the mints during the year 1912?

5. What was the weight, expressed in kilograms fine, and the value of the gold and silver produced from the mines of the country during the calendar year 1912? Give the product of the colonies of the country, naming them separately.

6. What, approximately, was the stock of gold and silver coin and bullion in the country on December 31, 1912? Give stock in public treasuries and banks, and in circulation, separately.

7. What was the amount of Government and bank notes outstanding at the end of the year 1912, and what amount was not covered by gold coin and bullion and legal-tender silver coin held for their redemption?

8. Is gold at a premium as compared with the actual currency of the country? If so, what is the actual currency?

9. Were any laws passed during the year 1912 affecting the coinage, currency, or banking? If so, please forward copies of the same.

10. Is there a report published on the operations of the mint? If so, please forward a copy, also a report of the department of mines.

11. (*a*) What was the import and export of gold during the calendar year 1912, the value of coin, bullion, and ore, to be given separately and by countries?

11. (*b*) What was the import and export of silver during the calendar year 1912, the value of coin, bullion, and ore to be given separately and by countries?

12. Please examine the appended description of the coins of your country, bringing it down to date with corrections.

NORTH AMERICA.

CANADA.

Answers to interrogatories, 1912.

1. Gold and silver coined during the calendar year 1912:

GOLD.

Denomination.	Pieces.	Value.
10 dollars	70,695	$706,950.00
5 dollars	154,152	770,760.00
Total	224,847	[1] 1,477,710.00

SILVER.

50 cents	283,248	$141,624.00
25 cents	2,504,085	626,021.25
10 cents	3,237,096	323,709.60
5 cents	5,849,562	292,478.10
Total	11,873,991	[2] 1,383,832.95

[1] Of which $1,475,185 was new coinage and $1,735 was recoinage of domestic coins and $790 from foreign coins.

[2] Of which $1,300,329.15 was new coinage and $83,503.80 was recoinage of domestic coins.

Face value of gold coins remelted:	
British	$1,752
United States	800
	2,552
Face value of silver coins remelted, Canadian	88,763

2 (*a* and *b*), 9, 10, and 11. None.

* * * * * * *

4. Gold and silver returned from use in the industrial arts to monetary use deposited at the mint for coinage:

Description.	Gold.	Silver.
Jewelry and dental scrap	*Fine ounces.* 1,451	*Fine ounces.* 656

5. Gold coin imported, $7,484,089 (from United States, British, Canadian, and foreign, but probably nearly all United States gold coin).
Gold coin melted at mints, $800.

* * * * * * *

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Description.	In public treasuries.	In banks.	In circulation.
Gold coin:			
British sovereigns	$4,554,691.31		
Canadian	650,185.00	[1] $33,780,333.00	$823,640.00
United States	98,648,736.50		
Gold bullion	222,933.99	[2]	
Silver coin	208,900.00	[2]	

[1] Specie held by banks.

[2] Amounts of gold and silver not given separately; all silver is of denominations below the dollar and for subsidiary use.

8. Government and bank notes outstanding at the end of the year 1912:

Items.	Notes outstanding.	Gold holdings.
Government	$115,836,488.40	(1)
Banks of issue	110,048,357.00	(1)

[1] See above.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1912:

GOLD.

Countries.	Imports.		Exports.	
	Coin.	Bullion.	Coin.	Bullion.
United States	$7,484,089	$1,310,486	$13,792,183	.....
Great Britain	5,137	116	.....	.....

YUKON TERRITORY.

Gold bullion exported to the United States during 1912, $4,161,939.

CANADIAN HOLDINGS OF UNITED STATES GOLD.

[From Monetary Times, of Toronto, 24th May, 1913.]

Hon. W. T. White, the finance minister, when discussing the Canadian gold coinage and the operations of the Ottawa Mint in Parliament, explained that of gold amounting to something over $100,000,000 held in the Dominion Treasury, $90,000,000, or nearly 90 per cent, was represented by American coins.

At the same time the banks held in their vaults some $39,000,000 specie. It is probable that two or three millions of this would represent Canadian silver coins. Allowing for that, and assuming that 80 per cent of the remainder consisted of American coins, that would make altogether about $118,000,000 United States gold coins held in Canada.

Each member of the Dominion Parliament is naturally anxious to forward the interests of the particular constituency he represents. As gold mining is the principal industry prosecuted in the Yukon, the member for that territory looks regretfully at this huge mass of metal bearing the superscription of a foreign power. He, and others with him, would like to see the foreign coins exported and replaced by Canadian coins minted from our own gold.

From the point of view of the Yukon mines, so long as they get the best possible prices for their output of bars or nuggets, it does not matter whether the metal goes to the States or Ottawa.

The action of the minister in abolishing the fee heretofore charged by the assay office at Vancouver was about as far as, it would seem, the Government could go at present in encouraging the home gold-mining industry.

Suppose one of the banks in Canada undertakes to finance one or more new enterprises and places itself under obligation to advance, say, $1,500,000 in connection therewith. The bank has reason to believe that when the advance is made it will have to meet an adverse balance at the clearing house of $1,500,000. It does not

wish to disturb Canadian borrowers, so it calls loans in New York and lodges the money with its New York correspondents.

Then it tries to sell New York exchange in Montreal and Toronto—that is, it offers its drafts on New York in exchange for "legals."

But it happens that the other banks do not wish to buy the drafts at this time. So the only thing to do is to ship gold to Montreal. The bank's agents or correspondents in New York take gold certificates to the subtreasury and receive ten-dollar and twenty-dollar pieces. They are boxed up and sent by express.

Next day they are in Montreal, and the bank, perhaps, has them delivered to the receiver general. The packages are verified, and the receiver general gives the banks $1,500,000 in $5,000 Dominion notes. This illustration shows how the amount of American coin held in Canada tends to increase.

Sometimes it happens that gold has to be shipped to New York. The customers of one of our banks may have imported a large amount of American goods. They ask the bank for loans to pay off these debts.

The loans are granted and proceeds placed to credit of the borrowers' accounts. Then the borrowers ask for drafts on New York for remittance to their creditors. The bank's account in New York has not enough funds to meet the drafts. So it tries to buy New York funds from the other banks, offering "legals" in exchange. But the other banks have no New York funds to spare; and it develops that gold must be exported.

The bank takes its large $5,000 Dominion notes to the receiver general and gets American coin, which is shipped to New York. As soon as it arrives it goes into the subtreasury and gold certificates of large denominations are given in exchange.

There is no delay; the money goes to credit in the other market next day; the cost of sending gold from Montreal to New York is about five sixty-fourths of 1 per cent. New York is the place at which the Canadian banks have to meet their international liabilities and the international liabilities of their customers, and it is for the advantage of all concerned for them to have in their possession a large reserve in money which is legal tender at face value in that market.

Imagine next that the gold held by the Dominion Treasury and by the Canadian banks was all Canadian coins. Sooner or later there would arise an occasion in which the banks were obliged to ship gold to New York for the purpose of paying the international debts of their customers. They would, therefore, have to send the Canadian coins. The shipment would get to New York next day, the same as in the other case, but the coins would not pass at their face value. They would be of no use to the New York banks, and the subtreasury would buy them by weight.

It would take perhaps three days to assay them and determine the exact weight. Then the money would be paid over—probably with deductions for short weight. The loss of three days' interest on a shipment of $1,000,000 would be quite an item; and the deduction for short weight also might be important. The coins would be melted down and recoined into United States money.

So it is easy to see that as there is no demand for gold coins in day-to-day business in Canada, and as they are not suitable for sending to the only market in which the banks can use gold coins, it would be an economic blunder to coin a vast amount merely to have them lie in the vaults of the Dominion Treasury and of the banks. Nobody except a few officials would ever see them, and when they were exported they would be demonetized at once.

CENTRAL AMERICA.

MEXICO.

1. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Peso	322,000	$322,000
50-centavo	3,736,000	1,868,000
20-centavo	625,000	125,000
10-centavo	1,350,000	135,000
Total	6,033,000	[1] 2,450,000

[1] Of which amount $871,270.10 was recoinage of domestic coins.

The face value of old silver coins remelted was $783,000.

2 (*a*) and (*b*), 4, 5, 6, 8, 9, 10, and 11. None.

3 and 7. No data.

Imports of precious metals, fiscal year 1911–12.

[From Anuario de Estadistica Fiscal (Year book of Official Statistics), 1911-12.]

	Pesos.
Gold, silver, and platinum (free of duty)	29,430.00
Wire, beads, and other manufactured silver goods, with and without gold plating	3,587.10
Gold beaten into leaves for gilding	9,407.87
Silver beaten into leaves for plating	216.74
Gold and silver legal foreign coins	945,745.69
Mexican silver coins of 1 peso	1,466.70

Exports of precious metals, fiscal year 1911–12.

Items.	Exports.	
	Gold.	Silver.
	Pesos.	*Pesos.*
In ore and dust	1,892,516.59	6,881,242.69
Mexican coin	582,237.00	714,200.00
Foreign coin	303,770.00	14,407.02
Bullion	46,963,542.00	40,330,550.16
Cyanides	29,665.26	172,125.54
Sulphides	133,383.68	259,357.24
In cakes of lead	.....	24,902,370.18
Combined with copper	.....	16,294,101.16
Total	49,905,115.13	89,568,353.99

COSTA RICA.

1. There was no gold coined for Costa Rica during the year 1912. Silver to the amount of $24,903.75, in denominations of 5 and 10 centimos, were coined at the Philadelphia mint.

2 (*b*). Coinage executed for Costa Rica at Philadelphia mint, as above.

2 (*a*), 4, and 10. None.

3. There are no available statistics regarding the amount of gold and silver used in industrial arts, but the amount is inconsiderable.

5. United States gold coin imported, $1,624,623, none of which was remelted. Costa Rica has no mint.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Description.	In public treasuries.	In banks.	In circulation.
Gold coin	.....	$1,701,771	(1)
Silver coin	$348,750	.....	$373,653
Total	348,750	1,701,771	373,653

[1] Very little.

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	$348,750	.....	$348,750
Banks of issue	2,048,964	$1,701,771	.....
Total	2,397,714	1,701,771	348,750

9. *Premium on gold.*—The currency of the country is on a gold basis and maintained at par, the colon being worth $0.415 United States currency. The average premium for the year 1912 was 2.1834; the par value being $1 United States currency equals 2.15 colones.

12 (*a*). During 1912 no gold bullion or ore were imported. United States gold coin to the amount of $1,424,995 was imported.

The export of gold corresponds to the amount produced in the mines of this country, which is, in bullion and concentrates, equal to $461,739. This is a decrease of $286,214 from last year.

12 (*b*). The importation of silver coin was $24,903.75, which is the amount of small coin made for this country at the Philadelphia Mint.

The exportation of silver coin amounted to $1,650. No silver ore was imported during 1912. No silver ore was exported, but silver bullion to the value of $355,826 was shipped from Costa Rica.

HONDURAS.

1. Gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Gold (new coinage), 1 peso	350	$350.00
Silver (new coinage), peseta pieces	8,283	2,070.75

2 (*a* and *b*), 10, and 11. None.

* * * * * * *

4. Old material returned from industrial use, deposited at the mint for coinage:

Description.	Silver.
	Fine ounces.
Candlesticks and plates (of silver)	60

* * * * * * *

7. Approximate stock of silver coin in the country on December 31, 1912:

Classification.	In public treasuries.	In circulation.
Silver coin	$122,485.76	$2,500,000

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Legal-tender silver holdings (according to law).
	Pesos.	*Per cent.*
Banks of issue	384,462	40

9. Premium on gold during 1912: Highest, 143 per cent; lowest, 130 per cent; average, 137 per cent.

12 (*a* and *b*). Imports and exports of gold and silver during (fiscal year) 1912:

Country.	Exports.				
	Gold bullion.	Silver bullion.	Silver coin.	Amalgam.	Cyanide.
	Pesos.	*Pesos.*	*Pesos.*	*Pesos.*	*Pesos.*
United States	81,572.96	142,492.97	323,214.50	227,716.02	1,611,059.80
France	2,500.00				
Germany	49,790.00	29,875.00			
England				6,437.50	
Total	133,862.96	172,367.97	323,214.50	234,153.52	1,611,059.80

No importation given.

NOTE.—The above is data received from the ministry of finance and public credit.

NICARAGUA.

1. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Silver (new coinage):		*Cordobas.*
1 cordoba	35,000	35,000
50 centavos	260,000	130,000
25 centavos	320,000	80,000
10 centavos	230,000	23,000
Total	845,000	268,000

2 (*a* and *b*). There is no mint in Nicaragua. All the silver coins enumerated above were minted at the Birmingham Mint, England.

3. Gold and silver used in industrial arts, negligible.

4, 5, and 11. None.

* * * * * * *

7. Approximate stock of gold and silver in the country on December 31, 1912, none. Silver coin not circulated until March 24, 1913.

8. Government notes outstanding at the end of the year 1912:

Notes.	Notes out standing.
Government notes	$25,000,000

9. Premium on gold during 1912: Highest, 18 to 1; lowest, 12½ to 1; average, 15 to 1. The actual currency of the country is the cordoba, equal to $1 United States currency.

10. (Copy of proposed currency law follows).

12 (*a* and *b*). See mine-production figures.

COMMERCE OF NICARAGUA, 1910.

[From Bulletin of the Pan American Union, January, 1913.]

The exports of gold and silver as given in the report of the acting consul general of Great Britain for the year 1910 were as follows:

Amalgamated gold	$329,362
Cyanide gold	51,224
Concentrated metals	1,424
Gold in bars	279,946
Smelted gold	175,650
Precipitated gold	52,940
Auriferous copper	97
Silver in bars	4,189
By countries as follows:	
Amalgamated and cyanide gold, to United States	$380,586
Concentrated metals, to United Kingdom	1,424
Gold in bars, to—	
United States	156,954
United Kingdom	122,992
Smelted gold, to—	
United States	141,620
United Kingdom	29,996
France	4,034
Precipitated gold, to—	
United Kingdom	49,465
United States	3,475
Auriferous copper, to United States	97
Silver in bars, to United Kingdom	4,189

New currency act, effective March 23, 1913.

ART. 1. The standard unit of value of the Republic shall be the cordoba, which shall contain 1 gram 672 milligrams of gold, nine-tenths fine, which shall be divisible into one hundred equal parts.

ART. 2. The gold coins of the Republic shall be as follows:

The piece of 10 cordobas, which shall contain 16.72 grams of gold, nine-tenths fine.

The piece of 5 cordobas, which shall contain 8.36 grams of gold, nine-tenths fine.

The piece of 2½ cordobas, which shall contain 4.18 grams of gold, nine-tenths fine.

ART. 3. The silver and minor coins of the Republic shall be as follows:

The cordoba, which shall contain 25 grams of silver, nine-tenths fine.

The half-cordoba, which shall contain 12½ grams of silver, eight-tenths fine.

The quarter-cordoba, which shall contain 6¼ grams of silver, eight-tenths fine.

The piece of 10 centavos, which shall contain 2½ grams of silver, eight-tenths fine.

The piece of 5 centavos, which shall be of the weight of 5 grams, of which 75 parts shall be of copper and 25 parts of nickel.

The piece of 1 centavo, which shall be of the weight of 4 grams, of which 95 parts shall be of copper and 5 parts of tin and zinc.

ART. 4. The tolerance, or allowance for wear, of all the coins of the Republic, shall be the same as for coins of corresponding value under the laws of the United States, subject to alteration by Executive decree, with the approval of the parties named in section 7 of this act.

ART. 5. The amount of the coinage of both gold and silver shall be determined by the national bank, under regulations approved by the Executive; provided, that arrangements may be made whenever it seems proper and desirable, by agreement between the Executive and the national bank, for the unlimited coinage of gold.

ART. 6. The national bank shall have and exercise all the powers granted in the banking concession attached as Schedule C to the trust and fiscal agency contract entered into between the Republic of Nicaragua and Messrs. Brown Brothers & Company and J. & W. Seligman & Company, of New York, on September 1, 1911, as modified by the treasury bills of agreement between said parties of the same date.

ART. 7. That the minister of finance is hereby directed to subscribe on behalf of the Government of Nicaragua not exceeding $500,000 of the capital of the National Bank of Nicaragua authorized by the treasury bills agreement between the Republic and Messrs. Brown Brothers & Company and J. & W. Seligman & Company, of New York, dated September 1, 1911, and to pay, in accordance with said agreement, such subscription from the proceeds of the loan provided for in said agreement.

ART. 8. That the President of the Republic is authorized to make an agreement with the bankers named as parties in the treasury bills agreement above referred to, by which the national bank shall agree, on or before July 1, 1912, or with the approval of the bankers at a later date, to exchange its notes for the existing national currency of Nicaragua at a rate to be agreed upon by the President and the bankers and officially declared not less than three weeks prior to the agreed-upon date and in no event to be higher than fifteen hundred pesos in national currency notes for one hundred cordobas.

ART. 9. The present currency plan is hereby declared to be the plan referred to in article 8 of the treasury bills agreement of September 1, 1911, between the Republic and Brown Brothers & Company and J. & W. Seligman & Company, as bankers.

In accordance with the provisions of that agreement, the minister of finance is hereby authorized, with the approval of said bankers, to order the United States Mortgage & Trust Company, as trustee, to pay over or set aside either at one time or from time to time, such portion of the moneys now in the hands of said trustee as said minister of finance, with the approval of the bankers, may determine.

The moneys thus paid over or set aside, together with any additional replenishments or increments thereto, shall constitute a fund to be called the exchange fund, which may be hereafter made a part of the reserve held against the notes of the national bank. Said exchange fund shall be available and used for the following purposes:

First. To exchange on demand for the gold coin of Nicaragua and the notes of the National Bank of Nicaragua, in sums of not less than five thousand cordobas or of equivalent value in the money of the United States, at the principal office of said national bank in Nicaragua, and at such branch offices of the bank for the purpose, with the approval of the minister of finance, drafts on the said exchange fund in the United States or other foreign country, charging for the same a premium of one-half of one per cent for demand drafts and one per cent for telegraphic transfers.

Second. To exchange on demand for the currency of the United States or of any other foreign country in which a part of said exchange fund may be deposited, in sums of not less than five thousand cordobas or of equivalent value in such foreign currencies, drafts on the National Bank of Nicaragua or upon such branch offices of the bank as may be designated by said bank for the purpose with the approval of the minister of finance, charging for the same a premium of one-half of one per cent for demand drafts and one per cent for telegraphic transfers.

Third. To interchange the notes of the national bank, the gold or silver coin of the Republic, the currency of the United States and other foreign currencies, under regulations to be made by the national bank, subject to the approval of the minister of finance.

The premiums charge for drafts and telegraphic transfers under this section may be temporarily increased or decreased by the national bank or by the custodians of the

exchange fund under the direction of the national bank and may be different between different points; but they shall in no case be fixed higher than one and one-quarter per cent for demand drafts, nor one and three-quarters per cent for telegraphic transfers, except with the approval of the minister of finance.

The exchanges above provided for may be made provisionally for and with the existing national currency notes of the Republic until such date as may be fixed under section 11 of this act for the termination of the legal-tender quality of such notes and at rates of exchange to be fixed from time to time by the minister of finance, with the approval of the bankers or their representative.

The amounts received as premiums from the sale of drafts or transfers shall be carried to the credit of the fund herein provided for, which shall bear all costs of the issue of such drafts or transfers.

Any drafts against said fund or any orders for payments therefrom, when drawn or signed by the National Bank of Nicaragua (Incorporated), shall be paid out of said fund by the depositary or custodian thereof. Such drafts or orders shall provisionally, until the bank shall be opened for business in Managua, be drawn or signed by the minister of finance, and shall be valid when approved by the bankers or their representative.

All of the drafts or orders hereinbefore referred to shall be sufficient warrant to such depositary or custodian for the payments therein called for.

ART. 10. Neither the Government nor any other person, firm, or corporation, except the national bank, shall, during the term of the charter of said bank, be permitted to issue paper currency or any form of obligation payable to bearer and capable of being used for the purpose of circulation as money.

ART. 11. The gold coin of the Republic and the notes of the national bank shall be receivable for customs and other public dues and shall be legal tender in the payment of debts within the Republic.

The subsidiary silver and the minor coins of the Republic shall be legal tender to an amount not exceeeding ten cordobas.

ART. 12. The importation of foreign coin shall be subject to the control of the Executive exercised by decree.

ART. 13. The circulation of foreign currencies, whether of paper or of gold, silver, or other metals, may be temporarily permitted or temporarily prohibited by Executive decree.

ART. 14. The existing national currency of the Republic shall no longer be receivable for customs or other public dues or be legal tender six months after the official rate of exchange provided for in article 8 of this act comes into operation and the national bank is ready to issue its notes in exchange for said national currency. National currency outstanding after this period—forged or altered notes excepted—may be redeemed under regulations approved by the national bank and Executive.

ART. 15. The Executive may make regulations having the force of law, not inconsistent with this act, which may be necessary and proper to carry out its provisions and those of the treasury bills agreement dated September 1, 1911, and subsequent amendments thereto, and to enable the national bank and the bankers parties to that agreement to carry on any and all the functions therein conferred and to restore and maintain stability in the national monetary system.

ART. 16. The banking law of 1882, approved by the Executive March 6, 1882, excepting only articles 18, 32, 33, and 34 of said law and all other acts inconsistent with any of the provisions of this act, are hereby repealed, and the minister of finance is hereby directed to prepare a revision of the general banking law for submission at the first regular session of the congress.

PANAMA.

1, 2 (*a* and *b*), 4, 8, and 9: None.

* * * * * * *

5. United States gold coin imported during 1912, $80,000.

* * * * * * *

7. Approximate stock of gold and silver coin and bullion in the country on December, 31, 1912:

Classification.	In public treasuries.	In banks.	In circulation.
Gold coin and gold bullion	$25,973.96	$774,000.00	$13,000.00
Silver coin and silver bullion	9,994.68	336,000.00	1,655,000.00
Total	35,968.64	1,110,000.00	1,668,000.00

10. No monetary laws passed in 1912. Bank law of January 31, 1913, inclosed.
11. Cash balance is published every day in the Official Gazette. Report of the Department of Mines (Concessionaries), attached.
12. Imports and exports of gold during 1912:

Country.	Imports of coin.	Exports of bullion.
United States	$80,000	$4,958.93
Great Britain	.....	5,175.30
Total	80,000	10,134.23

12 (*b*). Imports and exports of silver during 1912: None.

SALVADOR.

1, 2 (*a* and *b*), 4, 6, 10, and 11. No.
3 and 5. Insignificant.
7. Approximate stock of silver coin in the country on December 31, 1912:

Classification.	In public treasuries.	In banks.
Silver coin	$209,047.23	$4,771,238.84

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.
Banks of issue	$5,396,217

9. Premium on gold during 1912: Highest, 151 per cent; lowest, 125 per cent; average, 140 per cent.
The actual currency of the country is silver.
12 (*a*). Imports and exports of gold during 1912: There were no imports reported; the exports are as follows:

Country.	Gold exports.					Silver exports.	
	Bullion.		Slimes.	Ore.	Matte.	Bullion.	Auriferous ore.
	Gold.	Gold and silver.					
United States	$1,365,400.19	$1,476,915.95	.....	$18,925.00	$38,398.32	$259.842.50	.....
Great Britain	.....	.....	$56,974.94	4,190.80	.....	73,002.24	$188,457.09
Germany	.....	12,217.50	.....	.....	.....	.....	.....
Total	1,365,400.19	1,489,133.45	56,974.94	23,115.80	38,398.32	332,844.74	188,457.09

NOTE.—All these amounts are expressed in the monetary unit of Salvador of 25 grams weight and 0.900 fineness.

WEST INDIES.

CUBA.

1, 2, (*a* and *b*). None. No mint in Cuba.
3. Gold and silver used in industrial arts: No data available, but in any event the quantity is negligible.
4, 6, 8, 10, and 11. None.
5. United States gold coin imported during 1912, $778,363.

7. Gold and silver coin in the country on December 31, 1912:

Classification.	In circulation (approximate).
Gold coin	$30,000,000
Silver coin	3,000,000
Total	[1] 33,000,000

[1] United States currency is legal tender and constitutes a considerable proportion of the total circulation, but no figures are available.

9. There is no premium on gold. The actual currency of the country is gold (United States, French, and Spanish coin).

12 (*a*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold coin.		Silver coin.	
	Imports.	Exports.	Imports.	Exports.
United States	$778,363	.....	$6,250	.....
Mexico	.....	.....	40	.....
France	1,452,830	.....	.....	.....
Spain	.....	.....	457,542	$890
Total	2,231,193	.....	463,832	890

DOMINICAN REPUBLIC.

1, 2, (*a* and *b*), 10, and 11. None. No mint in the Dominican Republic.

3, 4, 5, 6, and 7. No statistics available.

8. Government notes, unknown amount; worthless and not in circulation.

9. The actual currency of the country is United States currency and Dominican subsidiary coinage.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Imports, coin.	Exports.	
		Coin.	Ore.
United States of America	$377,400	$8,046.92	.....
PORTS.			
Monte Cristo	.....	8,046.92	$165
Puerto Plata	25,000	.....	.....
Sanchez	82,400	.....	.....
Macoris	20,000	.....	.....
Santo Domingo	250,000	.....	.....
Total	377,400	8,046.92	165

NOTE.—The above figures are incomplete and include gold, silver, and paper money—practically all is probably United States paper money. No better figures are available.

HAITI.

1, 2 (*a* and *b*). None. No mint.

3. Gold and silver used in industrial arts during the year 1912: So little as to be negligible.

4, 5, 6; 10 and 11. None.

7. Approximate stock of gold and silver coin in the country on December 31, 1912, $1,500,000 (in circulation). Nickel and bronze, 7,225,000 gourdes.

8. Government notes outstanding at the end of the year 1912, 7,893,772 gourdes (1, 2, and 5 gourdes).

9. Premium on gold during 1912: Highest, 267 per cent; lowest, 205 per cent; average, 228⅞ per cent.

The actual currency of the country is gourdes in paper; fractions in nickel and bronze.

12 (*a* and *b*). Imports and exports of gold and silver during 1912, $300,000 in gold was imported from the United States. It is impossible to estimate the amount exported, as a great quantity has been taken away by the Syrians, who were forced to leave the country during the year.

There was no silver imported or exported.

The following is a copy of the new monetary act of Haiti:

LAW.

MICHEL ORESTE,

President of the Republic.

In view of article 69 of the constitution,
On the report of the Secretary of State for Finance and Commerce,
And the advice of the Council of the Secretaries of State,

HAS PROPOSED

And the legislative body has voted the following law:

ART. 1. On and after January 1, 1914, the national monetary unit shall be the gold gourde, the weight and standard of which shall be identical with the weight and standard of one-fourth of the gold dollar of the United States of America, i. e., 0.418 grams of the standard of nine hundred thousandths of fine gold and one hundred thousandths of copper, with allowance in fineness of two hundred thousandths more or less.

The gourde is divided into a hundred parts or hundredths.

ART. 2. There shall be issued a national silver coin of one goude and one of fifty centimes, which shall be, for the one-gourde coin, of the same weight of the present coin of twenty-five cents of the United States of America, i. e., 6.25 grams of the standard of eight hundred and thirty-five thousandths of fine silver and one hundred and sixty-five thousandths of alloy with an allowance of three thousandths in fineness more or less; and the coin of fifty centimes shall be one-half the weight of the gourde with the same allowance.

ART. 3. The Department of Finance, charged with the execution of the withdrawal, shall present to the legislative body as soon as possible a project of law fixing the amount of the issue of the new money.

The amount of the silver money is fixed at three million gourdes, of which there shall be two million pieces of one gourde and one million pieces of fifty centimes.

The new money shall bear on one side the coat of arms of the Republic with the words in exergue: "Liberté, Egalité, Fraternité. République d'Haiti," and the value of the coin, and on the other side the effigy of J. J. Dessalines with the year of the coinage below.

ART. 4. The silver money shall have the paying power only up to 20 per cent of the amounts to be paid, except by private agreement.

ART. 5. The exportation of the national coin is prohibited.

Any sum of this money that an attempt shall be made to export shall be confiscated. The person discovering and exposing the fraud shall receive one-half of the amount confiscated. The other half shall be turned in to the public treasury.

ART. 6. The silver coins issued in virtue of the law of September 24, 1880, shall cease to have circulation at the expiration of one year from the promulgation of the present law.

During this time they shall be received by the public treasury, the old piece of one gourde for three gourdes of the new silver coins; the piece of fifty centimes for one gourde and a half; those of twenty and ten centimes, respectively, for fifty and twenty-five centimes. The silver coins thus withdrawn shall be demonetized

They shall be melted up, the ingots resulting therefrom sold for the account of the Government, and the proceeds applied to the redemption referred to in article 10 hereafter.

ART. 7. The copper coins issued prior to the present law shall continue to circulate at their present value of one-half, one, two, and three centimes of a gourde. They shall have paying power in exchanges and payments only under the title of fractional money and only up to the amount of five gourdes, unless by private agreement.

ART. 8. Prior to the coinage of the new gold money, dating from the first of January, 1914, the withdrawal of the paper money in circulation by means of American gold shall be proceeded with at the rate of four and a half gourdes for one dollar gold. The five-gourde bills shall be first called in for exchange.

The sum necessary for the withdrawal of the said bills shall be drawn from the ten million francs reserved for the monetary reform by the convention of October 21, 1910.

ART. 9. The balance of the ten million francs, augmented by the interest paid by the Banque Nationale de la République d'Haiti, shall serve to cover the cost and expenses of the coinage of the three million silver gourdes. This sum, in case it is insufficient, shall be completed by an amount drawn from the proceeds of the duties created by the law of August 11, 1903.

ART. 10. Dating from January 1, 1914, there shall be withdrawn from circulation the sum of three million four hundred thousand gourdes in nickel pieces of fifty centimes, one million gourdes in pieces of twenty centimes, and one hundred thousand gourdes in pieces of five centimes. This sum shall be withdrawn by means (1) of the sum of three million silver gourdes, proceeds of the coinage above ordered; (2) of the sum reserved for the withdrawal of the so-called Légitime bills which, up to that time, not having been presented for exchange, shall remain definitely demonetized; (3) of a sum not to exceed two hundred and fifty thousand dollars American gold, which the Government is authorized to borrow and which shall be guaranteed by the proceeds of the duties created by the law of August 11, 1903, deducting the expenses necessitated by the withdrawal and the sum destined to complete, if there be reason, the amount of the coinage of the three million silver gourdes. If necessary the Government may give in guarantee any other affectation available.

There shall also be applied to the redemption of this loan (1) the proceeds of the sale of the ingots resulting from the melting up of the silver money referred to in article 6; (2) the proceeds from the sale of the nickel withdrawn from circulation as is hereafter explained.

At the next legislative session the secretary of finance should render an account of this operation to the chambers.

The above-mentioned sum of five million gourdes shall be withdrawn at the rate of five gourdes nickel for one dollar or four new silver gourdes.

ART. 11. The balance of the nickel money shall continue to circulate and shall be received in exchange and payments only up to the amount of ten gourdes, unless by private agreement, and at the rate of four gourdes for a dollar.

ART. 12. The coinage and withdrawal operations shall be done under the supervision of the Banque Nationale de la République d'Haiti under conditions which shall be agreed on between the Department of Finance and that establishment.

The conditions bear particularly on the reserve for expense of coining the same as in effect at the mint at Paris and on the commission granted to the bank for coinage.

ART. 13. The withdrawal shall be done under the control of a central commission presided over by the Secretary of State for Finance and composed of one member of the Chamber of Accounts, the Administrator-in-Chief of Finance at Port au Prince, the commissary of the Government at the bank, and three citizens appointed by the Department of Finance.

These latter shall receive as payment for services, to be paid once for all, the sum of ten thousand gourdes to be divided among them.

ART. 14. The bills from circulation shall be cancelled, perforated under the supervision of the bank, then, at the diligence of the above-named commission of control, burned after verification.

The nickel shall, after being controlled under the supervision of the bank, be shipped to a foreign country, melted, and the metal resulting therefrom sold for the account of the Government.

ART. 15. A maximum delay of eighteen months is fixed for the presentation for exchange of the bills in circulation and the nickel to be withdrawn. After that delay all types of paper money issued prior to the present law shall be demonetized. It shall be the same with the types of nickel money the withdrawal of which is provided for in the present law.

ART. 16. The withdrawal effected, the loan provided for in article 10 reimbursed, the proceeds of the duties created by the law of August 11, 1903, shall form a metallic reserve which is prohibited from being touched under penalties imposed by the said law.

This metallic reserve shall be set aside to guarantee the two millions in nickel still in circulation and to assure the stability of exchange.

ART. 17. Engagements contracted in national money prior to the present law shall be settled at the rate of the withdrawal, i. e., at the rate of five gourdes for one dollar, or four gourdes of the new money.

ART. 18. A public administration regulation shall determine the details of the execution of the present law.

ART. 19. The present law abrogates all laws or provisions of law that are contrary thereto and shall be executed at the diligence of the Secretary of State for Finance.

Passed by the House of Representatives August 20, 1913, 110th year of the Independence.

Passed by the Senate August 26, 1913, 110th year of the Independence.

Signed by the President September 5, 1913, 110th year of the Independence.

SOUTH AMERICA.

ARGENTINA.

1, 2 (*a* and *b*), 4, and 10. None.

* * * * * * *

5. United States gold coin imported during 1912, $8,540,000. None melted at mint.

* * * * * * *

7. Approximate stock of gold coin in the country on December 31, 1912:

Classification.	In public treasuries (cash conversion office).	In banks.
	Pesos.	*Pesos.*
Gold coin	222,875,530.66	68,788,855.00

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Gold holdings.
Government	$786,119,171	$252,875,530.66
Banks of issue	250,000	250,000.00
Total	786,369,171	253,125,530.66

9. Premium on gold during 1912: Law No. 3871, of September 20, 1897, fixes the value of the paper dollar at $0.44 gold and the gold dollar at $2.2727 paper.

11. Reports of the Argentine Mint and Department of Mines for 1911 are sent under separate cover. Reports for 1912 will be sent as soon as they are published.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold.		Silver.	
	Imports of coin.	Exports of coin.	Imports of coin.	Exports of coin.
	Pesos.[1]	*Pesos.*[1]	*Pesos.*[1]	*Pesos.*[1]
Germany	11,779,698			
Brazil	869,500			
Bolivia	3,278			
Spain		138,000		
United States	8,540,000			
France	870,500			
Italy	40,000			
United Kingdom	7,484,901			440,000
Uruguay	6,489,930	7,621		
Total	36,077,807	145,621		440,000

[1] Argentine gold.

BOLIVIA.

1, 2 (*a* and *b*), 4, 7, 8, 10, and 11. None.

3 and 5. Unknown.

* * * * * * *

9. Premium on gold during 1912: Average premium 2.70 bolivianos for one gold dollar.

12 (*a*). During the year 1912 gold bullion was exported to the value of 144,275 bolivianos.

12 (*b*). During the year 1912 silver ore was exported to the value of 4,308,329 bolivianos.

STAMPED PAPER IN BOLIVIA.

[From Bulletin of the Pan American Union, Mar., 1913.]

The 16 classes of stamped paper for use in Bolivia are of the following denominations: First class, 5 centavos; second, 10 centavos; third, 20 centavos; fourth, 30 centavos; fifth, 40 centavos; sixth, 70 centavos; seventh, 80 centavos; eighth, 1 boliviano; ninth, 2 bolivianos; tenth, 5 bolivianos; eleventh, 10 bolivianos; twelfth, 20 bolivianos; thirteenth, 25 bolivianos; fourteenth, 40 bolivianos; fifteenth, 50 bolivianos; and sixteenth, 100 bolivianos.

BRAZIL.

1. Amount of gold and silver coined in 1912:

Denomination.	Pieces.	Value.
GOLD.		*Reis.*
20 milreis	4,878	97,560
SILVER.		
2 milreis	741,000	1,482,000
1 milreis	1,570,000	1,570,000
500 reis	222,000	111,000
Total silver	2,533,000	3,163,000
Total coinage	2,537,878	3,260,560

No recoinage was executed, either domestic or foreign.

2 (*a* and *b*), and 4. None.

3. There are no statistics to be had as to the amount of gold and silver used in the industrial arts, and expert opinion solicited by the embassy on this point appears to agree that the quantity is so small, in any case, as to be practically negligible.

5. The total import of United States gold coin during the calendar year 1912 was $1,855.47. None was deposited at the mint.

* * * * * * *

7. There are no figures obtainable as to the stock of gold and silver coin and bullion in the banks. The quantity of gold in circulation is almost negligible, and no statistics are obtainable as to the amount of silver in circulation. The gold coin deposits in the "Caixa de Conversao" ("cash conversion office") on December 31, 1912, were as follows:

Pounds sterling	16,616,346
France	61,544,290
Brazilian gold reis	235,370
Marks	22,145,350
Dollars	27,051,770
Austrian crowns	8,660
Italian lire	750
Argentine pesos	130,260
Spanish pesetas	723,550
Making a total in pounds of	25,780,402=$125,460,326

No statistics exist as to silver deposits, as they are very small and vary constantly.

8. There are no bank notes in Brazil. The amount of Government convertible gold notes in circulation on December 31, 1912, was 392,956.3175 reis which is covered by the sum mentioned in the answer to question 7 (235,370 reis). In the course of the year this amount is apt to vary a few hundred milreis according to the amount of subsidiary coins which happen to be on deposit at the "Caixa de Conversao." The amount of inconvertible currency outstanding on December 31 last amounted to 607,025.525 reis.

9. Gold is at a premium with the actual currency of the country, which is composed of convertible and inconvertible notes and silver coin—both notes having the same purchasing power in the country. The gold coined at the mint, as mentioned above, is in a large measure for medals and entirely at the request of individuals. The coinage of gold is free. The premium on gold varies with exchange, the par of the milreis being 27 pence. For 1912 the fluctuations were as follows: Highest premium, 70.58=16-53/64 d.; lowest premium, 67.28=16-9/64 d.; average, 68.75=16 d. for sight drafts on London.

10. A translation of the only law passed during the year 1912 affecting either coinage, currency, or banking, is appended herewith.

11. No.

12 (*a*). The imports and exports of gold during the calendar year 1912 was as follows, the value of coin, bullion, and ore being given separately and by countries, in pounds:

Country.	Imports.			Exports.		
	Coin.	Bullion.	Ore.	Coin.	Bullion.	Ore.
Germany	£5,000	.....	.....	.....	£576	.....
Argentina	12,144	.....	.....	£1,350,562	.....	.....
Chile	.....	.....	.....	5,000	.....	.....
United States	381	£31	.....	.....	.....	.....
United Kingdom	4,955,342	.....	.....	175	435,394	£140
Portugal	6,250	.....	.....	.....	.....	.....
Uruguay	8,312	.....	.....	80,000	.....	.....
France	.....	.....	.....	1,755	.....	.....
Dakar	.....	.....	.....	1,189	.....	.....
Total	4,987,429	31	.....	1,438,681	435,970	140

12 (*b*). The imports and exports of silver during the calendar year 1912 were as follows, the value of coin, bullion, and ore being given separately and by countries, in terms of pounds:

Country.	Imports.		Exports.	
	Coin.	Bullion.	Coin.	Bullion.
France	.....	£42,776	£27	.....
United Kingdom	.....	42,869	426	£3,048
Portugal	£330	.....	.....	.....
Germany	.....	1,982	.....	.....
Austria-Hungary	.....	36	.....	.....
United States	.....	106,403	.....	.....
Total	330	194,066	453	3,048

13. No change has been made in Brazilian coinage since last year.

CHILE.

Commerce of Chile in 1911 and 1912.

Consul Alfred A. Winslow, Valparaiso.

[In Daily Consular and Trade Reports for June, 1913.]

Declared exports from the Valparaiso consular district to the United States, as invoiced through this consulate, were as follows in 1911 and 1912:

Classification.	1911	1912
Gold in copper	$16,260	$39,859
Silver in copper	23,313	36,509

COLOMBIA.

1 and 2 (*a*). None.

2 (*b*). Coinage of silver executed by the mint at Birmingham, England, for Colombia during 1912:

Denomination.	Pieces.	Value.
10 cents	2,442,000	$244,200
20 cents	400,000	80,000
50 cents	1,010,000	505,000
Total	3,852,000	829,200

3, 4, 5, 6, 10, and 12 (*a* and *b*). No information available.

7. Approximate stock of silver coin and bullion in the country on December 31, 1912:

Classification.	In circulation.
Silver coin (at the fineness of 0.900)	$1,500,000
Silver bullion (at the fineness of 0.666 and 0.835)	[1] 600,000
Total	2,100,000

[1] Gold equivalent.

8. Notes outstanding at the end of 1912:

Item.	Notes outstanding.
Government (legal tender), gold equivalent	$10,620,803.42

9. Premium on gold during 1912: Highest, 1.5 per cent; lowest, 0.5 per cent; average, 1 per cent.

11. There is no report published on the operations of the mint, in particular, but attached hereto are transmitted copies of the reports of the Amortization Commission to Congress in 1910, 1911, and 1912.

ECUADOR.

1 and 2 (*a*). There are no mints in Ecuador. All money for the Government is coined abroad.

2 (*b*). Silver coinage executed at Lima, Peru:

Item.	Pieces.	Sucres.
20-cent	50,000	10,000
10-cent	30,000	3,000
5-cent	20,000	1,000
Total	100,000	14,000

3. Gold and silver used in industrial arts: Practically none. Everything is imported from either Europe or the United States.

4. No statistics or estimates available. Probably none.

5. Gold exported exceeded gold imported by 1,247,000 sucres; all English gold.

* * * * * * *

7. Approximate stock of gold and silver coin in the country on December 31, 1912:

	Sucres.
3 banks report:	
Gold coin	4,735,346.00
Silver coin	157,433.78

(There are only three incorporated banks in the country).

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Sucres.	*Sucres.*	*Sucres.*
Banks of issue	9,710,219.60	4,735,346.00	157,433.78

9, 10, and 11. None.

12 (*a* and *b*). No data available either from treasury or customhouse.

COMMERCE OF ECUADOR.

[From Bulletin of the Pan American Union, January, 1913.]

According to Consul General Dietrich, the exports of gold for 1911 were as follows:

Gold ore	$225,750
Gold bullion and dust	37,321
Coined money	645

Gold bars, dust, etc., all to the United States, except 5,852 sucres to Germany; gold ore, all to the United States, except 20 sucres to France.

Exports of gold for the years 1908, 1909, and 1910 were as follows:

Year.	Gold bars, dust, etc.	Gold ore.
	Sucres.	*Sucres.*
1908	401,368	358,594
1909	286,993	261,743
1910	234,880	276,781

BRITISH GUIANA.

1, 2 (*a* and *b*), and 11. There is no mint operated in this colony.

4, 5, 7, 8, 9, and 10. None. No data available.

* * * * * *

12 (*a*). Imports and exports of gold and silver during the year 1911–12:

Classification.	Country.	Imports.	Exports.
Gold bullion	England		$915,516.68
Silver coin		$229,401.60	317,095.97

DUTCH GUIANA.

1, 2 (*a* and *b*), 3, 4, 5, 10, and 11. There is no mint and no statistics are kept of data pertaining to these questions.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Classification.	In banks.
Gold coin	$89,449
Gold bullion	4,241
Silver coin	148,784
Silver bullion	103
Total	242,577

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Gold holdings.
Banks of issue	$476,660	[1] $317,773

[1] Not covered by gold coin, bullion, etc.

9. Premium on gold during 1912: 2 per cent. The actual currency of the country is bank notes issued by the Surinam Bank. This country does not have any currency of its own, using the coinage of the Netherlands, consisting of—

Gold, 10 guilders, equal to	$4.00
Gold, 5 guilders, equal to	2.00
Silver, 2½ guilders, equal to	1.00
Silver, 1 guilder, equal to	.40
Silver, ½-guilder, equal to	.20
Silver, ¼-guilder, equal to	.10
Silver, $\frac{1}{10}$-guilder, equal to	.04
Nickel, $\frac{1}{20}$-guilder, equal to	.02
Copper, 2½ cents, equal to	.01
Copper, 1 cent, equal to	.004
Copper, ½-cent, equal to	.0002

12 (*a*). Imports and exports of gold during the calendar year 1912:

PARAGUAY.

1, 2 (*a* and *b*), 4, 5, 11, and 12. No.
3. No sources of information on the subject.
6. There is no mining in Paraguay.
7 and 8. There are no records or other sources of information on the subject.
9. There is no Paraguayan gold money.
10. The emission of paper money was increased from 32,500,000 to 65,000,000 pesos January 12, 1912.

PERU.

COINAGE OF GOLD.[1]

The greater portion of the gold employed in the manufacture of Peruvian pounds proceeds from native mining industry. The coinage is gratuitous as the expenses are paid by the State.

By this method, for industrial benefit, it is much more profitable to coin it than to send it abroad, especially when it is taken into account that the exportation is encumbered with a prohibitive duty.

Thus, it will be seen that of 509,128 kilograms which were received for coinage in 1911, 384,276 kilograms, or more than 75 per cent, proceeded from native mining industry.

[1] The figures given are taken from the publication of statistics by the national mint.

For that reason the data upon gold coinage is of much interest, as it is directly connected with the production of gold in the country.

The following table gives the amount of Peruvian gold coined in the national mint from April 16, 1898 (the date on which the first coinage of "Peruvian pounds" was delivered), up to December 31, 1911:

	Peruvian pounds.		Peruvian pounds.
1898	40,073 0	1906	221,037 0
1899	33,813 0	1907	204,612 7
1900	63,497 0	1908	144,664 0
1901	81,219 0	1909	52,580 0
1902	92,302 0	1910	52,859 0
1903	111,600 5	1911	54,734 8
1904	86,246 5		
1905	181,982 5	Total	1,421,221 0

NOTE.—The above coinage was distributed as follows:

Pounds	Peruvian pounds	48,845
Half-pounds	do	289,585
Fifth-pounds	do	1,082,791
Total	do	1,421,221

NOTE.—The legal unit of money in Peru is the pound, which is of identical value with the pound sterling of Great Britain, which is divided into 10 soles and each sole into 100 centavos. The system adopted gives the following method of written expression: "Lp. 1,825 8 50," meaning 1,825 pounds, 8 soles, and 50 centavos. The system provides that ciphers must be used in the absence of any of the three denominations, as "Lp. 0 8 50" or "Lp. 1,825 0 50," and that a point and dash indicate the absence of both soles and centavos, as "Lp. 1,825. —." Commas are to be used only to point off integral thousands.

COMMERCE OF PERU, 1909 and 1910.

[From Bulletin of the Pan American Union, January, 1913.]

The following table shows the exports of gold and silver for the years 1909 and 1910:

Classification.	1909	1910
Silver and copper bars		£635,852 3 31
Copper and silver bars		600,841 6 28
Copper and silver matte	£164,761 9 76	130,915 3 90
Copper and silver ore		123,698 1 30
Silver sulphide	73,401 2 81	92,083 1 68
Silver and lead ore	13,647 5 41	37,516 7 47
Silver bars	47,516 0 26	32,148 1 26
Silver ore	50,390 1 28	24,477 7 35
Copper, lead, and silver matte		5,591 3 73
Silver and copper sulphide	1,703 6 82	3,311 2 96
Gold, silver, and copper ore	482 5 14	2,051 6 04
Silver and copper ore	60,769 4 01	

Exports, by countries, in 1910, were as follows:

	Libras.[1]				Libras.		
Silver and copper bars to—				Silver and lead ore to—			
United States	635,678	7	16	Germany	7,430	8	46
United Kingdom	173	6	15	Belgium	16,661	9	28
Copper and silver bars to United States	600,841	6	28	United Kingdom	13,421	6	48
Copper and silver matte to—				Silver bars to—			
United States	15,468	4	03	Germany	224	6	63
United Kingdom	114,741	9	57	United Kingdom	31,923	4	63
Germany	705	0	30	Silver ore to—			
Copper and silver ore to—				Germany	1,110	2	54
Germany	3,013	9	70	United States	5,278	5	07
Belgium	1,326	3	30	United Kingdom	18,088	9	74
United States	39,671	4	80	Copper, lead, and silver matte to United Kingdom	5,591	3	73
France	43	7	02	Silver and copper sulphide to—			
United Kingdom	79,642	6	38	Germany	1,040	3	82
Silver sulphide to—				United Kingdom	2,270	9	14
Germany	33,267	7	51	Gold, silver, and copper ore to—			
United States	6,541	0	41	Germany	601	0	97
United Kingdom	52,274	3	76	United States	60	8	20

[1] The value of the "libra" (Peruvian pound) is estimated, the same as the British pound sterling, at $4.8665 United States gold.

URUGUAY.

1, 2 (*a* and *b*), 4, 9, 11. No.

3. Practically no factories nor establishments in Uruguay where any appreciable amount of gold was used.

5. No statistics available, except very indirectly, as to the amount of gold imported from the United States, as at present transportation companies are not required to keep data on importation and exportation of precious metals.

* * * * * * *

7. Stock of gold coin in the Republic on June 30, 1912:

Classification.	In Montevideo.	In interior.	Total.
General recapitulation:			
Bank of the Republic	$13,116,460.52	$1,803,925.55	$14,920,386.07
Other credit institutions	5,644,624.01		5,644,624.01
State tax gathering offices	3,729.05	19,271.34	23,000.39
Commercial houses, etc	89,190.77	303,968.28	393,159.05
Total	18,854,004.35	2,127,165.17	20,981,169.52

Classification of coins.

Description.	Pieces.	Value.
20 soles (Peru), $18.66	200	$3,732.00
20 milreis (Brazil), $10.56	76,879½	811,844.88
Eagles (United States), $9.66	63,829¾	616,595.31
Isabelinas (Spain, 5 pesos), $4.82	522	2,516.04
Pounds sterling (England), $4.70	4,037,094½	18,974,344.15
Argentines (Argentina), $4.66	51,237	238,764.42
Alphonsinas (Spain, 5 pesos), $4.66	16,654	77,607.64
20 marks (Germany), $4.60	6,417	29,518.20
20 francs, liras, etc. ($3.73)	60,656	226,246.88
Total		20,981,169.52

NOTE.—The Uruguayan peso is worth $1.034 United States currency.

8. The only paper money issued in Uruguay is that issued by the Bank of the Republic. All other banks of issue have been terminated.

	Pesos.
Notes outstanding December 31, 1912	27,999,292.50
Gold holdings	13,655,688.10
Silver holdings	1,704,734.80
Nickel holdings	111,639.51

Statement of the banks on December 31, 1912:

Cash on hand:	
In gold	$17,526,493.49
In bills and silver	4,870,966.05
Bills in circulation:	
Of $10 and over	23,593,120.00
Of less than $10	4,406,172.50
Total	27,999,292.50

10. Copy of law and decree regarding rural credit, also pamphlet explaining rural banks is inclosed herewith.

12 (*a*). Importations of gold from September 1, 1911, to August 31, 1912 (Ernesto Tornquist & Co. (Ltd.), Buenos Aires):

Louis Dreyfus & Co	£1,965,000	Banco Británico de la America del Sud.	£50,000
Banco Anglo Sud-Americano	1,765,000	Banco Francés del Rio de la Plata	50,000

Decree relative to importation and exportation of gold coin.

[Translation.]

Gen. J. V. GOMEZ, *President of the United States of Venezuela.*

Whereas gold coin as a legal medium of exchange is necessary for the development of industries and the facilitation of business transactions;

And whereas every tax which bears upon the importation of gold coin restricts its coming and tends to diminish the industrial activity of the nation;

And whereas it is the duty of the National Government to promote the introduction and circulation throughout the territory of the Republic of gold money legally coined: It is decreed—

ARTICLE 1ST. The tax of four centimos per hundred bolivars which is levied for assay upon imported gold coin, is abolished from and after this date.

ARTICLE 2ND. Gold coin brought in through the customhouses of the Republic will be examined, free of charge, by the administrator, together with the comptroller and the warehouse weigher or warehouse inspector, by weight; the charge for expert assayer being abolished. The Ministry of Finance and Public Credit will furnish to the customhouses of the Republic the instruments and apparatus necessary for the examination of gold coin, with the use of which apparatus the comptroller and warehouse inspector shall be familiar.

ARTICLE 3RD. The special permits referred to in paragraph 2nd of Article 54th of the 12th law of the Code of Finance, and the consular invoices for importation of gold coin in legal money will be certified by consuls of the Republic free of charge. Such invoices shall only include the gold money which is to be imported.

ARTICLE 4TH. Upon the manifest which must be presented at the customhouse upon importation of gold coin there shall only be canceled instruction stamps to the value of fifty centimos for each thousand bolivars.

ARTICLE 5TH. Gold coin shall circulate freely through the territory of the Republic, and the necessary policies or transportation permits shall be engrossed on national stamped paper of the 6th class without cancellation of stamps.

ARTICLE 6TH. The exports of gold coin from the territory of the Republic shall be made upon orders or shipping permits, on which shall be canceled instruction stamps of the value of thirty bolivars for each thousand bolivars.

ARTICLE 7TH. Persons disobeying the foregoing provision will be penalized with a fine equal to twenty-five per cent of the value of the money sought to be exported without complying with said requirements, in addition to the penalties imposed by the law of stamps of instruction for infractions thereof.

ARTICLE 8TH. The fine imposed by the foregoing article shall be made effective by the administrator of customs of the appropriate jurisdiction.

ARTICLE 9TH. The Minister of Finance and Public Credit will be responsible for the execution of this decree.

Given, signed, sealed with the seal of the federal Executive, and attested by the Minister of Finance and Public Credit, in the federal palace in Caracas, this 18th day of November, in the year 1912, 103rd year of the independence, and 54th of the federation.

J. V. GOMEZ.

Attested:

M. PORRAS E.,
Minister of Finance and Public Credit.

EUROPE.

AUSTRIA-HUNGARY.

AUSTRIA.

1. Amount of gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
GOLD.		
Coins of the crown standard:		*Crowns.*
100 crowns	3,591	359,100.00
20 crowns	4,460	89,200.00
10 crowns	85,220	852,200.00
Total	93,271	1,300,500.00
Commercial trade coins:		
4 ducats (45.16 crowns)	142,825	6,449,977.00
1 ducat (11.29 crowns)	464,324	5,242,217.96
Total	607,149	11,692,194.96
Total gold coinage	700,420	[1] 12,992,694.96
SILVER.		
Coins of the crown standard:		
2 crowns	[2] 10,244,500	20,489,000.00
1 crown	[2] 8,457,000	8,457,000.00
Total	18,701,500	[3] 28,946,000.00
Maria-Theresa thalers	4,082,200	[4]

[1] Of which amount 12,620 crowns were recoined from domestic gold coins consisting of 227 twenty-crown and 808 ten-crown pieces.
[2] Material was obtained from the melting down of silver gulden.
[3] Of this total, 50,335 crowns were from the recoinage of domestic silver coins, which sum represents their full nominal value. The value of the silver coinage does not include Maria-Theresa thalers.
[4] Trade coins without fixed value.

2 (*a*). Coinage executed for other Governments during 1912:

BULGARIA.

Denomination.	Value.
Gold (new coinage):	*Leva.*[1]
100 leva	500,800
20 leva	750,200
Total	1,251,000

[1] The leva is of the same value as the French franc.

MONTENEGRO.

Denomination.	Value.
Silver (new coinage):	*Perpers.*[1]
5 perper	50,000
1 perper	150,000
Total	200,000
Silver (recoinage):	
5 perper	150,010
1 perper	350,008
Total	500,018

[1] 1 perper=1 crown.

2. (*a*). None.

* * * * * * *

4. Gold and silver returned from use in industrial arts, deposited in the mint for coinage:

Description.	Gold.	Silver.
	Kilograms.	*Kilograms.*
Scrap gold and waste from gold and silver industries	925.3183	5,509.892

5. The amount of United States gold coin imported is unknown. The amount to be found in the metal stock of the Austria-Hungarian Bank in the year 1912 was of the value of about 2,488,120 crowns; United States gold coin melted at mints during 1912, 6,810 eagles.

* * * * * * *

7. Approximate stock of gold and silver in the country on December 31, 1912 (for Austria and Hungary):

Classification.	In public treasuries.[1]	In banks.[2]	In circulation.[3]
	Crowns.	*Crowns.*	*Crowns.*
Gold coin	1,347,438	1,067,278,700	[4] 235,000,000
Gold bullion		142,557,930	
Silver coin	4,155,872	229,591,382	380,000,000
Total	5,503,310	1,439,428,012	615,000,000

[1] In the Imperial Treasury and pay offices.
[2] In the Austria-Hungarian Bank (head and branches in Austria, Hungary, Bosnia, and the Herzegovina).
[3] In circulation in Austria-Hungary and in their Imperial States treasuries.
[4] Difference between the amount in the Austria-Hungarian Bank to cover their lawful note circulation and the back flowing national gold coins.

8. Bank notes outstanding at the end of the year 1912 (for Austria and Hungary):

Item.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Crowns.	*Crowns.*	*Crowns.*
Austria-Hungarian Bank	2,815,797,400	1,209,836,630	229,591,382

The metallic stock of the Austria-Hungarian Bank at the end of 1912 was as follows:

	Crowns.
Gold stock	1,209,836,630
In the metallic stock of 1912 there are to be reckoned (in accordance with article 84 of bank statutes measure governing the rise in gold exchange values)	60,000,000
Silver coins	229,591,382
Nickel and bronze coins	8,147,371
Total	1,507,575,383

The metallic stock comprised 53.5 per cent of the covered bank notes in circulation. The circulation of bank notes in excess of 1,308,222,016 crowns were, for the most part, covered by banks (in accordance with the bank measure governing exchange discount).

9. There is no premium on gold. The exchange value of sight drafts on London, Berlin, and Paris at the Vienna Bourse in 1912 was as follows:

Items.	Average.	Maximum.	Minimum.	Parity.
	Crowns.	*Crowns.*	*Crowns.*	*Crowns.*
Berlin (for 100 reichsmarks)	117.841	118.350	117.450	117.563
London (for £1 sterling)	24.129	24.223	24.060	24.017
Paris (for 100 francs)	95.592	96.025	95.250	95.226

10. Monetary laws passed during the year 1912:

Decree of the finance ministry, December 11, 1912, regarding the issue of bank notes for 100 crowns, from the date of January 2, 1912, by the Austria-Hungarian Bank (Reichsgesetzblatt, No. 222).

Law of March 7, 1912, concerning the sanctioning of the Royal Hungarian crown; the coinage of 2-crown pieces and the further coinage of 1-crown pieces. (The 2-crown pieces shall have the weight of 10 grams and the fineness of 0.835.) (Reichsgesetzblatt, No. 54.)

Ordinance of the finance ministry regarding the issue of 2-crown pieces of the crown standard. (Reichsgesetzblatt, No. 91.)

[1] According to Customs Department returns for both States of the Austria-Hungarian Monarchy.

HUNGARY.

1. Gold and silver coined during the calendar year 1912:

GOLD.

Denomination.	Pieces.	Value.
		Crowns.
20 crowns	210,890	4,217,800
10 crowns	741,072	7,410,720
Total	951,962	11,628,520

Of the above total, 11,603,650 crowns were new coinage, and 24,870 crowns were from the recoinage of domestic coins.

SILVER.

5 crowns	269	1,345
2 crowns	4,000,268	8,000,536
1 crown	4,004,094	4,004,094
Total	8,004,631	12,005,975

Of the above total, 12,000,000 crowns were new coinage, and 5,975 crowns were from the recoinage of domestic coins.

2 (*a* and *b*). In the year 1912 there were coined for Bulgaria 37,505 gold coins of 20 leva (francs), valued at 750,100 leva.

No coinage was executed by other Governments for Hungary during the year 1912.

* * * * * * *

4. During the year 1912 there were returned from use in industrial arts and deposited at the mint for coinage, 104.40697 kilograms of gold and 111.526 kilograms of silver, in old gold and silver and scrap gold and sweepings.

5. No United States gold coin was imported, or deposited at the mint for coinage, during 1912.

* * * * * * *

7. At the end of the year 1912 there was in the State Treasury:

	Crowns.
Gold coin	2,643,923.79
	Kilograms.
Gold bullion	2,383.29699
Silver bullion	17,857.24330

There was in circulation during the same period: 133,969,230 crowns.

The metallic stock in the Austria-Hungarian Bank at the end of the year 1912 was as follows:

	Crowns.
Gold	1,209,800,000
Silver and mixed (change) coins	237,800,000

The gold and silver in the bank serves, by law, to cover the bank notes in circulation.

8. There are no State (government) notes. The bank notes in circulation in both States of the Monarchy belong to the Austria-Hungarian Bank. At the end of the year 1912 the bank notes in circulation were 2,815,800,000 crowns.

In the vaults of the Austria-Hungarian Bank at the end of the year 1912 there existed:

	Crowns.
In gold coin and bullion	1,209,800,000
In notes payable in gold	60,000,000
In silver and mixed (change) coins	237,800,000
Total	1,507,600,000

After deducting this amount from the bank notes in circulation there remains 1,308,200,000 crowns which were not covered by coin and bullion.

The obligation of the Austria-Hungarian Bank to redeem bank notes issued by it, in legal coin, is still temporarily suspended; the bank, however, in the year 1912, redeemed its notes in lawful coin.

9. Gold has an exchange value according to the average current rates at Berlin, London, and Paris. At the end of January to February gold was at a premium of 1 per cent. From February to March it had an almost continuous upward tendency to 4 per cent. Then, at the beginning of April it fell to 3 per cent, where it remained, except for a short time, until the end of June when it went up to 5 per cent, which was the culmination point of the first six months of the year, and at the beginning of August it fell to 2 per cent, after which it had an uninterrupted upward tendency until December, when it went up to 8 per cent, the highest point of the entire year. At the year's conclusion it again fell to 5 per cent.

The currency system of the country is the crown standard, which is valued in gold.

10. The following monetary laws were passed in 1912: Law Brief XX, of March 7, 1912, which determined that, besides the silver coins of 1-crown and of 5-crown, there shall be provided silver coins of 2-crown with the standard of 835/1000 silver and 165/1000 copper alloy. There will be a correspondence of one hundred 2-crown pieces to 1 kilogram of silver; consequently the weight of the pieces will be 10 grams each. The lawful provisions relative to the 1-crown pieces are equally applicable to those of 2-crown. Of the 50,000,000 crowns to be coined in 2-crown pieces in the two territories of the Empire, 35,000,000 crowns for the Kingdom and country represented by the council of the Empire and 15,000,000 crowns for the country of the sanctioned crown of Hungary. The period on which the issue of the 2-crown pieces will begin will be fixed by the two finance ministries signified by an ordinance.

In view of the coinage of the aforesaid contingents of 2-crown pieces there will be previously set apart at the Austria-Hungarian Bank by the two finance ministries a total amount of 50,000,000 crowns in silver guldens (florins) against the payment of the countervalue in lawful coins and by reason of the 35,000,000 crowns authorized for the imperial royal finance ministry and the 15,000,000 crowns authorized for the royal finance ministry of Hungary.

Besides the 200,000,000 crowns already coined in 1-crown pieces there shall be subsequently coined 100,000,000 crowns in those pieces in the two territories of the monarchy at the ratio of 70,000,000 crowns in the Kingdom and country represented by the council of the Empire and 30,000,000 crowns in the country of the sanctioned crown of Hungary.

In view of the coinage of the aforesaid contingents in 1-crown pieces there will be previously set apart at the Austria-Hungarian Bank by the two finance ministries a total amount of 100,000,000 crowns in silver guldens (florins) against the payment of the countervalue in lawful coins, by reason of the amount of 70,000,000 crowns authorized for the imperial royal finance Ministry and the 30,000,000 crowns authorized for the royal ministry of Hungary.

ORDINANCE OF THE FINANCE MINISTRY RELATIVE TO THE ISSUE OF 2-CROWN PIECES OF THE CROWN SYSTEM, MAY 14, 1912.

Conformable to a convention arranged with the royal finance ministry of Hungary, the issue of 2-crown pieces of the crown system shall begin March 20, 1912, for the requirements of the imperial and royal administration of finances and the royal administration of finances of Hungary.

The 2-crown pieces of Austrian and Hungarian coinage must be accepted at their nominal value for all payments which are to be made in national coins, by application of the law of March 7, 1912. In the transactions between individuals, however, no one in the two territories of the monarchy is obliged to receive in payments more than 50 crowns in 2-crown pieces; to the contrary, the pay offices of the State and all official pay offices must accept these pieces in payments without limitation of amount.

The 2-crown pieces shall be accepted for any amount by the central treasury at Vienna as well as by the pay offices of the branches of the Austria-Hungarian Bank in exchange for all lawful coins.

The issue of 2-crown pieces will be proceeded with by the requirements of the central treasury and the pay offices of the branches of the Austria-Hungarian Bank to a pro rata of their reserves.

11. Reports on the operations of the mint and department of mines are not yet published. The Austria-Hungarian finance ministry will not neglect to forward them to the Director of the United States Mint when they are available.

12 (*a* and *b*). The details of gold and silver imports and exports for 1912 in a special report of the royal Hungarian statistical central board are forwarded herewith, as follows:

BELGIUM.

1. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
		Francs.
2 francs	750,000	1,500,000
1 franc	6,500,000	6,500,000
50 centimes	2,000,000	1,000,000
Total	9,250,000	9,000,000

Value of pieces remelted:	Francs.
In 5-francs Belgian pieces	8,298,135
In 5-francs pieces of Congo Free State (old)	30,845
In 2-francs pieces of Congo Free State (old)	23,418
In 1-franc pieces of Congo Free State (old)	20,153
In 50-centimes pieces of Congo Free State (old)	11,689
Total	8,384,240

2 (*a*). Coinage executed for other Governments during 1912:

FOR ROUMANIA.

Denomination.	Fineness.	Value.
Silver coins:		Lei.
2 lei	0.835	3,000,000
1 lei	.835	3,540,000
50 bani	.835	900,000
Total		7,440,000

The metal was obtained partly by the melting of bullion, and partly by the remelting of old coins, as follows:

	Lei.
In 5-lei pieces	12,000
In 2-lei pieces	1,418,000
In 1-lei pieces	910,000
In 50-bani pieces	100,000
Total	2,440,000

2 (*b*), 4, 5, and 10. None.

* * * * * * *

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Classification.	In national bank.	In other banks and circulation.
Gold coin:	*Francs.*	*Francs.*
10-franc and 20-franc pieces	215,000,000	[1] 100,000,000
Silver coin:		
5-franc pieces	54,000,000	100,000,000 (approximately)
2-franc pieces	16,000,000	50,000,000 (approximately)
1-franc pieces		
50-centime pieces		
Gold and silver bars [2]		

[1] Mr. Raphael Georges Lévy, of Paris, states this amount.

[2] The amount of gold and silver bars is not great and figures thereof are not obtainable. Generally speaking, the volume of specie in Belgium has been diminishing during the last 20 years on account of the foreign exchange, especially with France, being always against Belgium; for this reason gold and silver have a constant tendency to flow outward and to return to France, wherefrom silver pieces are being exported to Belgium at a very heavy expense for the latter country.

NOTE.—From Mr. A. E. Janssen, professor of monetary questions in the School of Political Science at Louvain, Belgium, who is closely connected with the administration of the national bank of Belgium and who has been appointed by the Belgian Government as secretary general of the commission for the study of currency reforms, I have obtained the following comments regarding the figures given above:

(1) The Government has no metallic reserve with the exception of the small amounts used in its current operations. The Government reserve is in the form of foreign bills of exchange, payable by agreement in gold at sight, and the balance to the credit of the Government in account current with the national bank.

(2) To this figure of 215,000,000 francs, Prof. Janssen believes that there should be added a sum of 153,000,000 francs, the amount of bills of exchange and assets in gold (disponsibilités) abroad, payable by agreement in gold at sight, and included in the metallic reserve in the calculation of the legal reserve. Thus, in his opinion, the gold reserve of the bank on December 31, 1912, was 368,000,000 francs, to which should be added 70,000,000 francs of silver—a total of 438,000,000 francs.

(This method of counting as part of the metallic reserve of the national bank of Belgium the foreign negotiable paper or discounts held by the bank is unfair for the triple reason that—

(*a*) In a European crisis such foreign negotiable paper might not be redeemed in gold.

(*b*) The paper held by central banks in other countries consists partly of drafts upon the national bank of Belgium and upon the gold reserve of said bank, and such drafts probably offset the negotiable paper held by the Belgium bank.

(*c*) If the said central banks of other countries were to count negotiable paper similarly as part of their metallic reserve, the apparent metallic reserve of Europe would be greatly in excess of the true metallic reserve.

(3) The money in circulation is principally in the form of silver pieces (nickel and copper for pieces of 25 centimes and less), and of national bank bills, which bills are issued in denominations of 1,000, 500, 100, 50, and 20 francs.

The average of the circulation of bills in 1912 was as follows:

	Francs.
Bills of 1,000 francs	216,173=216,173,000
Bills of 500 francs	105,403= 52,701,500
Bills of 100 francs	3,709,554=370,955,400
Bills of 50 francs	2,008,641=100,432,050
Bills of 20 francs	10,294,399=205,887,980
Total	16,334,170=946,149,930

8. No bills are issued by State banks in Belgium. The national bank, which is under the control of the State, of which it is the cashier, alone issues bank notes payable at sight by the national bank.

These bills have legal circulation between private parties so long as the bank pays them at sight and the State accepts them.

On December 31, 1912, the Government reports the amount of bills in circulation to have amounted to 1,034,616,120 francs (compare note 3, question 7, above).

On this date the amount of the metallic reserve of the bank was, according to Government figures, 283,493,930 francs (compare note 2, question 7, above).

The bank possessed, in addition, foreign negotiable paper or discounts valued at 153,290,120 francs, which the Government claims is realizable in gold.

9. Premium on gold during 1912: Highest premium per 1,000 on Paris in 1912, 7½ francs; lowest premium per 1,000 on Paris in 1912, 1¼ francs.

As regards the monetary circulation in the interior of the country, the Belgian Government reports that—

"There is no premium on gold against either silver money or the bank notes of the national bank. That institution has the right to redeem its notes either in gold or silver. In no case is it necessary to pay a premium. So far as private banks are concerned, these latter have the right to exact a premium when they give gold in exchange for notes."

The above statement of the Government is inaccurate. While theoretically the national bank of Belgium is supposed to redeem its notes in gold, practically it refuses to do so and from this refusal there results actually a premium on gold within the country and the unfavorable exchange on Paris shown in the above figures. On April 9 last, one of the staff of this legation presented a 100-franc note of the national bank of Belgium at that institution for redemption in gold. The request was refused. He then went to the Deutsche Bank, in Brussels, where he had to pay 65 centimes in addition to the 100-franc note of the national bank of Belgium in order to procure 100 francs in gold.

11. The administration of the mint publishes a report each year which is sent to the Director of the Mint of the United States.

12 (*a*). Imports and exports of gold during the calendar year 1912:

[Translation.]

General Abstract of the Operations of the Belgian Mint in 1912.

[From report of the manager of the mint to the minister of finances, Brussels, 1913.]

NATIONAL COINS STRUCK IN 1912.

By virtue of the Monetary Convention of November 4, 1908, Belgium acquired authority to proceed to a new coinage of fractional silver coins to the amount of 230,000,000 francs.

That authority was subjected to a double provision. The coinage must not exceed the amount of 60 centimes per inhabitant annually, and must be made only by means of the remelting of Belgian écu and silver pieces of the old Independent State of the Kongo. The first three quotas, amounting to 31,140,000 francs, were coined from 1909 to 1911. In 1912 the fourth quota was struck to the amount of 9,000,000 francs. For this coinage there were used Belgian écu of the value of 8,296,135 francs (705,925 francs with the image of Leopold I and 7,592,210 francs with the image of Leopold II) and Kongolaise coins of the value of 96,105 francs.

The écu remelted belonged to the various issues made from 1832 to 1876. They claim an average loss in weight of 4.1 thousandths, their average fineness being .8997.

The Kongolaise coins remelted consisted of 30,845 francs in écu of 5 francs and 55,200 francs in fractional pieces. These coins of recent manufacture (1887 to 1896) and identical with the types of coins of the monetary union, were but little worn.

The 37,544,934 kilograms supplied by the remelting of coins of the nominal value of 8,304,240 francs served for the coinage of the 9,000,000 francs of new fractional coins. The excess in the nominal value resulted from the difference between the fineness of the écu remelted and that of the fractional coins struck.

Making deductions for the various expenses of manufacture and of verification, the net profits from the coinage represents the amount of 500,470 francs.

The coinage of the 9,000,000 francs was divided as follows:

	Francs.
In 2-franc pieces	1,800,000
In 1-franc pieces	6,200,000
In 50-centimes pieces	1,000,000

The average fineness for the three denominations varied between .83444 and .83496.

Foreign Coins Manufactured at the Mint in Brussels during 1912.

FOR SIAM.

For five years the Belgian mint has been engaged by the Siamese Government for the manufacture of its new pierced coins of pure nickel and of bronze. In 1912 they coined 3,000,000 pure nickel pieces of 5 and 10 stange of the nominal value of 600,000 francs.

FOR ROUMANIA.

The mints at Brussels and at Hamburg have been engaged by the Roumanian Government, each for one-half of the coinage of 32,000,000 lei in new silver coins. These coins are identical as to diameter, weight, and fineness to the fractional coins of the Latin Union. They are destined, for the greater part, to replace worn pieces in the circulation.

In 1912 they coined at the mint in Brussels, as part of the above amount, 6,840,000 silver pieces of 2 lei and 1 lei, of the value of 7,440,000 lei.

COLONY OF THE KONGO.

By virtue of article 11 of the law of October 18, 1908, concerning the Belgian Kongo, the gold and silver coins having currency in Belgium are current under the same conditions in the Belgian Colony. It is lawful for the King to coin special minor coins for the colony, but those coins have no legal currency in Belgium.

In accordance with the provisions of this law, a royal decree of April 14, 1909, demonetized the silver coins of the Independent State of the Kongo. These coins ceased to have lawful currency from October 1, 1909, but up to July 1, 1911, they were accepted by the colonial treasury and at the public pay offices of the Kongo. By royal decrees of May 2, 1911, and October 18, 1912, they successively prolonged that delay to July 1, 1913.

The International Monetary Convention of November 4, 1908, carried for each State of the union the quotas of fractional coins to 16 francs per head of the population, and for the application of that provision estimated the population of the Belgian Kongo at 10,000,000 inhabitants. These coinages must be made by means of Belgian écu.

By special provision Belgium has been authorized to utilize equally for the manufactures of silver coins issues made by the Independent State of the Kongo, which are assimilated to the 5-franc pieces.

From 1909 to 1912 there have therefore been remelted an amount of 1,442,505 francs in old Kongolaise silver coins. Their countervalue has been assigned to the colony.

On January 1, 1913, a reserve of special minor coins of the nominal value of 339,300 francs in nickel pieces and of 14,800 francs in copper pieces was established at the mint, to be remitted to the colony in proportion to its needs.

The colony possessed besides 437,395 francs in old silver pieces, 235,000 francs in old nickel pieces, 33,815 francs in old copper pieces not yet remelted.

The legal monetary circulation of the Kongo is composed equally of silver coins of the different countries of the Latin Union, especially of France, which have been imported in the ordinary way of exchanges.

GUARANTY OF GOLD AND SILVER WORKS.

In 1912 the gold works submitted to the bureau of guaranty were 8 in number. These few articles consisted principally of rings and wedding-rings, of the legal fineness of 750 thousandths (18 carats).

The silver works submitted for stamping were 202 in number. They were all of the legal fineness of 0.800, except two articles of the fineness of 0.900.

As in preceding years, these results point out the degree of insignificance which, in our country, is assigned to the service of the guaranty since the law of June 5, 1868, which declared the manufacture of all gold and silver articles free and suppressed the obligatory registry duty. The law permits only the verification and stamp of the assayer, upon the voluntary requisition of the interested parties, that the gold and silver manufactured works have certain defined finenesses.

The bureau of guaranty, which formerly, administratively, formed part of the administration of contributions assessed, customs and excises, has, for the past three years been transferred to the management of the mint. The duties are performed by an assayer in the laboratory of the mint designated for that purpose by ministerial royal decree of January 18, 1910.

The law of June 5, 1868, suppressed the registry of the State of refined and unrefined gold and silver ingots (bars) from being obligatory to be optional.

Nevertheless, the assayer of the guaranty bureau, conforming to the administrative instructions given in 1869, had continued to comply with the demands of interested parties and to mark, in accordance with the old tariff rates, the fineness of gold and silver ingots.

The law of December 29, 1909, containing the budget of ways and means for the service of 1910 (arts. 6 and 7), regularized this system by establishing legally the official right for the public to ascertain the fineness of ingots and other unmanufactured materials through the assayer for the State. The principal expenses of the assay are to be paid for by the treasury.

The materials assayed in 1912 were distributed as follows:

Description.	Number.	Weight.
		Kilograms.
Silver assays	29	61.883
Gold, plated gold, and gold combined with silver	214	61.527
Bars containing platinum	369	170.505
Platinum filings	18	
Residues, "ashes from gold and silver smiths":		
Containing silver	7	.....
Containing gold	20	.....
Containing platinum	53	.....
Total	710	.....

In 1912 the assayer of the bureau of guaranty verified, besides, for the administration of customs, 29 articles of jewelry and gold and silver smiths' work.

MONETARY CIRCULATION.

Our interior circulation is almost entirely fiduciary. Gold has disappeared, and the écus of 5 francs, which are valued by gold in the countries of the Latin Union, diminish more and more. Their amount was valued during the last 30 years at 200,200,000; they do not appear to be but little more to-day than 100,000,000, notwithstanding the increase of the population and the enormous development of commerce and industry.

As an offset, the circulation of bank notes has passed from 313,000,000 in 1880 to 382,000,000 in 1890, to 576,000,000 in 1900, to 826,000,000 in 1910, and to 882,000,000 in 1911.

Especially the circulation of the denomination of 20 francs, which is partly substituted for the 5-franc piece, to the amount of 14,000,000 in 1880, to 40,000,000 in 1890, to 87,000,000 in 1900, to 171,000,000 in 1910, and to 186,000,000 in 1911.

With regard to the fiduciary circulation, the reserve of the national bank up to May 2, 1912, in round figures, was as follows:

	Francs.
In gold coins	190,000,000
In écus	50,000,000
In foreign drafts	143,000,000
In fractional silver and minor coins	9,000,000
Total	392,000,000

DENMARK.

1. Gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
		Kronor.
Gold (new coinage): 20 kronor	185,981	3,719,620.00

Bank of France	5,584,000,000	3,896,000,000

Uncovered bank notes, 1,688,000,000 francs.

9. Premium on gold during 1912: Gold was at par until October 7, 1912; since then there is a premium of 1 per cent.

10. Copies of the laws of November 17, 1897, and December 29, 1911, continuing the privileges of the Bank of France are inclosed herewith.

11. A copy of the report of the commission of control and a copy of the report of the minister of finance are sent herewith.

Law of August 4, 1913, sanctioning the retirement of French bronze coins in circulation and their replacement by nickel perforated coins.

[From Bulletin de Statistique, Paris, August, 1913.]

The Senate and Chamber of Deputies have resolved, and

The President of the Republic promulgates the law of which the tenor is as follows:

ARTICLE 1. There shall be retired from circulation in France and in Algiers, the 10 and 5 centimes bronze pieces, manufactured in execution of the laws of May 6, 1852, July 18, 1860, August 2, 1872, April 13, 1902, and December 24, 1910, also the 25-centime nickel pieces manufactured in execution of the law of March 31, 1913.

ARTICLE 2. The time at which these coins shall cease to have lawful currency and will not be any longer received at public cash offices shall be fixed by decrees.

ARTICLE 3. The coins retired in execution of article 1 of the present law will be replaced by pure nickel coins of 25, 10, and 5 centimes. These pieces will be pierced in the center with a round hole, and manufactured under the following conditions:

Denomination.	Weight.	Composition.	Weight.	Legal tender.	Value in United States money.
Nickel:	*Grams.*		*Grains.*		
25 centimes	5.0000	Pure nickel	77.1600	To the amount of 5 francs.	$0.0500
10 centimes	4.0000		61.7280		.0405
5 centimes	3.0000		46.2960		.0202
Bronze:					
2 centimes	2.0000	95 per cent copper, 4 per cent tin, and 1 per cent zinc.	30.8640	To the amount of 5 francs.	.0038
1 centime	1.0000				.0019

ARTICLE 4. The selection of the designs for the new coins will be made by agreement in convention. They must comprise two proofs: The first, which shall bear upon the drawings of the designs, will be eliminatory; the second, which shall bear upon the admitted designs for their execution into the coins, shall be decided upon by choice. The conditions of the convention and the composition of the jury will be determined by a decree. The types of the new coins will afterwards be fixed by decree.

ARTICLE 5. The total issue of the 25, 10, and 5 centimes pieces, established by the present law, and of the 2-centimes and 1-centime bronze pieces established by the law of May 6, 1852, shall not exceed the accumulated amount of the contingents fixed by the law of December 24, 1910, for the bronze pieces of 10, 5, 2, and 1 centime and by the law of March 31, 1903, for the pure nickel 25-centimes pieces.

ARTICLE 6. The new nickel coins will not have to be accepted in payments, except by private agreement, for more than the value of the 5-francs piece.

ARTICLE 7. With a view to providing for the replacement of the coins of which the retirement is ordained by the present law, they will be credited to the budget attached to the coins and medals as part of the service of 1913.

1st. Of the proceeds from the issue of the nickel coins.

2nd. Of the proceeds from the sale or the transformation of metal resulting from the pieces retired from circulation.

3rd. Of the surplus of the receipts over expenses resulting from the remainder of the operations effected in the course of the preceding service as much for the issue of the new coins as for the retirement of the old ones.

ARTICLE 8. The profits resulting from the entire operations will be diverted to the reserve funds designed for the maintenance of the monetary circulation.

The present law, deliberated upon and adopted by the Senate and Chamber of Deputies, shall be executed as a law of the State.

Made at Paris, August 4, 1913.

By the President of the Republic,

R. POINCARE.

The Minister of Finances,

CHARLES DUMONT.

GERMANY.

1. The gold coinage in the calendar year 1912 was as follows:

Denomination.	Pieces.	Value.
		Marks.
Double crowns (20 marks)	6,382,991	127,659,820
Crowns (10 marks)	881,601	8,816,010
Total	7,264,592	136,475,830

The above coinage was made from gold coins no longer fit for circulation of the weight of 5,530.1610 kilograms and from gold bars all purchased from the Reichsbank.

The silver coinage in 1912 was as follows:

Denomination.	Pieces.	Value.
		Marks.
3 marks	8,227,911	24,683,733
2 marks	1,468,814	2,937,628
1 mark	4,179,402	4,179,402
50 pfennigs	5,183,666	2,591,833
Total	19,059,793	34,392,596

2 (*a*). Coins struck at the Hamburg mint during 1912:

FOR GERMAN EAST AFRICA.

Denomination.	Pieces.	Value.
		Rupees.
Silver:		
Rupee	300,000	300,000
Half rupee	200,000	100,000
Quarter rupee	400,000	100,000
Total	900,000	500,000

2 (*b*), 9, 10, and 11. No.

* * * * * *

4. Only gold and silver coins no longer fit for circulation and new gold and silver bars were used by the mint for coinage during 1912.

5. No United States gold coins were imported during 1912.

* * * * * * *

7. Stock of gold and silver coin and bullion in the country on December 31, 1912:

	Marks.
Gold coinage up to the end of December, 1912 (after deducting recoinages)	4,935,003,380
Imperial gold coin in Reichsbank December 31, 1912	439,314,000
Gold bullion and foreign gold coins in Reichsbank on same date	337,334,000
Total	776,648,000
Silver coinage up to the end of December, 1912 (after deducting recoinages)	1,099,581,929
Silver coins in Reichsbank on same date	255,376,000

The amount of gold and silver held by the treasury is not known, except as to the available war fund of 120,000,000 marks in gold coin.

8. The bank notes in circulation on December 31, 1912, amounted to 2,674,300,000 marks, of which 1,519,232,000 were not covered by legal-tender gold and silver coin or bullion.

The Imperial Treasury notes outstanding are to the amount of 120,000,000 marks, equal to the available war fund in gold coin, which the Empire holds in reserve, and they bear no interest.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1912:

GOLD.

1 Gold and silver scrap valued at 9,344,232 marks.

Gold and silver exported: Not specified, 39,353 kilograms, valued at 6,675,000 marks.

GERMANY'S STOCK OF GOLD.

The Frankfurter Zeitung in a recent issue deprecates the lack of reliable statistics as to the amount of gold in Germany. A few years ago the statistics compiled in America of Germany's gold reserve passed unchallenged at 4,500,000,000 marks. These have now been increased to 5,000,000,000, but earnest attempts have been made lately to get nearer the truth. The Frankfurter in August, 1910, estimated Germany's gold, exclusive of that in the Julius Tower, at 2,800,000,000 marks, and this was practically confirmed by the writings of Dr. Arnold, a Reichsbank director, who put the German minted gold at the end of 1909 at between 2,750,000 to 2,850,000 marks, and at the end of 1910 his estimate was 3,000,000,000 marks. What change has there been in the 3¼ years? To obtain an accurate idea of this, not only must the gold imports and exports be accurately given, but the amount used in industry must be calculated with fair precision. The foreign commerce figures give the value of the precious metals imported and exported, but even official statistics are apt to be inaccurate and can not take account, for instance, of the large sums of money which enter and leave the country on the persons of tourists and other travelers. The official trade returns show that between January 1, 1910, and March 31, 1913, 562,850,000 marks more gold was imported than exported. Naturally this does not mean that the net increase was this important amount, as industry and ornaments consume enormous quantities yearly. Inquiries as to this home consumption were made for 1896–97 and for 1906–7. The former year's consumption by industry, etc., was 45,000,000 marks, and the latter was 88,250,000 marks. The Reichsbank assumes that from 110,000,000 to 120,000,000 marks is used for industrial purposes, of which between 42 and 45 per cent was gold that had been in the country before 1910, the year to which these statistics refer.

The American Director of the Mint considers that in this year Germany used about 98,200,000 marks, a good third—32,700,000—coming from gold which had been in the country before 1910. The German Gold and Silver Anstalt in Frankfort has compiled figures which give different results. It is estimated that, allowing for the metal absorbed by industry, there should remain from 158,000,000 to 333,000,000 marks to strengthen Germany's gold reserve, which has in that period risen from 3,150,000 to 3,300,000 marks. It must be remembered that the Reichsbank has in several months extraordinarily increased the gold imports. In December, 1912, for instance, 60,000,000 marks of gold was brought into Germany, and in March, 1913, almost 46,000,000, and but for this "forcing" the gold reserve would have shown but little increase. The foregoing contradictory figures, from which, however, a certain amount of accuracy is obtainable, show, says our contemporary, how imperatively necessary a detailed gold inquiry is.

GREAT BRITAIN.

1. Amount of gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Gold:		£ s. d.
Sovereigns	30,295,715	[1] 30,295,715 0 0

Pence	1,447	.....

[1] Of which amount £2,170,000 in sovereigns and £980,000 in half-sovereigns, total £3,150,000, weighing 801,158.980 standard ounces, of the coinage value of £3,119,512, 15s. 6d., also £85,463 in sovereigns and £16,537 in half-sovereigns, total £102,000, received as bullion, weighing 25,000 ounces, of the coinage value of £97,343, 15s., is classified as recoinage of domestic gold coins.

[2] Of which amount £544,205, 8s. 5d. was from the recoinage of mixed dollars unspecified, weighing 22,428.10 ounces, standard.

2 (*a*). Coinage executed for other Governments during 1912: Australia, in silver 2-shilling, 1-shilling, 6-pence, and 3-pence pieces, £250,000; Newfoundland, in silver 20-cent, 10-cent, and 5-cent pieces, $100,000; Mauritius, in bronze 2-cent pieces, 5,000 rupees; East Africa and Uganda, in silver 50-cent and 25-cent pieces, 95,000 rupees.

2 (*b*), and 4. None.

5. Value of gold ore and gold bullion imported into the United Kingdom from United States of America in 1912:

Classification.	Value.
Gold ore	£1,758
Gold bullion:	
Unrefined in dust, amalgam and bars	10,322
Refined, in bars	6,464
Total	16,786

NOTE.—The returns do not distinguish the nationalities of foreign gold coin imported into the United Kingdom.

No United States gold coin melted at mints.

* * * * * * *

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Classification.	In banks.	In circulation.
Gold coin	[1] £44,000,000	[1] £69,000,000
Silver coin	6,000,000	20,000,000

[1] Figures of 1910, since when no estimate has been made.

No information available regarding the stock of gold and silver bullion.

8. No notes are issued by the Government. The average weekly circulation for the month ended December 11, 1912, was as follows:

Bank of England (month ended December 11)	£28,373,234
Private banks	80,727
Joint stock banks	80,070
Total in England	28,534,031
Total in Scotland	8,005,969
Total in Ireland	7,828,029
Total for United Kingdom	44,368,029
Deduct for:	
(1) Gold coin and bullion held in the Bank of England against notes in circulation	9,923,630
(2) Gold and silver in Scottish and Irish banks of issue held against notes	[1] 10,510,382
Total	20,434,012
Amount of bank notes outstanding not covered by legal tender gold and silver coin or bullion at the end of the year 1912	[2] 23,934,017

9. Premium on gold during 1912: Per ounce, standard, highest price, s. 77 d. 9½; lowest price, s. 77 d. 9; average price, s. 77 d. 9.

10. No change in currency was made in 1912.

11. Copy of the mint report is forwarded herewith.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1912.

[1] Not specifically earmarked to redemption of notes.
[2] This amount includes £18,450,000 which the Bank of England is authorized to issue against securities.

A return, showing the imports into the United Kingdom of each description of gold and silver coin and bullion, of gold and silver ore, and of gold leaves, during the year 1912, and showing the countries whence consigned.

STATISTICAL OFFICE,
Custom House, London, E. C.,
June 10, 1913.

(Signed) S. BOZMAN,
Deputy Principal.

13. The following corrections are suggested in the appended description of the coins of this country:

(1) Omit "Sierra Leone, Gambia, the Gold Coast, Lagos, and British New Guinea." Include "South Africa."

(2) The following figures would approximate more nearly the weights given in the schedule of the coinage act than those printed in the tables headed "Gold" and "Silver":

Gold.	Grams.	Fine grams.	Silver.	Grams.	Fine grams.	(3) Minor coins.	Weight.
							Grains.
5 pounds	39.4030	36.6119	Half crown	14.3800	13.0776	Penny	145.8333
2 pounds	15.9761	14.6450	Florin	11.3104	10.4621	Halfpenny	87.5000
Sovereigns	7.9880	7.3224	Shilling	5.6552	5.2311	Farthing	43.7500
Half sovereigns	3.9940	3.6612	Sixpence	2.8276	2.6155		

(4) "The present legal ratio between gold and silver in the coinage of Great Britain is as 1 to 14.28781, silver coins being a legal tender only for sums not exceeding 40s. or £2 (equal to $9.732 in United States money)."

(5) A short memorandum is appended, which gives a somewhat more complete account of colonial currency than that contained in the description as it now stands:

The British token currency is in use in the colonies of South and West Africa, British Central Africa, Australia, New Zealand, the West Indies and Bermuda, Malta, Gibraltar, St. Helena, the Falkland Islands, and the Fiji Islands. In addition to the Indian Dependencies, Australia, Canada, East Africa and Uganda, West Africa, British Honduras, Ceylon, Cyprus, Hong Kong, Jamaica, Mauritius, British North Borneo, Newfoundland, and the Straits Settlements have coinages of special design for local circulation. Fourpences of special design are struck for circulation in British Guiana and the West Indies, and one-third farthings for circulation exclusively in Malta. The Islands of Jersey and Guernsey, respectively, have bronze coinages of special design for local circulation. The British tokens in circulation in Australia and the West African colonies are being gradually withdrawn and replaced by the new coinage.

In Canada the gold coins of the United States are legal tender and also the pound sterling or sovereign, at the rate of $\$4.86\frac{2}{3}=£1$.

GREECE.

1, 2 (*a* and *b*), 3, 4, 5, 6, 10, 11, and 12. Unknown.

7. Approximate stock of gold and silver in the country on December 31, 1912:

Classification.	In banks.	In circulation.
		Drachmas.
Gold coin	$4,000,000	[1] 15,000,000
Gold bullion		
Silver coin		
Silver bullion		

[1] Coin consisting of silver pieces of 1, 2, and 5 drachmas and lepta pieces; copper or nickel of 1, 2, 5, 10, and 20 lepta. There are in addition a few 20-drachma and 10-drachma gold pieces in circulation. There is no mint in Greece, and most of the new silver and nickel coins have been struck in Paris.

8. Total of bank notes outstanding at the end of the year 1912, 208,000,000 drachmas, of which 108,000,000 drachmas were not covered by gold, and 100,000,000 drachmas were covered by bills on Paris or London. (Paper notes consisting of 5, 10, 25, 100, 500, and 1,000 drachma notes.)

ITALY.

1. Amount of gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
		Lire.
Gold (new coinage):		
100 lire	4,946	494,600
50 lire	11,230	561,500
20 lire	59,970	1,199,400
10 lire	6,796	67,960
Total	82,942	2,323,460
Silver (new coinage):		
2 lire	2,166,202	4,332,404
1 lire	5,864,646	5,864,646
Total	8,030,848	10,197,050

The recoinage of native silver coins amounted to 3,579,911 lire.

2 (*a* and *b*) and 5. None.

3. The necessary data for answering this question can not be obtained.

4. None. The gold and silver coinage in 1912 was all made from the remelting of old coins and bullion bought on the market.

10. Coinage law of October 31, 1912, annulling the coinage law of May 28, 1901, prescribed as follows for the Netherlands and Netherlands-Indies:

Lawful gold coins with full paying power in any amount are as follows: 10-gulden (florin) pieces and 5-gulden pieces.

Silver coins for payment in limited amount: Riksdollar (2½ guldens), gulden (or florin), ½ gulden, ¼ gulden, $\frac{1}{10}$ gulden.

Nickel coins: 5-cent pieces.

Copper coins: 2½-cent pieces, 1-cent pieces, ½-cent pieces.

Riksdollars of 2½ guldens are only coins of reckoning in calculations in the country and are to be withdrawn from circulation and recoined by the Netherlands into lawful silver coins for the Netherlands-Indies.

The Netherlands coins with their weight, fineness, etc., are as follows:

[1] Given by the ministry of finance in total amounts.

LEGATION OF THE UNITED STATES OF AMERICA,
Bucharest, April 16, 1913.

The SECRETARY OF STATE,
Washington, D. C.

SIR: I have the honor to report that the amendment to the coinage law authorizing the coinage of an additional 8,000,000 francs of silver money has now passed the Roumanian Parliament and will probably be promulgated at an early date.

Prior to 1909 there was in circulation silver money amounting to 59,500,000 francs. By a law dated March 24 (old style) of that year additional coinage to the amount of 32,000,000 francs was authorized, while old coins of the nominal value of 28,290,000 francs were to be withdrawn from circulation. The provisions of that law have as yet, however, been only partially carried out, the new coinage amounting to only 23,513,000 francs, and the withdrawals to 12,832,000. This makes the amount of silver money in circulation at present 70,181,065 francs, as follows: 23,660,400 in 5-franc pieces, 17,059,710 in 2-franc pieces, 20,364,465 in 1-franc pieces, 8,496,490 in ½-franc pieces. Consequently, if the provisions of the law of 1909 were to be carried out, 15,448,000 francs of old coins would be withdrawn, while only 8,486,935 of new silver would take its place, and the amount now in circulation would be reduced by about seven million francs.

The intention now is to coin new money to the full amount authorized, and to refrain for the present from the withdrawal of the old coins, which would make the amount in circulation—

	Francs.
In 5-franc pieces	23,660,400
In 2-franc pieces, 19,351,110 (new) and 5,708,600 (old) or	25,059,710
In 1-franc pieces, 21,857,000 (new) and 5,794,400 (old) or	27,651,400
In ½-franc pieces, 6,351,490 (new) and 3,945,000 (old) or	10,296,490
Total	86,668,000

This will make the amount of silver money in circulation about 12 francs per head of population, no more than is thought to be absolutely necessary.

I have the honor to be, sir, your obedient servant,

JOHN B. JACKSON.

RUSSIA.

1. In the year 1912 no gold was coined in Russia. In 1912, silver was coined as follows:

Denomination.	Pieces.	Value.
		Rubles.
1 ruble (at 0.900)	2,111,221	2,111,221.00
50 kopecs (at 0.900)	7,085,008	3,542,504.00
20 kopecs (at 0.500)	15,000,008	3,000,001.60
15 kopecs (at 0.500)	13,333,341	2,000,001.20
10 kopecs (at 0.500)	20,000,008	2,000,000.80
5 kopecs (at 0.500)	3,000,009	150,000.40
Total	60,529,595	12,803,729.00

In 1912 the following amount of coin was withdrawn from circulation and recoined:

	Rubles.
Silver, at 0.900	239,606.10
Silver, at 0.500	4,274,444.00
Total	4,514,050.10

2. (*a* and *b*), 5, 9, 10 and 11. None.

* * * * * * *

7. On January 1, 1913, the amount of gold coin in the vaults of the State bank amounted to 666,900,000 rubles—528,500,000 being in Russian money and 138,400,000 in foreign money. At the same date the amount of gold in circulation was 629,300,000 rubles.

8. On January 1, 1913, the amount of bank notes in circulation was 1,493,800,000 rubles, and of gold (coin, bars, and balance abroad) belonging to the State bank, 1,550,200,000 rubles. As, according to the law, the first 600,000,000 rubles of notes must be guaranteed by 300,000,000 rubles in gold, and beyond 600,000,000 rubles all notes issued must be secured by gold, ruble for ruble, the issuing power of the State bank was, on January 1, 1913, 456,400,000 rubles.

SERVIA.

1, 2 (*a* and *b*), 4, 10 and 11. None.

* * * * * * *

5. United States gold coin imported during 1912: $500. None melted at mints.

* * * * * * *

7. Approximate stock of gold and silver coin in the country on December 31, 1912:

REPORT ON COINAGE OF SMALL MONEY IN SERVIA.

CONSULATE OF THE UNITED STATES OF AMERICA,
Belgrade, April 16, 1913.

For some time past there has been a general complaint on the part of merchants and others in Servia that the supply of small coins was not sufficient to meet the demands of the public and, in consequence, the minister of finance has submitted to the Skouptchina, which body has approved the same, the following law:

PROVIDING FOR THE COINAGE OF MONIES OF SILVER AND NICKEL.

ART. 1. The minister of finance is hereby authorized to have coined and put into circulation five million (5,000,000) silver coins of one dinar, bearing date of 1912, said coinage to be based on the laws of December 10th, 1878, and February 26th, 1904.

ART. 2. The minister of finance is further authorized to coin and place in circulation, when the circumstances so demand, five million (5,000,000) dinars, in silver, in pieces of two, one and 0.50 dinars, respectively, in accordance with the laws above mentioned.

ART. 3. The minister of finance is authorized to have coined and to place in circulation nickel coins to the value of 2,400,000 dinars, in conformity with the law of the first of January, 1883. The value of the denominations so coined shall be the same as at present, and will bear the date 1912.

ART. 4. The expenses incident to the coinage shall be paid from the net profits of the transaction and the balance credited to the State's extra budget.

ART. 5. This law shall enter into full force after the fixing of the Royal signature.

(Signed) D. PATCHON,
Minister of Finance.

Monetary Stock in Switzerland, 1911.

[From the French Mint Report for 1912.]

From the estimation made by a specialist and given with all reservations, the monetary stock of the Helvetian Republic amounted to 220,000,000 francs in gold coins and to 80,000,000 francs in silver coins.

The reserve of the national bank on December 31, 1911, was 160,666,436.71 francs in gold and 9,188,380 francs in silver.

Banking System of Switzerland.[1]

[From Consul General R. E. Mansfield, Zurich.]

The number of banks in Switzerland at the close of 1910 was 606. Of this number, 19 were State banks, or institutions of which the capital belonged to the respective Cantons. Their total capitalization was 183,000,000 francs—equivalent to $35,319,000 in American currency. Of the remaining 587, the paid-up capital of 24 banks exceeded 10,000,000 francs each (1 franc equals 19.3 cents), 93 were capitalized at 1,000,000 to 10,000,000 francs each, and 254 were local institutions which did not publish annual reports.

Before the Swiss National Bank was founded in 1906 any Swiss bank having a capital of 500,000 francs ($96,500) had the privilege of issuing bank notes, provided it was either a State institution or a stock company publishing regular reports. These banks were obliged to maintain a cash reserve of 40 per cent of their notes in circulation. The remaining 60 per cent could be secured by State guaranty, by securities, or by commercial bills of exchange. The Federal Government levied a tax of 1 per cent on the amount of notes issued. The different Cantons were entitled to tax the note-issuing banks within their jurisdiction up to 6 per cent on the same basis.

In 1888 there were 34 banks in the country issuing notes. A number of them were capitalized at or near the minimum stipulated by law, and the amount of cash reserve over and above the 40 per cent was in many cases small. As security for the remaining 60 per cent, a liberal use was made of the State guaranties. There was a lack of uniformity in discount rates, caused by the keen rivalry of these banks, and of concerted action on their part in critical periods when a uniform raising of the rates would frequently have stopped the outflow of currency to other countries.

Swiss National Bank.

To overcome the disadvantages of this system, the Federal constitution was amended in 1891, giving the Government authority to establish a national bank, but it was not until January, 1906, that the law governing its functions went into effect. The present capital of the Swiss National Bank is 50,000,000 francs ($9,650,000), divided into 100,000 shares, of which amount 50 per cent has been paid in. Two-fifths were subscribed by the Cantons in proportion to their population, and one-fifth by the old note-issuing banks; the remaining two-fifths were offered to the public in registered shares, the right of shareholders to vote being limited to Swiss citizens or firms domiciled in Switzerland. The National Bank and its branches are free from taxation by the Cantons.

The issue of bank notes by the Swiss National Bank is under control of the Federal Government, their nominal value being 50, 100, 500, and 1,000 francs. The Government may also permit temporarily the issue of 20-franc notes. The reserve kept by the bank must be equal to the face value of the notes in circulation. It may consist of legal currency, of gold bars, or foreign gold coins and bills of exchange, either domestic or foreign, and of other domestic discountable certificates of indebtedness. The metal reserve must amount to 40 per cent of the face value of the notes in circulation, and the bills discounted must not bear less than two independent signatures. The bank is obliged to redeem its notes upon demand, giving legal currency in exchange therefor. The note-issuing privilege is given for a term of 20 years. Renewals of this privilege must be granted by Federal law and for periods of 10 years only. The Government reserves the right to take over the assets and liabilities of the National Bank in place of a renewal of the note-issuing privilege, by giving one year's notice. In this case the shares will be redeemed at par and interest at 4 per cent during the period of liquidation. Of the reserve fund, one-third will go to the Government to be handed over to the new bank, one-third to the Cantons according to their population and one-third to the old shareholders.

[1] From Daily Consular and Trade Reports, Aug. 6, 1912.

OTHER FUNCTIONS—DISPOSITION OF EARNINGS.

Other functions of the Swiss National Bank permitted by the law of January 16, 1906, as amended September 27, 1911, are: Discounting checks and drafts payable in Switzerland, running not longer than 90 days and bearing at least 2 independent signatures; purchase and sale of checks and of drafts (running not longer than 90 days and having at least 2 independent signatures) on foreign countries having a metal currency, and of treasury bills of such countries; granting loans for not longer than three months against deposits of securities and other certificate of indebtedness (excluding, however, shares of any kind); acceptance of deposits from the Government or private parties, in the latter case without interest; collection of drafts; purchase of interest-bearing debentures of the Government or of the Cantons, for the temporary investment of its funds; purchase and sale of precious metals, coined and in bars, for its own account and for account of others; issue of gold and silver certificates; custodianship (free of charge if they belong to the Government) of securities and other valuables; purchase, subscription, and sale of securities for account of others; acceptance of subscriptions of others on Federal and Cantonal loans, without becoming a participant itself in such loans. The bank is obliged to publish at regular intervals its discount and interest rates, to issue weekly statements showing its condition, and to publish annual reports.

The net income of the bank is distributed in the following manner: Ten per cent (but not more than 500,000 francs in any one year) is added to the reserve fund; of the remainder, the shareholders receive a dividend not exceeding 4 per cent; from the balance the Cantons are entitled to a certain amount to reimburse them for the loss of the privilege of issuing bank notes. This is based upon their authorized note issue on December 31, 1904, and upon their population according to the last census. (If the net profits are not sufficient to provide for this reimbursement in full, the Federal treasury must advance the necessary amount, charging interest at 3½ per cent per annum, these advances to be returned as soon as possible.) Of the balance still remaining after reimbursement to the Cantons and after payment of such advances as may have been made by the Treasury, one-third goes to the Government and two-thirds to the Cantons in proportion to their population according to the last census.

SUPERVISION AND ADMINISTRATION.

The general supervision and administration of the Swiss National Bank is in the hands of a board called the "bankrath," consisting of 40 members elected for a term of 4 years. The first members of the board are the president and vice president, who are elected by the Federal Council. Following their appointment, 15 members are elected by the shareholders at their annual meeting and the remaining 23 members by the Federal Council. Of the latter number, not more than five may be members of of congress and not more than a like number members of the Cantonal Governments. Members are eligible for reelection. Seven members of this board, including its president and vice president, act as its delegates in the administration of the bank. No Canton may be represented by more than one member in this administrative committee. The supervision of the branch offices lies with local committees consisting of three or four representative merchants of the respective localities, appointed by the board for a term of four years. The executive branch of the National Bank consists of three directors, appointed for six years by the bank council subject to approval by the Federal Government. One director and one subdirector are appointed in like manner for each of its branches.

Although the Swiss National Bank did not commence business until June 20, 1907, its development has been satisfactory. At present it maintains, besides its main offices in Berne, branches at Basel, Geneva, Lausanne, Neuchatel, St. Gall, and Zurich. The notes in circulation on December 31, 1911, amounted to $60,747,889, American currency, while the average metal reserve was 68.35 per cent. Domestic drafts to the amount of $174,281,789 were discounted, and $70,399,876 of foreign drafts purchased. The amount of cash on hand was $40,719,830, of domestic drafts $25,174,708, and of foreign drafts $4,051,152. Its clearings amounted to $3,373,644,597, and its net profits to $497,016.

INFLUENCE UPON THE FINANCES OF THE COUNTRY.

The influence of the Swiss National Bank upon the finances of the country has already been a most beneficial one. The quality of the guaranty underlying the bank notes of Switzerland and the country's credit abroad is much improved. The note issue has acquired an elasticity sadly lacking under the old system. The discount rates have not only become much more stable but more favorable to the country.

The beneficial influence of the National Bank in this respect is best illustrated by the fact that whereas from 1903 to 1906 the average discount rate of Switzerland exceeded that of France, England, Germany, Belgium, Holland, and Austria by 0.48 per cent, for the period 1908–1911 it was lower by 0.35 per cent. It has been estimated that this alone resulted in a saving to the country of $2,721,300 for the four years.

The careful scrutiny to which drafts offered to the National Bank are subjected by it has exercised a most salutary influence on their character. Its powerful influence upon other Swiss banks has resulted in a decided improvement in their character and current assets. Last autumn, during a critical period in the banking business, the National Bank purchased foreign drafts to an amount almost equaling its entire reserve, which not only avoided an anticipated advance in the discount rate but saved the Swiss money market from serious disturbance.

The statistical matter contained in the foregoing report was obtained from one of the leading banking institutions in Zurich.

TURKEY.

1. Gold and silver coinage (Mar. 14, 1912, to Mar. 13, 1913), Turkish year 1328:

GOLD.

Denomination.	Pieces.	Value.
		Pounds.
5 pounds	46,354	231,770.00
2½ pounds	24,167	60,417.50
1 pound	3,671,984	3,671,984.00
½ pound	147,652	73,826.00
¼ pound	346,034	86,508.50
⅛ pound	19,882	2,485.25
Total	4,256,073	[1] 4,126,991.25

[1] Of which 77,038 Turkish pounds (face value 80,889 Turkish pounds) was recoinage from domestic coins and 2,577,566 Turkish pounds was recoinage from foreign coins (face value 2,564,140 Turkish pounds), of which amount English gold represented 2,487,065 Turkish pounds.

SILVER.

Denomination.	Pieces.	Value.
		Piasters.
½ medjidie	96,003	960,030
¼ medjidie	1,635,206	8,176,030

Total	5,762,639	[1] 17,198,920
Turkish pounds	----------	159,249

[1] Of which amount 10,497,923 piasters=97,203 Turkish pounds (face value 12,381,381 piasters=114,642= Turkish pounds) was recoinage from domestic coins and 84,448 piasters=782 Turkish pounds (face value 40,089 piasters=371 Turkish pounds) was recoinage from foreign coins.

2 (*a* and *b*), 9, and 10. None.

3, 4, and 5. Information not obtainable. Not known.

* * * * * * *

7. Unknown. The Imperial Ottoman Bank reports that it is impossible to state the "stock of gold and silver in its Constantinople and branch banks," and that this fact added to the common custom of hoarding coin makes it impossible to make an intelligent conjecture of the amount of coin in circulation.[1]

8. Bank notes outstanding at the end of the year 1912, 1,200,000 Turkish pounds, which are entirely covered by gold holdings.

11. There is no published report on the operations of the mint. The latest published report of the department of mines, which was in the Turkish language, covered the year 1325 (March, 1909–March, 1910).

12 (*a* and *b*). Information not available. The customs authorities state that this information can not be furnished, as the returns of the various ports are slow in coming in. The latest available report is for the year 1326 (March, 1910–March, 1911).

[1] *Monetary stock.*—The monetary stock of the Ottoman Empire may be estimated at 30,000,000 Turkish pounds for gold and 6,500,000 pounds for silver.

ASIA.

ARABIA.

Aden.

1 and 2 (*a* and *b*). No mint in Aden. Aden is under British government, and the mint is in Bombay.

3, 4, 5, 6, 10 and 11. None.

7 and 8. Unknown.

9. There is no premium on gold. The actual currency of the country are the rupee and sovereign (rupees 15 to the pound sterling).

12 (*a*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold bullion.		Silver bullion.	
	Imports.	Exports.	Imports.	Exports.
Hodeidah	$948,035			$903,573
Jeddah	268,407

Suakin and Port Sudan				77,570
Massowa				303,848
Zanzibar				67,345
Ghizan				33,367
Total	1,405,690	2,427,089	1,804,108	1,959,393

Muskat.

1, 2 (*a* and *b*), 4, 5, 6, 8, 9, 10, and 11. None.

* * * * * * *

7. Approximate stock of gold and silver in the country on December 31, 1912:

Description.	In circulation.
Gold coin	$10,000
Silver coin	500,000
Silver bullion	10,000
Total	520,000

In the Sultanate of Oman there is no mint and there are no banks or mines. The coinage principally used is the Austrian Maria Theresa dollar. British sovereigns and Indian rupees are also used. No statistics of any sort are available and figures given are merely estimates. The estimates of the amount of coin and bullion in the country were made by local merchants who should have the best knowledge of the matter.

12 (*a* and *b*). Imports and exports of silver during the year 1912:

SILVER.

Country.	Imports of coin.	Exports of bullion.
British India	$192,000	$192,000

No figures are obtainable for gold. There are no statistics, not even of imports and exports, collected in this country, and there is no mint, so it is impossible to give figures that are in any way reliable.

BRITISH INDIA.

1. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
		Rupees.
Whole rupees	124,339,222	124,339,222.00
Half rupees	5,288,755	2,644,377.10
Quarter rupees	9,603,442	2,400,860.20
Eighth rupees	18,605,781	2,325,722.50
Total	157,837,200	[1] 131,710,181.80

[1] Of the above total value, 104,207,983 rupees was new coinage, 25,687,923 rupees was recoinage of foreign coins, and 1,814,277 recoinage of domestic coins; total, Rs. 27,502,200.

NOTE.—The face value of coins received into the mints for recoinage during the year 1912 was Rs. 29,108,000. The face value of coins actually melted during the year was Rs. 27,109,883, but this does not represent the silver operated upon to produce coins worth Rs. 27,502,200.

No gold was coined.

2 (*a*). Coinage executed for other Governments:

Classification.	Silver.
	Tale.
British dollars for exchange banks	14,274,810
Subsidiary coins for the Government of the Straits Settlements:	
10-cent pieces	67,708
5 cent pieces	479,870
Total	14,822,388

3. It is regretted that no information is at present available concerning the amount of gold and silver used in the industrial arts.

4. No gold coins are coined at the Indian mints. The Indian mints do not receive old bullion from the public for coinage.

* * * * * * *

8. Government and bank notes outstanding at the end of the year 1912:

Items.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings (coin and bullion).
	Rupees.	*Rupees.*	*Rupees.*
Government notes	657,015,865	376,439,168	140,576,731
Banks of issue [1]	----------	----------	----------
Total	657,015,845	376,439,168	140,576,731

[1] No bank in India has a note issue. The only notes in circulation are those of the Government. The amount of Government notes outstanding at the end of the year 1912 not covered by gold, silver coin, and bullion was Rs. 139,999,946.

9. Throughout the year 1912 gold was for the purposes of foreign exchange at a discount. The par is 16d.=Rs. 1=7.53544 grains of fine gold. Highest discount, grains of fine gold 0.064 (corresponding to Rs. 1=16.135d.); lowest discount, grains of fine gold 0.015 (corresponding to Rs. 1=16.031d.); average discount, grains of fine gold 0.033 (corresponding to Rs. 1=16.070d.).

10. No laws regarding coinage, currency, or banking were enacted during the year.

12 (*a*). Imports and exports of gold during the calendar year 1912:

Indian Monetary Statistics for 1911–12.

The current coinage minted in India consists of:

Classification.	Weight (grains, troy).	Fineness.	Legal tender.
		Thousandths.	
Silver:			
Rupee	180.000	916⅔	To any amount.
Half rupee (8 annas)	90.000	916⅔	
Quarter rupee (4 annas)	45.000	916⅔	
Eighth rupee (2 annas)	22.500	916⅔	
Copper:			
Double pice (half anna)	200.000	.....	For fractions of a rupee.
Pice (quarter anna)	100.000	.....	
Half pice (eighth anna)	50.000	.....	
Pie (twelfth anna)	33.333	.....	
Nickel, 1 anna	60.000	.....	
Bronze:			
Pice (quarter anna)	75.000	.....	
Half pice (eighth anna)	37.500	.....	
Pie (twelfth anna)	25.000	.....	

Rupees bearing on them the date 1840, as also the coinage of the mints from 1840 to 1862, of the aggregate value of 107.82 crores of rupees, are in course of withdrawal from circulation. Under the Indian coinage act (act III of 1906) the denominations, value, and fineness of the silver coinage have not been affected, but the nickel and bronze coinages, introduced in 1907 and 1906, respectively, are intended to supersede eventually the old copper coinage.

No gold coins have been minted in India since 1891–92, and gold mohur and its submultiples have practically disappeared from circulation. Sovereigns and half sovereigns minted either in England or Australia are recognized as legal tender to an unlimited amount at the rate of 1 sovereign to 15 rupees, provided that they have not been called in or lost weight beyond the limit prescribed as the lowest current weight, viz, 122.5 grains for the sovereign and 61.125 grains for the half sovereign, the full legal weight being 123.27447 and 61.63723 grains, respectively.

* * * * * * *

In addition to the coinage of silver for circulation in India, the mints also coined British dollars for circulation in Hongkong as also in the Straits Settlements until 1903, when, owing to a change in the currency policy in the Government of the latter colony, a new dollar was introduced there, the coinage of which has been undertaken at the Bombay mint since September, 1903. Since April, 1905, the coinage of the Straits' 50-cent pieces has been undertaken in the Bombay mint, and since October, 1909, the coinage of the 20-cent (the coinage of 20-cent pieces actually commenced in May, 1910), 10-cent, and 5-cent pieces for the Straits Settlements Government has further been undertaken in the same mint.

The British dollar is 416 grains troy in weight and of 900 millesimal fineness and the Straits dollar is of the same weight and finness. The 50-cent piece weighs 209.52 grains and is of 800 millesimal fineness, and the 20-cent, 10-cent, and 5-cent pieces weigh 83.81, 41.90, and 20.95 grains, respectively, and are of 600 millesimal fineness. With the expiry in December, 1903, of the special agreement with the banks for the coinage of British dollars, the number coined fell to 3,955,647 in 1903–04 and 648,847 in 1904–05, while the coinage in these two years of Straits dollars was 15,009,891 and 20,364,664 pieces, respectively. No dollars were coined in 1905–06 or in 1906–07, but the coinage was resumed in 1907–08, and last year 37,470,509 British dollars were coined in the Bombay mint. Fifty-cent pieces have so far been coined only once and that in 1905–06.

* * * * * * *

ESTIMATE OF THE QUANTITY OF GOLD ANNUALLY EMPLOYED IN INDUSTRY.

There are no data from which to make an estimate, except that it may be said that all the uncoined gold imported is manufactured into plate and ornaments. All the gold produced in the Indian mines is exported to London for assay.

ESTIMATE OF THE QUANTITY OF SILVER ANNUALLY EMPLOYED IN INDUSTRY.

Until the closure of the Indian mints in June, 1893, practically all the silver imported into India—no silver being produced in the country (the quantity of silver extracted from silver-lead ore in Burma was some 30,000 ounces in 1909, 44,000 ounces in 1910, and 80,000 ounces in 1911)—was coined either in the mints of the Government or in those of the native States. Much of the coin was withdrawn annually from circulation to be hoarded or converted into ornaments, but there are no data except the imports of silver during the period since the closure of the Government mints on which to frame an estimate of the quantity actually so withdrawn. The import trade in silver was materially influenced for a period by speculation arising out of the special and transitory conditions which followed the closure of the mints, and again by the two famines of 1896–97 and 1899–1900. During the four years, 1901–02 to 1904–05, there were no disturbing influences affecting operations by the public, for the large imports for the dollar coinage were balanced by the exports of the coined dollars, and the average annual value during this period of the net imports, which amounted to £4,600,000, was probably fairly representative of what is required for industrial purposes, as silver for the rupee coinage is imported direct by the Government. In 1905–06 there was no coinage of dollars, and in their place only 50-cent pieces of the value of £24,384 were exported. In the following year also there was no coinage of either dollars or 50-cent pieces, and dollars of the value of £581 only were exported. In 1907–08 about 2,000,000 dollars were coined in the Bombay mint, of which the amount exported was valued at £190,336. In 1908–09 the number coined was 6,870,741 and the number exported was 6,811,515, valued at £609,048. In 1909–10 the number coined was 5,954,218 and the number exported was 5,946,284, valued at £517,204. Ten-cent and 5-cent pieces, valued at £129,201, were also coined for the first time in the Bombay mint during that year, and the value of the exports of these coins amounted to £122,704. In 1910–11 the number of dollars coined was 5,552,910 and the number exported was 5,147,628, valued at £485,711. The value of 20-cent, 10-cent, and 5-cent pieces coined in 1910–11 amounted to £122,904, and the value of the exports of these coins to £125,345. In 1911–12 the number of dollars coined was 37,470,509, the highest on record, and the number exported was 36,742,478, valued at £3,333,448. There was no coinage of 20-cent pieces in 1911–12, but the value of 10-cent and 5-cent pieces coined in the year amounted to £3,851 and the value of the exports of these coins, including 20-cent pieces, to £5,485. The average annual value of the net imports on private account during these last seven years amounted to nearly £5,500,000. Since the rupee became a token coin, the value of which as bullion is less than its nominal value, the practice of melting down rupees for the manufacture of ornaments and plate has become unprofitable, but the composition of the great existing hoards of silver is still largely a matter of conjecture.

IMPORTS AND EXPORTS OF GOLD.

Up to 1906–7 both the exports and imports of coined gold consisted principally of sovereigns, except that in 1900–1901 nearly one-fifth of the imports consisted of foreign coins. In 1907–8 the value of sovereigns exported amounted to £11,883, while the value of other coins was £44,252. From 1908–9 again, sovereigns have formed the principal item of both the exports and imports, except that in 1911–12 the value of other coins exported slightly exceeded that of sovereigns.

* * * * * * *

The very large exports of gold in the years 1903–4, 1904–5, and 1905–6 were due to the measures taken by the Government to reduce an inconveniently large gold reserve by importing silver for coinage into rupees and paying for the metal by the exportation of gold. In 1904–5, £4,500,000 was thus exported to London for the purchase of silver, and £1,100,000 was also remitted in sovereigns for investment on behalf of the gold standard reserve fund. The exports of gold by Government in 1905–6 amounted to £6,000,000 and included the large additions to the gold standard reserve fund resulting from the heavy coinage of silver. In the following two years there was no export of gold on Government account, but in 1908–9 and 1909–10, £240,400 and £2,000, respectively, were exported. In 1910–11 again, there was no export of gold on Government account, but £5,000 was exported in 1911–12.

* * * * * * *

IMPORTS AND EXPORTS OF SILVER.

The exports of silver consist chiefly of the Government of India rupees, which circulate extensively in Ceylon, Mauritius, Arabia, Zanzibar, the East African coast, the Bahrein Islands, and the ports of the Persian Gulf.

The principal imports of silver are from the United Kingdom and, to a much smaller extent, from Australia and China. During the two years 1903–4 and 1904–5, however, imports from the Straits Settlements for the dollar coinage were four times the value of the imports from Australia. From 1907–8 again, the imports from Australia have exceeded those from the Straits.

ESTIMATED STOCK OF GOLD COIN AND BULLION NOW IN THE COUNTRY.

It is impossible to make any estimate, since statistics of imports and exports previous to 1835–36 are incomplete. That the stock must have been large is certain, for the hoarding of the precious metals has always been a striking characteristic of the people of India. The registration of the imports by quantities began in 1887–88, and from that year to 1911–12 the net imports have been 30,271,466 ounces. No gold ore is imported.

The rupee value of the net imports since 1835–36, converted at the average rate of exchange in each year, is calculated to be £253,184,918. The quantity of gold retained in India is, however, greater than this by the amount produced in the Indian mines, for, although this is all exported, the value of the net imports, as stated above, has been calculated by deducting from the imports of foreign gold the exports of both foreign and Indian gold. The quantity produced since 1885 is 9,686,370 ounces, valued at £36,817,514. There is no record of the production for earlier years, but it is a negligible quantity.

ESTIMATED STOCK OF SILVER COIN (NATIONAL AND FOREIGN) AND BULLION NOW IN THE COUNTRY.

No foreign coin circulates in British India. The circulation of the coin of the Government of India (rupees) is estimated to have been, before the coinage of 1900–1901, between eighty and ninety millions sterling in value; the coinage of the last 12 years added to the circulation a value of £87,510,000, but during the same period there were net exports of rupees representing a withdrawal from the circulation of about £6,700,000.

There is practically no stock of silver bullion in the country, except the stocks awaiting sale in the hands of importers and dealers and such quantities (which are probably small) as may be buried in hoards. Until the closure of the mints in June, 1893, most of the bullion imported was passed through the mints, and since then the metal imported is largely and without delay manufactured into ornaments, a small proportion being passed into the mints of the native States. Since 1893, when the British India mints were closed to free coinage, most of the native rupees in several States have been converted in the British mints into British rupees, which have now been adopted as the currency of those States, and consequently the coinage of bullion in the mints of the native States has been reduced to very small dimensions; but in 1904, owing to large operations in Hyderabad, the value of the coinage rose to £587,400, the quantity of silver used being eight times as great as in 1903 and two and a half times the average quantity of the preceding 10 years. In 1905 the figure fell to £435,052, but in 1906 the value of the coinage in Hyderabad alone rose to £1,258,235, which is more than double the value in 1904. The value of the coinage in all other States amounted to £12,799 only. In 1907 the value of the coinage in Hyderabad was £253,014 and that in the other States £13,901. In 1908 the value of the entire coinage in the native States amounted to only £14,047, but in 1909 it had arisen to £56,719, falling again to only £6,937 in 1910. In 1911 the figure stood at £14,673.

NOTE.—Where the values have been stated in sterling they represent the market value at the time converted at the rate of 15 rupees to £1 sterling. One rupee=16 annas=192 pies.

CURRENCY AND GOLD STANDARD RESERVES.

Rupee reserves are held partly in the currency reserves, partly in the gold standard reserve. In December, 1912, the amounts were approximately as follows:

Currency reserve [1]	£10,000,000
Gold standard reserve	3,750,000
Total	13,750,000

Sterling reserves are held partly in the currency reserve, partly in the gold standard reserve, and partly in the London cash balances. The forms in which they are held are gold (in the currency reserve, both in India and London, and to a small extent in the gold standard reserve), money lent at short notice (in the gold standard reserve and in the cash balances), and sterling securities (in the currency reserve and in the gold standard reserve). In December, 1912, the amounts were approximately as follows:

Gold:	
Currency reserve in India	£17,500,000
Currency reserve in London	7,250,000
Gold standard reserve in London	250,000
Total	25,000,000
Money at short notice:	
Gold standard reserve in London	1,000,000
Cash balances in London	7,500,000
Total	8,500,000
Sterling securities:	
Currency reserve	2,500,000
Gold standard reserve	16,000,000
Total	18,500,000
Aggregate sterling resources:	
Gold	25,000,000
Money at short notice	8,500,000
Securities	18,500,000
Total	52,000,000

TOTAL ABSORPTION OF CURRENCY.

[From Report on the Operations of the Currency Department, etc., of India for the year 1912–13.]

* * * * * * *

Tender of imported sovereigns at the currency office.—According to the table "Balance of foreign trade, etc.," the net imports of sovereigns on private account in the year under report amounted to 26.43 crores. Of this amount about 25.15 crores net were tendered into the currency offices in exchange for notes or transfers, and about 1.28 crores absorbed direct without passing through the Government treasuries or currency offices. From 25.15 crores received by Government about 3.58 crores were remitted to England, as already explained in paragraph 8 (light weight), and of the amount so remitted 2.40 crores were again taken into the currency chest in the Bank of England. Thus (21.57+2.40) 23.97 crores were taken as an effective addition to the currency circulation in India.

Gold of the value of about 1.28 lacs not tendered to Government is believed to be either shield sovereigns or yellow sovereigns marked on the reverse with a large "Australia," for which a premium is offered in the bazar. Doubts have been expressed whether such large amounts of shield sovereigns are really procurable. The subject is not of much practical importance, because even if the major portion of the imports not tendered to Government does not represent shield sovereigns especially used for jewelry there is nothing improbable in the assumption that a portion of the imports in current weight sovereigns were directly passed from the banks for use either as currency or as ornaments. The subject of the proportion of shield sovereigns in light-weight coins has, however, been specially examined. There is no doubt that the large imports by the exchange banks contain a few shield sovereigns, for many such have found their way into the mints. In February, 1912, a lac of light-weight sovereigns packed for remittance to England were specially shroffed in the Bombay Mint and 839 shield and 112 yellow-colored Australian sovereigns were found in the consignment. Between March and June, 1912, 20,851 shield sovereigns found in a stock

[1] Including silver bullion in India or in transit.

of light-weight sovereigns of about £1,600,000 were actually separated at the Bombay Mint. These two examinations show a percentage of nearly 1.3. The shields are in such request in the bazar that the exchange banks are prepared to pay Government par value for light-weight coin and also the expenses of shroffing. I am also informed by a well-known bullion merchant in Bombay that Bombay imported £80,000 in shield sovereigns in the year 1912–13. This, I understand, was a special consignment apart from amounts found in large remittances for tender at the currency offices. On the whole, it is not unlikely that shield sovereigns formed a substantial proportion of those not tendered to Government.

The net addition to currency being worked out as above at 24.52 crores, it now remains to distribute this total circulation under the different denominations of currency. This is done in the following table:

[Amounts expressed in lacs of rupees.]

Items.	1909–10	1910–11	1911–12	1912–13	Total.
(1) Silver:					
New rupee coinage (excluding coinage for the gold standard reserve)	.....	.....	.....	12,27	12,27
Increase (−) or decrease (+) in the currency reserve of rupees and bullion	+ 1,84	+ 3,22	+10,66	− 1,05	+14,67
Transfer from or to the gold standard reserve	+12,08	+ 90	.....	.....	+12,98
Total silver	+13,92	+ 4,12	+10,66	+11,22	+39,92
(2) Gold:					
Net imports of sovereigns (through currency)	+10,67	+10,88	+25,42	+21,57	+68,54
Increase (−) or decrease (+) in currency reserve of sovereigns in India	− 9,26	+ 2	−14,05	− 6,04	−29,33
Total gold	+ 1,41	+10,90	+11,37	+15,53	+39,21
(3) Increase in the circulation of currency notes	+ 8,92	+ 58	+ 6,37	+ 7,61	+23,48
(4) Increase (−) or decrease (+) in treasury balance	− 3,09	− 1,91	+ 1,91	− 9,84	−12,93
Grand total currency demands	+21,16	+13,69	+30,31	+24,52	+89,68

Distributing the increase or decrease in treasury balances among the different denominations of currency the total absorption of each denomination is worked out as follows:

[Amounts expressed in lacs of rupees.]

Items.	1909–10	1910–11	1911–12	1912–13
Gold	1,16	10,78	11,40	15,37
Silver (rupees and half rupees)	13,22	3,34	11,54	10,49
Currency notes	7,28	−83	7,56	6
Bank and other balances	−50	40	−19	−1,40
Total	21,16	13,69	30,31	24,52

These figures show that there was a steady increase in the absorption of gold in the country. The issues of rupees were less than those of 1911–12 in spite of the abnormal demands for jute.

GENERAL CONCLUSION.

It is now possible to indicate generally the use which is made of the sovereign in India at the present moment, and the task is made more easy by the fact that all the evidence is in accord with the conclusions to be arrived at by theoretical reasoning. In the first place there is a large mass of population who never enter into any transaction involving a receipt or expenditure of Rs. 15. To that class the sovereign will never penetrate. As regards the other classes, the use made of the sovereign varies considerably in various provinces, as has been already indicated. But the following general conclusions seem to be permissible. Take the trading community. They are well aware of the intrinsic value of the sovereign, and even though they might not be able to get rid of one readily in local trade transactions, they would probably accept a sovereign if offered in the course of business. One can now say more than this.

In every town of importance in India, except in a few outlying districts, the sovereign can be used in retail transactions.

Then there are the comparatively well-to-do people. The sovereign is entering more and more into their ceremonial life, as, e. g., for presents at marriage ceremonies. They are finding that the sovereign is a very convenient and portable form of value. Hence its use on journeys and pilgrimages and for remittance purposes is increasing. Its use in retail transactions has already been discussed. These people know that Government accepts the sovereign readily, so small payments to Government are often made in this medium. There can be no doubt that sovereigns pass into hoards to some extent. Local custom as regards their use for ornaments seems to vary considerably in various parts of India. As was to be expected, Government servants, pensioners, and other payees have taken the lead in the acceptance of sovereigns.

Finally, we come to the most important portion of the Indian population, the agricultural community. The variations from province to province of the absorption of gold are due very largely to the use of the sovereign by this community. Every large expansion of such absorption has been due to an increased use of gold in the purchase of crops, and has thus been the direct outcome of the initiative of the wholesale purchaser. It is to the latter, more than to any other, class that the extended use of gold is due. And so far experience has shown that an attempt to use gold in such purchases, if persevered with, has always succeeded. There is even a strong volume of evidence that in parts of the Punjab the sovereign is preferred to the rupee, and a purchaser offering gold has an advantage over one offering silver. The use of gold in the purchase of crops is now preeminent in the wheat trade in the Punjab; it is large and increasing in the cotton trade of Bombay and the cotton and spring crops in northern India, and it has obtained a footing in the west of the Madras Presidency. It has at last touched the rice trade in Burma.

In view of statements (in a prior paragraph) it is clear that gold has fairly free circulation in parts of the Punjab and, to a smaller extent, in parts of Bombay and the United Provinces. I mean by this that there are many sovereigns which pass through a fair number of hands and are used as a medium of exchange in many transactions before they return to treasuries or pass into hoards. Giving "circulation" the wider meaning, which neglects to take into account the number of exchange transactions performed by each coin during circulation. Statement VI–A indicates a considerable and increasing volume of gold circulation except in Bengal (outside Calcutta), Assam, Bihar, and Orissa, and Burma.

It must not be thought that every sovereign which is absorbed is hoarded or melted down. A very large sum of money is in actual use in India. Banks have cash reserves, traders have till money, private persons have their petty cash. There can be no doubt that sovereigns now form some, and an increasing, portion of this daily balance of cash in hand; and sovereigns so in use certainly must not be regarded as hoarded. Again a certain amount of gold must leave India in the pockets of travelers.

It is not for me to discuss whether a gold currency is necessary for the maintenance of exchange. But the conclusion must be drawn from these figures and accumulated opinions that the sovereign really has entered into the economic life of India. The withdrawal of the sovereign would now be viewed with disfavor by many, to whom currency controversies are unknown, who yet realize that this coin is superior to any other.

Financial Troubles in India.

[Official dispatch from Henry D. Baker, American Consul.]

Sir: I have the honor to state that a serious financial crisis has lately overtaken important native business interests in India. Some of the largest native banks have been obliged to go into liquidation, causing severe losses to many native firms and to thousands of people generally and creating a general atmosphere of business depression throughout this Empire, and especially in Bombay, where two of the largest native banks in India have failed (the Credit Bank of India, and the Indian Specie Bank). The present banking troubles are confined entirely to the native banks, and although there has been a run on one well-known English bank in Bombay, yet up to the present time none of the English or foreign banks have become involved in the failures, and they will probably emerge from the crisis with their credit and prestige much strengthened.

The failures of these Indian banks have in nearly every instance revealed a scandalous state of affairs, their managers and directors having evidently been responsible for the troubles of their institutions by reason of their own personal speculations and embezzlements. Some of these banks have apparently been in a real state of insolvency for some time past, but by false statements and careless or dishonest audits

their true condition has been kept from the public until they were forced to go into liquidation by reason of the runs made on them; moreover, in several instances the dividends were found to have been paid not out of earnings but out of capital or funds on deposit. The present crisis is an extremely severe blow to what is known as the "swadeshi" banking and industrial movement in India, the term "swadeshi" meaning indigenous, or pertaining to the home or mother country of India, and suggestive of the idea of "India for the Indians," thus appealing to those native elements which have felt that the business and industrial affairs of their country should be controlled by natives and for local rather than for foreign profit.

The present troubles started in September, 1913, with the failure of the People's Bank at Amritsar, which precipitated a run upon other native banks which some of them were unable to meet, causing further lack of confidence in the position of native banks generally. In October the Credit Bank of India at Bombay was obliged to close its doors, just as it seemed as if the panic was about to be allayed. The failure of this important institution created a panic in the share market of Bombay, as the managing director of this bank and some of his friends have been found heavily involved in speculations which had resulted disastrously. The shares of Bombay cotton mills and other important local industrial enterprises experienced drastic declines; moreover, the local piece-goods and cotton markets, also the markets for pearls, became extremely dull, and an atmosphere of anxious uncertainty was created in all the commercial centers of India, but especially at Bombay. There was also heavy selling for Indian account in the silver market at London, which created further disturbing rumors to the effect that several important native banks had been meeting with severe losses through their support of a syndicate which had been attempting to corner silver, and also by large loans to pearl merchants who had apparently been placed in an insolvent condition by declines in the pearl market.

The situation however, was again taking a turn for the better, and official government statements to the effect that reasonable assistance would be given to worthy institutions was causing some revival of confidence, when on about the 20th of November a petition was filed by a small shareholder in the Indian Specie Bank at Bombay for the winding up of this bank. The petition was voluntarily withdrawn about four days later by the petitioner himself, whose shares were purchased by the bank's directors at the price he asked, but in the meantime the court proceedings which had already been instituted caused admission of certain irregularities, which led to a general suspicion that the bank was practically insolvent. During the five days subsequent to the withdrawal of this petition funds amounting to nearly $500,000 were withdrawn from deposit account at this bank; in fact, almost everyone entitled to draw money from this bank did so, including even the directors and shareholders themselves. On the night of December 5 it was realized that only about $20,000 remained as a cash balance in the bank to meet probable withdrawals during the next day of about $50,000.

On the morning of December 6, an immense sensation was created in Bombay by the news that Mr. Chunilal D. Saraiya, the managing director of the Indian Specie Bank, had suddenly died from an illness which was certified by three native doctors to have been due to natural causes. Mr. Saraiya had been known as the "father of swadeshi banking," and was considered the greatest native financier in India, and also had an international reputation as the "silver king," owing to his more or less successful efforts in the past to corner the silver market, and to compel the Indian Government to pay his own prices for silver bullion for currency purposes. The Times of India, in an editorial article on the death of Mr. Saraiya, mentions that: "The skill with which he organized his great silver deals and bore the heavy burden they entailed with an unruffled mien, the boldness of his operations, the rapidity and daring with which he worked, belonged to the sphere of American finance rather than to anything which we are accustomed to associate with the conservative East."

Within three hours after the death of Mr. Saraiya, his body was consigned to the funeral pyre, so that the prevailing suspicion that he had committed suicide was incapable of being verified. In the meantime, the cremation of his body had scarcely occurred before the directors of the banks were in court with the petition for the compulsory winding up of the bank, and the same interests which only five days previously had been most vehement in their protestations against such a course now vied with each other in their desire to close the bank at once.

The judge in granting this second petition for the winding up of the Indian Specie Bank after a further provisional investigation had been made into its affairs, stated that it had been found that the loss already sustained by the bank in silver speculations amounted to $2,625,820, while there was a further anticipated loss of about $1,000,000. The judge further said:

"In the investigation in the affairs of the bank the directors will have to meet some very serious allegations made against them or some of them. They are all men of respectability, some of them occupying high positions in social and financial circles, and it may be that they will be able to meet the allegations made against them successfully and clear themselves from all aspersions that are cast upon them now. But it seems to me that having regard to the colossal speculations in silver alone by the bank for a prolonged period, having regard also to the immense sums of money lost in those speculations, and having regard to the fact that it was a matter of common notoriety that the Specie Bank was cornering silver, it would be a question for the court to consider, when the question arises, if the directors were ignorant of these facts during the whole time or whether they actively sanctioned or passively connived at the managing director's transactions and if they incurred any, and if so what, responsibility in respect of these and other losses of the bank."

It was also found that the Indian Specie Bank had made advances on approximately $2,000,000 worth of pearls, which probably could not be sold under present market conditions for more than about 75 per cent of the amount of such advances.

The announcement of the failure of the Indian Specie Bank caused severe demoralization in the silver markets of the world and within one day the Bombay silver market showed a decline of about 1½ per cent, while American quotations for silver were reported to have dropped 1 per cent. There was subsequently, however, a recovery in value of most of such loss, owing to a report that the bank's entire unrealized stock in London, both in actual silver and in the form of contracts for forward delivery, had been acquired by a powerful London syndicate made up apparently of important interests which already controlled a great deal of silver, the market for which it now seemed necessary to support.

The collapse of the Indian Specie Bank has much further accentuated the condition of business depression in India. Notwithstanding the present holiday season, when business ought normally to be especially brisk, there seemed to be reports from all parts of India, but especially in Bombay, of trade falling off, and of merchants having their money tied up in goods they could not sell. One leading newspaper proprietor informs me that many of his advertising contracts have been suddenly canceled, and that his usually very profitable newspaper now scarcely pays expenses. The effect on various native enterprises which have made use of money borrowed from native banks will undoubtedly prove very serious. Conditions in Bombay are at present very similar to what they were in 1865 and 1866, at the time of the failure of many banks and firms which became involved in the disastrous collapse of local speculation in cotton which followed the end of the American Civil War, when Indian cotton was suddenly deprived of the profitable monopoly which it had temporarily enjoyed.

The banks which up to the present date (Dec. 11, 1913) have failed in India are as follows: The People's Bank of India, Lahore, India; the Credit Bank of India (Ltd.), Bombay, India; the Indian Specie Bank, Bombay, India; Amritsar Bank, Amritsar, India; Kathiawar & Ahmedabad Banking Co., Ahmedabad, India; Bombay Banking Co., Bombay, India; Hindustan Bank, Karachi, India; Lahore Bank (Ltd.), Lahore, India; Pioneers Bank (Ltd.), Bombay, India.

Most of the above banks have had many branches in various parts of India, so that the distress created by their failures has by no means been purely local.

Such a rude shock has been given to confidence in India, in the native or Swadeshi banks, that even those which have probably been honestly and efficiently managed are likely to find it difficult to continue business in the future. There seems to be a general impression at present that practically all the banks which have failed were operated on lines which would not have been considered sound, ethical, or honest according to western ideas, and in fact that they were being run chiefly for the personal profit of their managers and directors, regardless of their responsibilities to depositors and shareholders. The present discredit of the "Swadeshi" banks will, it is feared, have far-reaching consequences in causing the native population to hoard their money even more than they have done in the past. From an international economic standpoint it has often been pointed out as being unfortunate that India, with its tremendous collective wealth, should have such comparatively little capital available for its industrial and commercial development, and that this Empire is constantly absorbing largely of gold from the world's supply and either hoarding the same in the ground or converting it into jewelry and other articles of personal display. The "Swadeshi" banking movement which has now come to such grief had given promise of making the natives of India more venturesome with their treasure, so that much hoarded wealth could be made use of for the purposes of commerce and industry. Unless, however, the natives of the country should now make greater use of the European banks which have demonstrated their soundness in this crisis,

there seems likely to be a greater tendency than ever for the people of the country to hoard their savings.

The position of the Government of India with reference to this crisis is shown in the following remarks from his excellency the viceroy in a recent address to the Madras Chamber of Commerce:

"The disturbance of credit which originated in the first banking failures in the Punjab has extended in some degree to northern India generally, while in the storm center in Bombay the crisis has already produced calamitous results. I shall not attempt to indicate the causes to which the troubles may be attributed. But I wish to emphasize two points. In the first place, we have felt that in these exceptional conditions the Government of India ought not to take up an attitude of entire aloofness and detachment. We have closely followed the course of events, and where it has been possible and legitimate to do so we have given timely assistance. I am glad to say that there has been no undue disposition to look to Government for help. Such help as we can properly give is limited in extent and necessarily subject to conditions and safeguards. But what we could do has been and will continue to be done. Secondly, I wish to say a word about the future. These failures have inevitably aroused some distrust in Indian banking institutions, and the feeling of disquiet is not likely to be quickly removed. We must all deplore the setback which these events must be expected to give to the tendency which has been so pronounced in recent years for the savings of the people to be increasingly applied in investment and industrial enterprise. In spite of inexperience or recklessness, the movement was sound in itself. Indeed, it is a necessary condition of India's development and prosperity, and I am convinced that it will be maintained in spite of temporary checks. If the Indian investor is taught by these events to be more careful to distinguish between sound and unsound undertakings, or if they pave the way for some better system of regulation and protection, they will not have been unfruitful of beneficent result. Meanwhile, I earnestly hope that the legitimate caution which these misfortunes inspire will not degenerate into unreasoning dismay, the only outcome of which must be to confound the good with the bad and bring heavy loss upon investors and depositors whose money is lodged with some institutions."

There has been a somewhat curious coincidence that only a few days previous to the failure of the People's Bank, which started the present panic, the Government of India should have addressed local governments and chambers of commerce on the important question of banking legislation. It appears to be the present intention of the Government of India to place a restriction on the use of the term "bank" and to allow it to be used only by companies which have been registered under the companies act. There will probably also be in the future some minimum limit with regard to subscribed capital, in order to prevent the establishment of useless and undercapitalized institutions, and also it is likely that all banks will be required to carry proper reserves, and not be allowed to distribute dividends at the risk of depleting necessary reserves. Furthermore, the recent scandals as to the worthless audits of native banks will probably lead to legislation fixing more clearly the duties and responsibilities of auditors in this country.

The present business depression in India seems likely to curtail for some time the volume of foreign imports into this country, as until prosperity is again fully restored the leading local merchants are likely to purchase only such goods as they are sure will not be left unduly long on their hands.

It may be well for American exporters to India who have been dealing directly with native customers to take some extra precautions as to their financial standing, and especially to see that any banking arrangements or guarantees are through well-established European and not native banks.

I have the honor to be, sir, your obedient servant,

HENRY D. BAKER,
American Consul.

BOMBAY, INDIA, *December 11, 1913.*

BRITISH NORTH BORNEO.

SANDAKAN.

1, 2 (*a* and *b*), 3, 4, 5, 6, 9, 10, 11, and 12 (*a* and *b*). None. No mint.

7. Approximate stock of silver coin in the country on December 31, 1912: In public treasuries, $257,000.

8. Government notes outstanding at the end of the year 1912, $727,569.

CEYLON.

1, 2 (*a* and *b*), 4, 5, 6, 10, and 11. None.

* * * * * * *

3. No means in this office to obtain the information regarding the amount of gold and silver used in industrial arts during the calendar year 1912.

7. Approximate stock of gold and silver coin in the country on December 31, 1912:

Description.	In public treasuries.	In banks.	In circulation.
			Rupees.
Gold coin	£200,519	(1)	
Silver coin:	*Rupees.*		
Rupees	8,497,629.00	(1)	
Small silver	133,284.55		[2] 5,946,715.45

[1] No means available in this office for ascertaining this information.
[2] Small silver in circulation exclusive of 133,284.55 rupees belonging to currency reserve and in the pay offices.

8. Government notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Rupees.	*Rupees.*	*Rupees.*
Government notes	23,183,370	6,011,698.77 (£410,776 5s. 6d.)	3,740,464.09

The local banks do not issue notes.

9. There is no premium on gold. The actual currency of the country is as follows: Gold, sovereign (fixed at 15 rupees by a Government proclamation); silver, Indian rupee; silver, subsidiary coins of Ceylon—50-cent piece, 25-cent piece, 10-cent piece; nickel, 5-cent piece; copper, 1-cent piece and ½-cent piece.

12. (*a*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold.		Silver.	
	Coin.	Bullion.	Coin.	Bullion.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*
United Kingdom	574,620	3,870	2,220	341,160
British India	80	300	3,677,190	805
India (excluding British India)			1,140	
Straits Settlements	300	60		
Gibraltar	75			
New South Wales	180,000			
West Australia	2,250,000			
Siam	20			
Turkey in Europe	602			
Total	3,675,776	4,130	3,680,474	341,965

No exports of gold or silver.

CHINA.

CANTON (KWANGTUNG) PROVINCE.

1. No gold coined. Total amount of silver coined in the first year of the China Republic, 1912:

Denomination.	Pieces.	Value.
		Mexican dollars.
20-cents	88,000,000	17,600,000

2 (*a*). Since the 9th moon of the first year of the China Republic (September, 1912) the amount coined by the Canton mint for the Kwangsi Transportation Department was 1,999,737 20-cent pieces, equal to $399,947.40 Mexican currency.

2 (*b*). No.

3, 4, 5, 6, 9, 11, and 12 (*a*). None.

7. Approximate stock of silver coin and bullion in Canton, December 31, 1912:

Stock.	In public treasuries.	In banks.	In circulation.
Silver coin	[1] $1,000,000	[1] $20,000,000	[1] $18,000,000

[1] Mexican currency.

On December 31, 1912, it was estimated that there was a very small amount of bullion on hand at Canton. The amount of silver coins was over $40,000,000 Mexican currency, of which over $1,000,000 was in the Government Treasury, about $20,000,000 in the banks, and the amount on hand in the business firms and in circulation was estimated to be upward of $18,000,000. As the state of affairs in Canton has only just been settled, the means available for investigation are incomplete. Consequently the above figures are only approximate.

8. During 1912 the new notes issued by the Republican Government amounted to $12,391,000, Mexican currency, besides $4,000,000, Mexican currency, for the redemption of old notes, making a total of $16,391,000 new notes in circulation. This amount, of course, does not include the notes issued by the Manchu Government, which, after the redemption of the $4,000,000, as above stated, is said to be about $5,000,000, Mexican currency, still in circulation. Owing to the Government's having suspended the exchange of these notes into silver, the amount of silver coin held in reserve is to be kept secret and can not be disclosed.

10. No laws affecting the currency or banking have yet been enacted by the central government, and as the provincial government is powerless to act in this regard, consequently no such laws are in existence. But in respect to the paper money, the Government as well as the business community are required to accept these notes as a basis of exchange, and native banks are required to transact business without differentiating between paper and silver, and no discount whatever is allowed.

12 (*b*). Canton is the chief center for the importation and exportation of silver. Since 1912, by-laws have been in force prohibiting the exportation of silver, and no coins were supposed to have been exported during that year. Of course, some were doubtless smuggled, but the amount was not large. No bullion was exported. The importation and exportation of ore can not be ascertained until a report is submitted from the maritime customs.

As regards the importation of silver coins, save some Mexican dollars and Hongkong small coin, there was practically none. In respect to the amount of bullion imported, the amount purchased and imported by the commissioner of finance was taels 7,214,921–4–7, and the amount purchased by the Kwangsi Government was less than taels 1,000,000.

Chefoo Province.

1, 2 (*a* and *b*), 3, 4, and 5. None (no mint).

* * * * * * *

7. Approximate stock of silver coin and bullion in the Province on December 31, 1912:

Classification.	In banks.	In circulation.
	Chefoo dollars.	
Silver coin	250,000	[1] $100,000
Silver bullion	850,000	[1] 50,000
Total	1,100,000	150,000

[1] Estimated.

There is no public treasury in the Province.

8. Government notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.
Government (semi) issue	$391,000
Government outstanding (estimated)	190,000

Bank notes (nil).

9. Premium on gold during 1912: Highest premium, 52 per cent; lowest premium, 46 per cent; average premium, 49 per cent. The actual currency of the country is silver and copper.

10, 11, and 12 (*a* and *b*). None.

Chungking Province.

1. No gold coined. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Silver (new coinage):		
Dollars	2,886,988	.....
Half dollars	146,916	.....
20 cents	95,950	.....
10 cents	370,561	.....
Total	3,500,415	[1] $2,996,692

[1] Mexican dollars.

2 (*a*), 3, 4, 5, 6; 10 and 11. None.

2 (*b*). The above silver coinage was issued by the mint of the Province of Szechuan, at Chengtu.

7. Approximate stock of gold and silver in the country: Impossible to ascertain.

8. About $13,000,000 (Mexican) in Government notes. Amount of bank notes impossible to determine.

9. No gold standard recognized. Gold sells like any other commodity.

12 (*a*). No movement of gold whatsoever reported.

12 (*b*). Imports and exports of silver during the calendar year 1912:

Year.	Silver coin.		Silver bullion.	
	Imports.	Exports.	Imports.	Exports.
1912 [1]	$1,186	$931	$2,096	$1,326,931

[1] No statistics by countries available.

(Values in United States currency.)

Foochow Province.

Information received from the Fukien Government Bank states that the bank can by no means obtain the data, owing to the lack of development of the enterprises given in your interrogatories. However, it furnishes a special paper containing the information that it could collect (covering question No. 8). I inclose herewith copy of report made by the said bank:

Amount of paper notes issued by Government bank	$400,000 to $500,000
Silver held for redemption, over	200,000
Paper notes issued by all native banks	1,500,000 to 1,600,000
Silver held for redemption	300,000 to 400,000
Silver dollars in circulation	700,000 to 800,000

HANKOW.

1. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
New coinage 1 dollar (Mexican)	.....	[1] $6,837,696
Recoinage 1 dollar (Mexican)	.....	[1] 25,304
Total	6,863,000	[1] 6,863,000

[1] Mexican dollars.

2 (*a* and *b*), 4, 5, 6, 7, 8, 10, 11, and 12 (*a* and *b*). None. No statistics available.

9. Premium on gold during 1912: Highest rate, $2.36 Mexican; lowest rate, $2.08 Mexican; average rate, $2.22 Mexican. The actual currency of the country is Mexican dollars, valued from 40 to 55 cents United States gold, but value always fluctuating.

(This office has been in close correspondence with the Chinese authorities for months to obtain the few statistics contained in this report; in most cases, the officials can not answer the questions asked, and practically no statistics are ever kept by the Chinese.)

HONGKONG.

1, 2 (*a*), 3, 4, 5, 6, 10, 11, and 12 (*a*). None.

2 (*b*). "Of the total British dollars (silver) coined at the Bombay (India) mint, a good deal goes to Tientsin and northern China for circulation there."

7. Approximate stock of gold and silver coin and bullion in the Province on December 31, 1912:

Classification.	In banks.	In circulation.
Gold coin	[1] $1,172,000.00	.....
Gold bullion	225,000.00	.....
Silver coin	[2] 5,002,042.81	$36,992,370
Silver bullion	[3] 500,000.00	.....
Total	6,899,042.81	36,992,370

[1] In addition, the following: Gold sovereigns, 4,133; double eagles, 3; Netherlands gold florins, 30.
[2] Silver coin and silver bullion, 19,000,000 ounces; silver bullion, 50,297 ounces.
[3] Approximate circulation (approximate amount of Hongkong silver and copper subsidiary coins, 50, 20, 10, and 5 cent pieces, and 1 cent and mil pieces, put into circulation) $43,999,830
Amount withdrawn from circulation and sold as bullion 7,007,460
Balance approximately in circulation 36,992,370

Values in Mexican dollars.

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Legal-tender silver holdings.
Banks of issue	[1] $25,610,211	[2] $20,080,000

[1] Hongkong currency. [2] Specie in reserve.

9. The actual currency of the country is silver.

12 (*b*). "Refer to Shanghai for total of silver imported from America, and refer to San Francisco for total silver export to China. The difference between these two amounts is chiefly accounted for imports of American silver in Hongkong, although a small portion has been continued to India."

HUPEH GOVERNMENT MINT.

1. No gold coinage was executed at the mint.

Silver dollars were coined at the Hupeh Government mint in 1912 to the amount of $6,863,000; each dollar being equal to 7 mace 2 candareens of Yangli sycee silver. The total amounts to 4,941,360 taels.

The amount of recoinage is not stated separately, the above figures including both recoinage and coinage from bullion.

No subsidiary silver currency was coined in 1912, as there is little demand for it in this market.

Copper coins minted came to 468,356,000 1-cent pieces, known as 10-cash pieces, each weighing 2 mace. At the average exchange of 130 coppers to 1 local dollar this would be equal to $360,274 silver. Many of these coins were made of copper secured by melting down old and useless cannon. They were used to redeem the notes of the Hupeh Government bank.

2 (*a* and *b*). No coinage was executed at other mints for this Government, and no coinage was executed for other Provinces or countries at this mint in 1912.

* * * * * * *

4 and 5. No gold or silver in the form of plate, jewelry, or other old material was used at the mint for coinage, pure sycee only being used.

* * * * * * *

7. (No reply.)

8. It is stated that the notes of the Government bank are secured by the houses and lands at Wuchang and Hankow belonging to the said bank. The commissioner of foreign affairs states that this security is probably equal to the amount of the notes outstanding. The cash notes have until recently been at par. The dollar notes have been qouted on the street ordinarily at 110 coppers, which means a discount of about 15 per cent, as the silver dollar brings usually 130 coppers. The coin reserve is therefore obviously insufficient or nonexistent. There being little demand for the dollar notes they tend to be quoted lower, and less importance is attached to keeping them at par than in the case of the cash notes.

No further information has been obtained regarding note issues.

NANKING.

1. No gold coined. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Silver (new coinage):		
One dollar	23,615,000	$23,615,000
Twenty cents	133,000	26,600
Total	23,748,000	[1] 23,641,600

[1] The silver bullion used was entirely of native origin. The dragon dollar coined at Nanking and elsewhere is approximately the same weight and fineness as the Mexican dollar.

2 (*a* and *b*), 3, 5, 7, 8, 10, 11, and 12 (*a* and *b*). None.

4. The Nanking mint has received from Yunnan and Shensi 485,000 ounces of silver bullion this year (1912).

* * * * * * *

9. There is a premium on gold. The actual currency of the country is copper cash.

NEWCHWANG PROVINCE.

1, 2 (*a* and *b*), 3, 4, 5, 6, 10, and 11. None.

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Classification.	In banks.	In circulation.
Gold coin	$400	.....
Gold bullion	.....	.....
Silver coin	460,000	$260,000
Silver bullion	51,000	44,100
Total	511,400	304,100

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	$174,800	(1)	(1)
Banks of issue	510,000	(1)	(1)
Total	684,800		

[1] Reserve held at Home Offices of Yokohama Specie Bank and Russo-Asiatic Bank.

9. Premium on gold during 1912: Highest premium, 52⅝ per cent; lowest premium, 44 per cent; average premium, 48 per cent. The actual currency of the country is Mexican dollars; Haikwan and Newchwang taels.

12 (*a*). Imports and exports of gold during 1912. None.

12 (*b*). Imports and exports of silver during the calendar year 1912:

Country.	Coin.		Bullion.	
	Imports.	Exports.	Imports.	Exports.
Chinese ports	$60,130	$473,830	$413,670	$247,790

MUKDEN.

1. Gold coinage during the calendar year 1912. None. Silver coinage as follows:

Denomination.	Number.
20-cent pieces	22,227,540

2 (*a* and *b*), 4, 5, 9, 10, and 11. None.

* * * * * * *

7. Approximate stock of gold and silver in the country on December 31, 1912:

Classification.	In circulation.[1]
	Sycee dollars.[2]
Gold coin	
Gold bullion	
Silver coin	[3] 17,182,968
Silver bullion	
Total	17,182,968

[1] In Fengtien Province.
[2] Sycee dollar equals United States $0.40.
[3] Includes stock in public treasury and in banks.

8. Government and bank notes outstanding at the end of the year 1912:

[In Fengtien Province.]

Notes.	Notes outstanding.	Legal-tender silver holdings.
Provincial government bank	[1] 10,415,045 [2] 10,000 [3] 200,000	[3] 4,353,926
Bank of Agriculture	[1] 150,000	[1] 300,000
Total	10,775,045	4,653,926

[1] Sycee dollars. [2] Mexican dollars. [3] Mukden taels. ($1=United States $0.65.)
Information for other banks unobtainable.

12 (*a*). Exports of gold (Manchuria) during the calendar year 1912:

Classification.	Country.	Exports.
Gold bullion and ore	Korea	*Haikwan taels*.[1] 5,446

[1] Customs taels. ($1=United States $0.716.)

12 (*b*). Imports and exports of silver (Manchuria) during the calendar year 1912:

Country.	Silver coin.		Silver bullion.	
	Imports.	Exports.	Imports.	Exports.
	Haikwan taels.[1]	*Haikwan taels*.[1]	*Haikwan taels*.[1]	*Haikwan taels*.[1]
China	1,067,742	3,889,673	4,534,764	1,245,124
Japan	64,000	47,900	.....	.....
Korea	10,536	64,886	2,171	70,017
Total	1,142,278	4,002,459	4,536,935	1,315,141

[1] Customs taels.

PEKING.

1. No gold coined. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Silver (new coinage):		
Dollars	43,917,349	.....
20 cents	110,361,140	.....
Total	154,278,489	[1] $32,548,010

[1] United States dollars.

NOTE.—Partial report. Four mints reported: Mukden, Tientsin, Nanking, and Canton.

2 (*a* and *b*), 3, 4, 6, and 11. None.

5. Amount of United States gold coin imported during 1912: $9,375. None melted at mints.

7. Stock of gold and silver coin and bullion in the country on December 31, 1912: Unknown.

8. Government and bank notes outstanding at the end of the year 1912:

Items.	Notes outstanding.
Government	[1] $55,081,922
Banks of issue	[1] 10,043,383
Total	[1] 65,125,305

[1] Value in United States dollars.

NOTE.—These figures are not complete; it has been impossible to obtain reports from some of the provinces. Eleven out of 22 have reported, but these are the most important. $75,000,000 may cover all. The paper currency issued by many of the provinces during the revolution is at a discount, varying from 10 to 30 per cent. The amount of this currency is stated only approximately.

9. No gold currency. Actual currency is copper, silver, and paper.

10. Attempt has been made to organize a bank of China to take the place of the former Ta Ch'ing Bank—the Imperial Government Bank—but the Government has

not been able to supply its portion of the capital. A copy of the regulations of the new bank is inclosed.

12 (*a*). Imports and exports of gold and silver during the calendar year 1912:

DRAFT LAW FOR UNIFICATION OF SILVER COINAGE.

[Extract from the Peking Daily News, Nov. 19, 1913.]

The following draft is drawn up by Mr. Hsu Un-yuan, acting director of the audit department, who was one of the three members on the currency reform commission, specially appointed by a presidential order dated February 20. The Government has decided upon the adoption of the silver standard. Mr. Hsu, who is himself a strong advocate of the silver standard, makes it the basis of his scheme for the unification of the national coinage. We learn that the general outline of the scheme which the Government will adopt is similar to what is recommended by Mr. Hsu.—Ed.

ARTICLE 1. The unit of the national coin of the Chinese Republic will be called the huan.

NOTE.—In olden times the currency system in China was called "huan-fa." In the past we have been accustomed to call the dollar yuan. This word is also used by Japan. In order to make a distinction between the currency units of the two countries, we adopt the ancient name huan as the name for our unit. The various countries which join the Latin Coinage Association observe the same standard as regards weight and fineness, but the names by which their standard coins are designated are different from each other.

ARTICLE 2. The total weight of the unit shall be 55 candareens Kuping weight, or 20 grammes.

NOTE.—The principal cause responsible for the confusion in our currency system is the lack of fixed value of the standard and token coins. One necessary step in the reform is to arrange the values of the coins so as to render possible the introduction of decimal progression, which will greatly facilitate the unification of the currency system.

The 72-candareen silver dollar now in circulation is approximately equivalent to 1,300 cash or 130 coppers, which is a very irregular and inconvenient number. It is impossible to introduce decimal progression with this number, and if it is forcibly done, there will be ample ground for the playing of tricks, and the State will suffer from it.

The silver dollar is in circulation in the prosperous trading ports, but in inland towns the cash is the principal medium of exchange. The cash has thousands of years of history behind it. In examining our ancient history we find that only the cash was profusely alluded to in connection with the currency of this country. It is therefore quite true to say that the history of the currency system in China is the history of the cash. In reforming the currency system the traditions of the country and the customs of the people must be seriously considered. We must not neglect the problem of the cash in reaching a decision upon the weight of the unit.

As the 72-candareen dollar is now approximately equivalent to 1,300 cash, then the 55-candareen dollar will be approximately equivalent to 1,000 cash, which is a num-

ber at once regular, convenient, and possible of decimal progression. The relative value between silver and the cash will not be altered. The people will be in possession of a dollar whose value is not too high for daily transactions. It will not tend to force up the standard of living.

The 72-candareen dollar is of too high a value to be suitable to the people and it invites irregularity. Some persons contend that the 72-candareen dollar is to be preferred because to change it to 55 candareens will occasion a disturbance on the market. But I assure them that this disturbance will be no greater than that which will be occasioned by the enforcing of a fixed class of the 72-candareen dollar. For we all know the different Provinces are using different classes of dollars, and the rejection of the dollar from a neighboring Province by the bankers has become almost an unbreakable custom. The Peking dollar will not be tolerated in Shanghai. The Shantung bankers profess that they will acept all classes of dollars. But while accepting the Hupeh dollar at its normal value, the Shantung bankers will depreciate the Peiyang (northern) dollar. It will be very difficult to compel the bankers to accept all classes of the 72-candareen dollar without discrimination.

Dr. Vissering, adviser to the Chinese Government on currency, is also of the view that the change of the unit to a lesser value will be of great benefit and utility to the Chinese people. This proposal is generally endorsed by the foreign banks in China. The currency loan will be the means of effecting the currency reform. The views of the foreign bankers should also be considered.

To introduce by force decimal progression with the 72-candareen dollar will be a source of great danger. This act will encourage speculation. A dollar is now worth as much as 1,320. If its value is forced down to 1,000, the laboring and other classes will suffer acutely, as the dollar will be depreciated by one-fourth of its usual value, and there is no prospect of lowering the price of the necessary commodities.

Therefore the adoption of the 55-candareen unit is the most reasonable way of effecting the unification of national coinage.

ARTICLE 3. The fineness of the new unit "huan" shall be 90 per cent.

NOTE.—In foreign countries the fineness of the standard coin is usually 90 per cent. The "fuan" shall consist of an alloy with 90 per cent silver and the remaining part copper.

ARTICLE 4. The huan shall be divided into 100 feng or cent; each feng shall be divided into 10 li.

ARTICLE 5. The national coinage shall consist of the following classes:

A. The standard coin. There shall be one kind of standard coin, the huan, which is the unit of the national currency.

B. The token coin. There shall be three kinds of token coin: Silver, nickel, and copper.

1. The silver token coin is subdivided into two kinds: 50 feng and 20 feng.

2. The nickel token coin is subdivided into two kinds: 10 feng and 5 feng.

3. The copper token coin is subdivided into two kinds: 1 feng and 1 li. One li shall be of the same value as the cash now in current use.

ARTICLE 6. The following limit shall be placed on the use of the various kinds of coins:

A. There is no restriction to the use of the standard coin.

B. The amount of silver token coin involved in one transaction shall not exceed 10 huan.

C. The amount of nickel token coin involved in one transaction shall not exceed 5 huan.

D. The amount of copper token coin involved in one transaction shall not exceed 1 huan.

But the above rules do not apply when respectable banks and firms or trustworthy merchants take the token coins to the Bank of China and change them for standard coins.

ARTICLE 7. The designs of the coins shall be as follows:

A. The standard coin. On one face of the huan shall be inscribed the national flag and four words: "Standard coin, one huan." On the other side shall be engraved the picture of the President, and the date when the dollar is minted.

B. The design of the silver and nickel token coins shall be similar to that of the standard coin.

C. The design of the copper token coin shall be described by separate regulations.

ARTICLE 8. The mint remedy is specified as follows:

A. The difference between the weight of the standard and token coins turned out by the mint and that of the legal tender shall not exceed 3/1000.

B. The difference between the fineness of the standard and token coins turned out by the mint and that of the legal tender shall not exceed 3/1000.

ARTICLE 9. The wear and tear of coins shall be regulated as follows:

When on account of wear and tear the standard coin loses 1 per cent of its legal weight, it may be exchanged at the Bank of China for a new coin.

When on account of wear and tear, the token coin loses 5 per cent of its legal weight, it may be exchanged at the Bank of China for a new coin.

ARTICLE 10. The weight and fineness of token coins shall be specified in another set of regulations.

SHANGHAI.

1, 2 (*a* and *b*). There are no mints in operation in the Shanghai consular district.

* * * * * * *

4 and 5. None.

6. No mines in the Shanghai consular district.

7. Approximate stock of silver coin and bullion in Shanghai on December 31, 1912:

Classification.	In banks.
Gold coin	[1]
Gold bullion	[1]
Silver coin	$6,810,000 Mexican ($3,336,900 United States).
Silver bullion	24,822,000 Shanghai taels ($816,779,672 United States).

[1] Inconsiderable.

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.
Chinese Government supported banks	[1] $1,388,487
Banks of issue (foreign)	[1] 3,601,847
Total	4,990,334

[1] United States currency.

9. Premium on gold during 1912: Highest premium, $1=Shanghai tael 1.656; lowest premium, $1=Shanghai tael 1.429; average premium, $1=Shanghai tael 1.49 (approximately).

10 and 11. None.

12 (*a*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold.				Silver.			
	Imports.		Exports.		Imports.		Exports.	
	Coin.	Bars, dust, etc.	Coin.	Bars, dust, etc.	Coin.	Bars and sycee.	Coin.	Bars and sycee.

Europe	.....	.....	.....	$925,279	.....	7,632,844	$5,929	$6,044,602
Vladivostok	.....	.....	1,146	.....	.....	.....	.....	.....
India, including Burma	.....	.....	.....	.....	.....	1,644,198	.....	261,225
Straits Settlements	$22,379	.....	.....	.....	.....	.....	.....	12,015
Korea	.....	.....	.....	.....	6,416	.....	.....	.....
Hongkong and Macao	129,903	.....	1,205	337,015	1,988,502	1,156,665	1,375,932	863,134
Japan, including Formosa	6,280,374	23,833	2,282	18,375	618,298	240,947	.....	352,876
Total	6,432,656	118,356	5,112	1,280,669	2,615,427	14,045,015	1,381,861	7,533,852

NOTE.—Reduction from Haikwan taels made at 0.715 the average United States Government rate for 1912.

SWATOW.

1, 2, (*a* and *b*), 4, 5, 6, 10, and 11. None.

* * * * * * *

7. Approximate stock of silver coin in the province on December 31, 1912:

Classification.	In banks.	In circulation.
Silver coin	[1] $600,000	[1] $50,000

[1] United States currency.

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Legal-tender silver holdings.
Government	[1] $50,000	.....
Banks of issue	[1] 750,000	[1] $200,000
Total	800,000	200,000

[1] United States currency.

Government notes outstanding consist of provincial military notes, against which no treasure is held. "Banks of issue" notes are those issued by Chinese banks in Swatow. One bank in Chaochowfu and one in Chenghai are said to issue notes in small quantities, but speaking generally bank notes are current only in Swatow, not in interior points. "Banks of issue" notes outstanding do not include those issued by the Bank of Taiwan, a Japanese bank, and the only foreign bank in Swatow. This bank refused to give any information and it is impossible to secure any accurate estimate of its local note issue or reserve. It is believed, however, that the local issue and local reserve are probably included in the totals supplied from Japan, the head office of this bank being in Formosa.

9. Premium on gold during 1912: Highest exchange, 515 per cent; lowest exchange, 46⅛ per cent; average exchange, 495 per cent.

The actual currency of the country is Mexican (i. e. Trade) dollars.

12 (*a*). The customs returns do not show any imports of gold, but there is a limited quantity imported from abroad, chiefly Siam, Straits Settlements, and other southern points, by returning emigrants, in the form of rings, bracelets, etc., of fine gold.

12 (*b*). Imports and exports of silver during the calendar year 1912:

Country.	Imports.		Exports.	
	Coin.	Bullion.	Coin.	Bullion.
Hongkong	$324,958	$49,200	$2,900,143	$1,786
Siam	.....	.....	219,874	.....
Japan and Formosa	.....	.....	27,552	.....
Netherlands India	.....	.....	9,033	.....
Chinese coast ports	336,695	7,085	1,135,171	.....
Total	661,653	56,285	4,291,773	1,786

TIENTSIN.

1. No gold coined. Amount of silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
Silver (new coinage) dollars	10,304,340	[1] $4,801,822

[1] United States currency.

2 (*a* and *b*), 10, and 11. None.

3, 4, and 6. No data available.

5. United States gold coin imported for United States troops in Tientsin, China, $210,800.

7. Approximate stock of gold and silver coin and bullion in the Province on December 31, 1912:

Classification.	In public treasuries.	In banks.	In circulation.
Gold coin	[1]	[1]	[1]
Gold bullion	[1]	[1]	.....
Silver coin	[1]	[2] $1,710,000	[1]
Silver bullion	[1]	3,580,000	.....
Total	.....	5,290,000	.....

[1] No data. [2] Foreign coin.

8. Government and bank notes outstanding at the end of the year 1912:

Notes.	Notes outstanding.	Legal-tender silver holdings.
Government banks	$243,974	[1]
Banks of issue (foreign)	2,974,032	[1]
Total	3,218,006	.....

[1] No data.

9. There is a premium on gold. The actual currency of the country is silver.

12 (*a*). Imports and exports of gold and silver during the calendar year 1912:

Country.	Gold.		Silver.			
	Imports.	Exports.	Imports.		Exports.	
	Coin.	Bullion.	Coin.	Bullion.	Coin.	Bullion.
Chinese ports	$55,434	.....	$419,576	$6,397,518	$838,360	$1,827,429
Philippine Islands	210,800	.....	.....	.....	.....	.....
Japan	.....	$22,554	.....	.....	.....	.....
Hongkong and Macao	.....	.....	4,643,569	1,432,000	.....	.....
Europe	.....	.....	.....	699,685	.....	.....
Total	266,234	22,554	5,063,145	8,529,203	838,360	1,827,429

NOTE.—The values stated are all in United States currency, except where otherwise indicated, the rates of exchange being as follows: Mexican dollar=46.6 cents United States currency; Tientsin tael=71.6 cents United States currency.

JAPAN.

1. Amount of gold and silver coined during the calendar year 1912:

Denomination.	Pieces.	Value.
		Yen.
Gold:		
20 yen	1,453,000	.....
5 yen	100,000	.....
Total	1,553,000	[1] 29,560,000

KOREA (CHOSEN).

1, 2 (*a* and *b*), 4, 5, 9, and 11, none. No mint in Chosen; Japanese coins are in circulation.

3. No official data available. Industrial arts are in a very undeveloped condition.

* * * * * * *

7. Approximate stock of gold and silver coin and bullion in the country on December 31, 1912:

Items.	In public treasuries.	In banks.	In circulation.
Gold coin	.....	$994,806	$1,825
Gold bullion	.....	889,857	.....
Silver coin	$313,348	38,728	3,509,480
Total	313,348	1,923,391	3,511,305

8. Bank notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Gold holdings.
Banks of issue	$12,724,099	[1] $4,365,777

[1] Including amount of notes issued by Bank of Japan under regulations for Bank of Korea (Chosen). (The only foreign banks now having branches or agencies in Chosen are the Hongkong & Shanghai Banking Corporation and the Chartered Bank of India, Australia, & China, both British corporations.)

10. Laws passed during the year 1912: Bank Ordinance No. 5, of October 24, 1912 (according to law No. 30 of Meiji 44), (1911).

12 (*a* and *b*). The customs authorities report as follows: Imports of specie and bullion, $733,760; exports of specie and bullion, $5,041,867. Official returns do not give all of these details.

The value of the exports of gold and silver from Chosen during 1912, according to the reports of the mining bureau, was as follows: Gold, $4,689,285; silver, $16,000; (gold ore, $136,919).[1]

SIAM.

1, 2 (*a*), 4, 5, 9, 10, and 11. None.

2 (*b*). No gold or silver coinage was executed at foreign mints for this Government, but the following nickel coins were manufactured at the Belgian Royal Mint for Siam during 1912: 5 satangs, 2,000,000 pieces; nominal value 100,000 ticals; 10 satangs, 1,500,000 pieces; nominal value, 150,000 ticals.

[1] From Consul General George H. Scidmore, Seoul, in Daily Consular and Trade Reports, Aug. 21, 1913.

3. No information available regarding the amount of gold and silver used in industrial arts.

* * * * * * *

7. Approximate stock of silver coin and bullion in the country on December 31, 1912:

Classification.	In public treasuries.	In circulation.
	Ticals.	
Silver coin	23,939,099	(1)
Silver bullion	397,661	.....
Total	24,336,760	.....

[1] The silver in circulation used to be estimated at a figure of 100,000,000 ticals, but seeing that 20,000,000 ticals are now held in the paper currency reserve and that no new ticals have been minted for several years, the figure may safely be reduced to 75,000,000 or 80,000,000 ticals.

8. Government notes outstanding at the end of the year 1912:

Item.	Notes outstanding.	Legal-tender silver holdings.
	Ticals.	*Ticals.*
Government notes	28,346,995	20,050,370

Gold and silver entered for export from New Zealand for the year ended December 31, 1912, as follows: Gold, 343,163 ounces, equal to 10,673.81 kilograms, valued at £1,345,115. Silver, 901,165 ounces, equal to 24,919 kilograms, valued at £84,739.

PART II.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION OF THE PRECIOUS METALS IN THE UNITED STATES DURING THE CALENDAR YEAR 1912.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1912.

The official estimate upon the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1912 is estimated to have been $93,451,500 and the production of silver is estimated at 63,766,800 fine ounces.

The output of gold fell $3,438,500 below that of 1911. The entire decrease was more than accounted for by the decline in the State of Nevada, which alone was $4,521,200. This falling off nearly all occurred in the Goldfield district. The production of silver was 3,367,400 ounces higher than in 1911, gains appearing in all the important producing States except Idaho. Utah made the largest increase.

The best prospect, since the opening of the Cripple Creek district in Colorado, for the development of an important new gold-producing district in the United States is believed to now exist in southeastern Alaska, upon an extension of the formation upon which the famous Treadwell mine is located. A steady increase in output from this locality is certain for some years to come and is likely to place it at the head of the gold-producing districts of this country.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

About 29 per cent of the production of Alaska came from placer mines, and most of the remainder from auriferous lodes, mainly from the Treadwell group of mines. The gold yield from the Pacific coast belt of Alaska increased, but declined from the Yukon Basin and from northwestern Alaska. There was a considerable falling off in the gold output of Fairbanks in spite of the fact that some lode mining has developed. The increased gold output in Alaska in 1912 was due mainly to the increase in the output of the lode mines of the Pacific coast belt.

Thirty-nine dredges were operated in Alaska in 1912, compared with 24 in 1911. Of these 3 are in the Fortymile district, 1 in each of the Fairbanks, the Birch Creek, the Iditarod, and the Kenai Peninsula districts, and the rest on Seward Peninsula.

ARIZONA.

The mines of Arizona in 1912 produced $331,707 more in gold and 213,816 more ounces of silver than in 1911. Of the total gold output nearly two-thirds was contained in the dry or siliceous ores and about one-third in the copper ores. Only 3½ per cent was from lead ores, nearly 2 per cent from zinc ore, and slightly over 1 per cent from placers. Exactly 56 per cent of the gold was recovered in bullion at gold and silver mills, while at the smelters 36.8 per cent was contained in crude ores smelted and 5.6 per cent in concentrates. Of the bullion yield at gold and silver mills about nine-tenths was recovered by the cyanide process and the remainder by amalgamation. The largest production of gold was made from the Tom Reed and Gold Road properties in Mohave County, and with other gold mines the county was recorded as producing half of the State total. Copper ores mined chiefly in the Warren district of Cochise County and siliceous ore from the San Francisco district in Mohave County were the chief sources of gold. The heaviest decrease of gold was in Yavapai County, due largely to the closing of the Congress mine, and in Yuma County the closing of the King of Arizona and Golden Star mines. Other decreases occurred in Gila and Pinal Counties. Placers in Maricopa, Mohave, Pima, Pinal, Yavapai, and Yuma Counties yielded $43,046 in gold as against $23,641 in 1911.

Of the total silver output 68.14 per cent was contained in copper ores, 10.69 per cent in siliceous ore, and 17.16 per cent in lead ore. Bullion produced at gold and silver mills yielded 1.3 per cent of the silver in 1912. At the smelters crude ore smelted yielded 85.4 per cent and concentrates 11 per cent of the silver total.

Arizona far surpassed itself in any of its former records as a copper producer and led all States in 1912 with a production of 365,038,649 pounds.

There were 10 smelting plants operating in Arizona in 1912, including the 2 new copper plants at Corwin, near Tucson, in Pima County, and Hayden in Gila County. There were 68 milling plants operating, some of the plants for only a short period, others the entire year. Twenty-eight plants used the amalgamation method, 11 amalgamation and concentration, and 1 amalgamation and cyanidation. Eight were straight cyanide mills and 16 were straight concentration mills. Arrastres were used on small quantities of ore by 4 operators.

CALIFORNIA.

The mine reports from the State of California show that there were 1,041 metal-mining properties productive in 1912, of which 532 were deep mines and 509 were placers of various kinds. This is 140 less producers than in 1911, but there were about 1,800 other mines on which development work was being done, but which had no output. Of the producing deep mines, 470 were gold, 24 copper, 12 silver, 25 silver-lead-zinc, and 1 zinc. The placers operated were 141 hydraulic mines, 65 dredges, 146 drift mines, and 157 surface mines. There were 31 counties of the State which produced gold in 1912. The most productive of these were Amador, with a gold output of $2,796,194; Yuba, $2,753,408; Butte, $2,346,229; Nevada, $2,081,958; Sacramento, $1,712,587; and Tuolumne, $1,113,291. Amador County leads in both yield from deep mines and also in total gold output for

the year. The largest yield from placers—$2,740,752—was in Yuba County, this coming mainly from dredging operations. The leading hydraulic mining county was Trinity, the greatest producer of gold from drift mines was Placer, and Yuba excelled in both dredge and surface placer output.

The deep mines of California produced $2,422,152 more gold than the combined placers in 1912, the proportion of gold to the total yield being 56.14 per cent from the deep mines and 43.86 per cent from the placers. Of the total placer gold, the dredges produced 85.93 per cent; the hydraulic mines, 7.98 per cent; the drift mines, 4.49 per cent; and the surface placers or sluicing mines, 1.60 per cent. It is to be noted that the dredges yielded 37.68 per cent of the total gold yield of the State in 1912. Since dredge operations on gravel beds began in California in 1899, these machines have dug out gold valued at $55,415,191, including $7,429,951 from this source in 1912.

The deep mines of the State produced a few hundred thousand dollars more in gold in 1912 than in 1911, but the placers, especially the dredges, produced somewhat less, so that there was little difference in the gold output of the two years. In general, the gold-mining industry remains in about the same condition it has for several years, the annual average yield being about $20,000,000. Some of the old lode mines which were given up as unprofitable 20 or 25 years ago are being unwatered and reopened under the present cheaper mining and milling conditions. No new large dredging fields have been found, and those in Yuba, Butte, and Sacramento Counties continue to be the most productive. In fact, the dredging industry shows some falling off in yield for the year.

The only matter of note in deep-mining operations is that litigation has caused several of the most important quartz mines to take steps to impound their tailings, as the hydraulic mines are required to do in certain counties. This action is taken to prevent pollution of streams into which these tailings have been allowed to escape. Another matter, also in the nature of a restriction connected with mining, and affecting the gold and silver output as well as the copper, is the continued agitation against the escape of deleterious smelter fumes which injure vegetation. All but one of the large smelters in Shasta County have been compelled to close down entirely, and the output of others in the State has been curtailed in the attempt to lessen the injury complained of.

The deep mines of the State made an output of 2,641,497 tons of ore in 1912, which is somewhat less than in 1911, mainly for the reason stated in connection with smelting operations. The 2,225,429 tons of siliceous ore yielded an average of $4.95 in gold and silver per ton. The average yield of gold and silver per ton from copper ores was $1.91, from lead ores $24.18, and from zinc ores $2.59. The average value in gold and silver per ton from all ores worked in the State in 1912 was $4.49, while the value of all the metals in ore sold or treated was $6.71 per ton. There is very little change in these average values per ton from year to year in California. The principal deep-mining region of the State is in the so-called Mother Lode counties, and the averages in that section are of interest. Amador County mines treated 673,498 tons of ore, which yielded an average of $4.11 per ton in gold and silver, mainly gold; Calaveras County, 371,568 tons, averaging $1.88 per ton; Eldorado County, 8,871 tons, averaging $4.90 per ton;

Mariposa County, 18,743 tons, averaging $8.36 per ton; and Tuolumne County, 227,308 tons, averaging $4.94 per ton. In Nevada County, which is not on the Mother Lode, but which is the only county aside from Amador which produced over $2,000,000 from deep mines in 1912, the 270,134 tons of ore milled yielded an average of $7.62 per ton in gold and silver. There are now in California 190 active reduction mills, with 145 crushers, 2,963 stamps, 21 roller mills, 3 tube mills, 752 concentrators, and 30 cyanide plants, having a combined capacity for treating 12,267 tons every 24 hours.

COLORADO.

The yield of the metal mines of Colorado for 1912, as compared with the output in 1911, showed a comparatively small decrease in the output of gold, an important increase in the yield of silver, an appreciable decrease in the yield of copper, an appreciable increase in the output of lead, and a heavy increase in the yield of zinc.

The smelting situation in 1912 in Colorado remained as it was at the close of 1911. The Globe, Leadville, and Pueblo plants were operated continuously, but, as has been the case for several years, not at full capacity. The Durango smelter, temporarily closed in November, 1911, was reopened in the spring of 1912. The Salida smelter was actively operated. An increased tonnage of complex zinc ores from Colorado and other Western States was treated at the United States Zinc Co.'s plant at Pueblo. The semipyritic plant at Golden, closed in November, 1911, was not reopened.

The output of Cripple Creek in 1912 showed an increase of $445,709 in gold. The drainage of the mines by the Roosevelt Drainage Tunnel permitted the sinking of shafts several hundred feet, with the exception of the Vindicator and Golden Cycle mines, where electric pumps were installed. A greatly increased tonnage of low-grade dump and mine ores were treated in the district, at the Stratton's Independence, Portland, and other cyanide mills. Shipments of the higher-grade ores to smelters showed a small increase in tonnage and also an increase in average content of gold, but the tonnage to the custom plants at Colorado Springs showed a small decrease. The chlorination plant of the Portland plant was gradually transformed to a cyanide plant in 1911, and with the closing of the United States Reduction & Refining Co.'s chlorination plant at the end of 1911, the use of chlorination in the mills of Colorado was supplanted by cyanidation.

Lake County (chiefly Leadville) produced an increased tonnage, with small decreases in the quantity of gold and silver, an appreciable decrease for copper, but an increase of 7,735,155 pounds of lead and 34,335,327 pounds of zinc, with a total increase in value for the county of $3,636,379, placing Lake County as first in rank in total value of output.

The San Juan Region—Dolores, La Plata, Ouray, San Juan, and San Miguel Counties combined—showed increased yields of all the metals, except gold, for which there was a decrease of $916,419, Ouray County alone showing a decrease of $903,368. There was also a decrease of $151,546 in gold from La Plata County, but an increase of $187,111 from San Juan County. A greatly reduced tonnage was mined and milled from the Camp Bird mine, in the Sneffels district, Ouray County.

Boulder County showed a heavy decrease of gold, but increases of silver and lead. Clear Creek County showed a decreased yield of gold, silver, and copper, but increases of lead and zinc. The Lower Clear Creek mines showed a small decrease for all the metals and Upper Clear Creek mines showed increases in quantity of gold, lead, and zinc, but decreases for silver and copper, with an increase in total value. Gilpin County showed an increase for all the metals, with an increase both in bullion and material smelted. The Pitkin County (Aspen) yield of lead decreased, but the output of silver increased, and a considerable yield of zinc was made. The Summit County gold output from dredge operations increased considerably, and the yield of zinc increased heavily. This county ranks second in zinc yield. In Eagle County there were material increases for all the metals, particularly for zinc.

CENTRAL STATES.

The production of silver in the Central States in 1912 was 568,000 ounces as compared with 550,000 ounces in 1911. No silver ores are mined and the silver is recovered incidentally to the production of copper and lead. Of the 1912 output 528,000 ounces came from the copper lodes of Michigan, 35,000 from the lead ores of southeast Missouri, and the remainder from the lead-fluorspar deposits of the Kentucky-Illinois region. The lead concentrates from southern Illinois in 1912 averaged 6.31 ounces of silver per ton.

IDAHO.

The output of gold, silver, copper, lead, and zinc in Idaho in 1912 was valued at over $21,000,000. The principal increases were in lead, zinc, and copper, but no great change was made in either gold or silver. Gold from lode mines is gradually decreasing in the State, while gold from placers operated by dredges is decidedly increasing. The ore mined increased to slightly over 2,000,000 tons. The largest part, or 70 per cent, was lead ore, 21 per cent was zinc ore and lead-zinc ore, nearly 4 per cent was siliceous ore, and 4.3 per cent was copper ore. There were good increases in copper ore and lead-zinc ore. Of the gold, 44.68 per cent came from siliceous ore, 3.05 per cent from copper ore, 5.76 per cent from lead ore, and 45.75 per cent from placers. Out of 59 milling plants in operation in Idaho, 10 used amalgamation, 8 cyanide, 21 concentration, and the remainder used a combination of several processes. Forty-eight per cent of the gold in bullion was won by amalgamation and 52 per cent by cyanide. There was not a great increase in silver output, as the ratio of silver to lead in lead ores is decreasing and lead ore is the main source of silver in Idaho. Siliceous ore contained 2.8 per cent of the silver; copper ore, 5.44 per cent; lead ore, 85.42 per cent; and zinc ore and lead-zinc ore, 6.18 per cent. There were 5 dredges in operation—2 in Boise County, 2 in Lemhi County, and 1 in Custer County. Those at Elk City were idle. The output from these active boats was much greater than that of 1911, and since another boat is to be built in Lemhi County there is promise of further increase. Only one smelting plant was operated in the State at Clayton in Custer County.

MONTANA.

Increases were made in silver, copper, and lead, but gold and zinc decreased in Montana in 1912. The gold yield was $85,336 less and silver 746,442 ounces greater than in 1911. Copper ores produced mainly in Silver Bow County contained 19.5 per cent of the gold and the dry or siliceous ores 56.3 per cent, largely from Fergus and Blaine Counties (the latter formerly Chouteau). Placers were credited with 22 per cent, the larger part of the yield being from Madison County, followed by Lewis and Clark County. At gold and silver mills bullion was recovered containing 28.66 per cent of the gold, 5.32 per cent was the result of amalgamation, and 23.34 per cent cyanidation. Amalgamation of the gold was the general method employed in nearly all of the counties, and the cyanidation process was chiefly made use of in Blaine and Fergus Counties. Crude ores shipped to the smelters contained 30.6 per cent of the gold and concentrates smelted 18.4 per cent. The total output of silver in Montana, which was second in production to Nevada in 1912, aggregated nearly 13,000,000 ounces, of which over 83 per cent was from copper ores, 10 per cent from dry or siliceous ores, 2 per cent from lead ores, and 3 per cent from zinc ore. The largest increase of silver was made in Silver Bow County, which is credited with a production of over 11,000,000 ounces, or 89.16 per cent of the total silver. Silver recovered in bullion at gold and silver mills represented a little over a half of 1 per cent of the total and was extracted in largest quantity from ores treated by the cyanidation process in Blaine and Lewis and Clark Counties and by amalgamation in Lewis and Clark County.

NEVADA.

There were increases in all metals excepting gold in Nevada in 1912. Again, as in 1911, there were record productions of silver, whose total surpasses the output of any other State for 1912. Of the total gold output slightly over 93 per cent was extracted from dry or siliceous ores, 3.6 per cent from copper ore, 1.2 per cent from lead ore, and 1.7 per cent from the placers. The largest decrease of gold was made by the mines in the Goldfield district of over $4,000,000 in 1912, to which should be added the decrease of Humboldt County, with nearly $300,000 less than in 1911, due largely to the diminished output of the National mines. Of the total gold production, amounting to over $13,000,000, three counties, Esmeralda, Nye, and Humboldt, yielded from the mines over $11,000,000. Bullion was recovered representing 81.98 per cent of the gold from ores treated at gold and silver mills, of which 13.66 per cent of the total gold was saved by amalgamation and 68.3 per cent by the cyanidation process, while at the smelters 5.68 per cent was contained in crude ores smelted and in concentrates 9.73 per cent. The largest production of gold was made from the Goldfield Consolidated mines and the mines situated at Tonopah.

Silver increased, making a record production for 1912 of over 14,000,000 ounces. Of this output 91 per cent was produced from siliceous ores, the largest part originating in Nye County from the Belmont Mine at Tonopah, with the Tonopah Mining Co. a close

second, followed by 13 other properties. About 70 per cent of the silver was recovered in bullion at gold and silver mills where nearly all of it, or 69 per cent, was saved by cyanidation and the remainder by amalgamation. The two counties having the largest yield by amalgamation were Humboldt and Nye Counties; by cyanidation, Nye County with over 8,000,000 ounces, followed by Churchill County with 1,250,799 ounces. Smelting plants recovered from Nevada crude ores 10.7 per cent of the silver and from concentrates 16.01 per cent of the total silver.

NEW MEXICO.

In 1912 the output of all the metals in New Mexico increased. Copper showed the greatest increase, from 4,057,040 pounds in 1911 to 34,030,964 pounds in 1912. The zinc output also increased 33 per cent, and the production of silver increased over 13 per cent in quantity. The yield of lead was almost twice that of the 1911 yield. Gold increased slightly.

The Mogollon district, Socorro County, 80 miles from the nearest railroad, at Silver City, is the most important district in New Mexico in the output of gold and silver. The production in 1912 of $524,858 for gold and 1,093,158 ounces of silver shows little change from the 1911 yield, which was 1¾ times that of 1910. The ore is siliceous, oxidized, and sulphide, with very little base metals, carrying (in 1912 in terms of recovered metal) 0.2505 ounce, or $5.178 in gold per ton, and 10.78 ounces, or $6.63 in silver. All the ore is milled in the district, by concentration, sliming, and agitation and percolation in cyanide solution, the bulk of the product being cyanide precipitates, with a few cars of high-grade concentrates. There are 5 mills in the district (3 operated almost continuously, 1 operated part of the year, and 1 idle in 1912), with a possible gross capacity of 500 to 600 wet tons per day, and an actual tonnage treated for 1912 of 290 wet tons per day. The auriferous pyritic quartz veins of White Oaks, Lincoln County, have yielded a large quantity of gold, but there was a small decrease in the yield for 1912. The ore is chiefly amalgamated, cyanidation being used occasionally. The Elizabethtown district, Colfax County, in point of total production one of the leading mining districts of New Mexico, both from placers and lode mines, continued to be the most important placer district in the State. After the Mogollon district, the second gold and silver producing district is the Lordsburg district, Grant County, fissure veins in that district yielding in 1912 increased shipments of siliceous gold and silver, bearing copper and dry ores. (The low-grade copper deposits of the Chino Copper Co., at Santa Rita, carry practically no precious metals.) Basic oxidized and sulphide ores of gold and copper of the Jarilla district, near Orogrande, Otero County, again yielded an increased gold output, and placer operations also yielded an appreciable quantity of gold. The reopening in July, 1912, of the mines and smelter of the Santa Fe Gold and Copper Mining Co., at San Pedro, Santa Fe County, resulted in a considerable yield of gold and silver in the matte yielded in the smelting of the copper ores of this property. The tonnage of the base ores of the Las Animas district, near Hillsboro, chiefly sulphides of copper carrying gold and silver, decreased heavily,

although the small output of gold from dry placers in this district was nearly twice that of 1911. Lead and iron concentrates from the lead-zinc ores of Magdalena furnished some silver.

OREGON.

The State of Oregon showed quite a material increase in the value of its metal output in 1912 as compared with 1911, that of gold alone being $136,634. This was the first time in several years that the State has showed an increase in the value of its mineral products. There were 34 more productive mines reporting than in 1911, but the tonnage of ore treated was less. Of the 210 producing mines 54 were deep and 156 were placers. Of the placers 102 were hydraulic mines, 8 drift mines, and 46 sluicing or surface mines, and of these the hydraulic mines alone show an increase of output in 1912. The hydraulic mines yielded $151,130 out of a total gold production from placers of $189,096 for 1912. Josephine and Jackson Counties are the source of most of the placer gold, Josephine being second in rank of gold-producing counties of the State and the leader in placer gold output. From the deep mines 90,945 tons of ore were mined and treated, and this ore was of a much higher average value per ton than the ore treated in 1911. There was an increase of $130,849 in gold occasioned by this increased average value per ton, which was the main reason that the gold yield shows so much of an increment for 1912. The largest producing county of the State in 1912 was, as usual, Baker County, which showed an increase in gold output of $94,255 over that of 1911. The gold yield of this county in 1912 was $484,041 from 49 producing mines. The average value of the siliceous ores milled in this county was $7.76 per ton in gold and silver, but the ores shipped to the smelters yielded $118.93 per ton. The production of the deep or more permanent mines of the State is each year exceeding that of the more easily exhausted placers, although at one period Oregon was best known for its placer yield. The northeastern counties of the State are much more important producers than the southwestern counties (although the latter are supposed to form a continuation of the very productive California gold belt), which for over 50 years, during the preponderance of the placer-gold mining, yielded a considerable proportion of the gold from Oregon. It is mainly the output of Baker County, in northeastern Oregon, which makes the production of the counties in that region the more prominent. In northeastern Oregon the producing counties are Baker, Crook, Malheur, and Wheeler, but Baker County contributed 91.2 per cent of the total yield of these counties in 1912. The silver production of Oregon was about 50,000 ounces, mainly from siliceous ores, with a small yield from the placers, copper ores, and lead ores. There were 29 active reduction mills in Oregon in 1912, with 27 crushers, 312 stamps, 11 roller mills, 80 concentrators, and 8 cyanide plants. The combined capacity of the active plants in 24 hours was 1,099 tons, while the capacity of the idle plants was 1,553 tons daily.

GOLD PRODUCTION OF PHILIPPINE ISLANDS.

[Daily Consular and Trade Reports, March 10, 1913, from Report of Division of Mines, Bureau of Mines Manila.]

The following table shows by Provinces the gold output for the three years 1909, 1910, and 1911:

Province.	1909	1910	1911
Ambos Camarines	$108,350	$72,450	$90,000
Mountain	128,200	47,980	33,203
Sorsogon (Masbate)	.....	.....	35,250
All other	11,047	34,000	22,500
Total	247,597	154,430	180,953

SOUTH DAKOTA.

The production of gold, silver, and lead in South Dakota in 1912 was the largest ever produced in any one year, the output being over $200,000 above the previous maximum mine yield in 1908 and over $450,000 larger than that of 1911.

The Homestake mine, which annually yields the bulk of the gold bullion from this State, was operated continuously throughout the year, with a small increase in tonnage, but an appreciable increase in average value per ton. The published report of this company shows a production of 1,528,923 tons, with an average value of $4.31+ per ton and a total value of $6,600,953. The company's hydroelectric plant, on Spearfish Creek, which has been under construction for several years, was completed early in the year and supplied power to the works.

The tonnage of milling ore from the Golden Reward group, on Bald Mountain, was equal to the 1911 yield, but an increased tonnage of crude ore was shipped to smelters. A 75-ton roaster was installed for the preliminary treatment of the sulphide ores before cyanidation. The Trojan mill was operated continuously in 1912, against five months in 1911, with a resultant increase in tonnage treated. The tonnage from the Wasp No. 2 mine, where steam shovels are used for extracting the ore, showed a small increase. Because of the burning of the Mogul mill in March the output of the property decreased. After the fire the Mogul ore was treated at the Lundberg, Dorr & Wilson custom plant, which was also operated on ore from the Buxton and Bonanza, Midget, and Dakota mines. The New Reliance, Victoria, and Black Hills-Standard mills were operated during a part of the year.

Placer mines in Custer, Lawrence, and Pennington Counties yielded a slightly increased output. The most important production of placer gold came from the dredge at Mystic, Pennington County, with a small increase over the 1911 output.

WYOMING.

[From Bulletin 499, "Coal near the Black Hills, Wyoming-South Dakota," issued by the United States Geological Survey, 1912.]

An interesting feature about the Cambria coal is that it is said to be gold bearing. According to a verbal statement by W. E. Mouck, superintendent of the Cambria mines, an assay made by the company's chemist of ashes from the boiler house showed $10 per ton and of the sandstone roof of the bed $2 per ton in gold. This unexpected result led to further investigation, and soot from the furnace stack was assayed, with the result that it was found to contain $4 per ton in gold. The coal itself has shown from nothing up to $2 per ton in gold when the coal was selling for $1.50. In 1896, when coke made at Cambria was selling for $3.50 per ton, samples were taken from 31 cars during a period of three weeks and were assayed by the company's chemist. The samples from 31 cars of coke showed an average of $2.46 per ton in gold and $0.28 in silver. The following results of these assays were kindly furnished by the Cambria Fuel Co.:

Gold and silver assays of coke made from Cambria coal.

[1] Valued at $20 per ounce.

[2] Valued at $0.65 per ounce.

Henry C. Beeler, chemist, Wyoming, Aug. 8, 1896.

Smelters at Deadwood, S. Dak., which used the Cambria coke, must have profited by it, for they recovered not only gold in their ores, but the gold from the coke also.

Gold was found in some of the coal from the Jumbo mine and the Antelope mines 1 and 2. The distribution of the gold in the mines was never determined. There is more gold in the splint and bony coal than in the best bituminous. It may be associated with pyrites, which occurs commonly in the splint and "pine needle" coal.

As there are no known dikes or veins within many miles of the coal mine at Cambria, the gold can not be explained as derived from such a source. That the gold was introduced in the quiet waters of the swamp, either in solution or as very fine particles in suspension, and deposited there by precipitation or by gravity is not impossible nor yet readily conceivable; first, because it is presumed that the water discharged into the swamp was comparatively fresh meteoric water and would not have dissolved gold; second, because drainage in and around a large swamp is very sluggish. Under such topographical conditions it is hardly probable that even fine gold would reach and be distributed in a large swamp. The most plausible explanation seems to be that the sands which submerged the swamp and now form the roof of the coal bed were derived in part from old gold-bearing alluvium. It was noted above that the sandstone roof carries some gold. Currents which transported the sand and the grit which occurs in some places a few feet above the coal certainly were strong enough to transport fine gold. While the sand was being deposited the gold may have worked down into the underlying bog and is now found in the coal.

SOUTHERN APPALACHIAN STATES.

The combined gold production of Alabama, Georgia, North Carolina, South Carolina, Tennessee, and Virginia in 1912 was about $222,000, an increase of $63,000, entirely due to the largely increased output from North Carolina, amounting to $166,000, or more than double the 1911 yield. The total output from other Appalachian States declined over 36 per cent. Eighty-six per cent of the gold output was derived from gold quartz ores, 7 per cent from placers mainly in Georgia and North Carolina, 4 per cent from copper ores of Tennessee and North Carolina, and the remainder from lead-zinc ore mined in North Carolina.

The silver output from the Southern Appalachain States in 1912 declined over 11,000 ounces. Ninety-three per cent of the silver was derived from the copper ores of the Ducktown district in Tennessee and 2 per cent from copper ores from Maryland, North Carolina, and Virginia. The remainder of the silver production was about equally divided between that derived from the lead-zinc ores of North Carolina and the silver recovered in the refining of gold bullion from gold quartz ores and placer mines.

TEXAS.

The yield of silver in Texas, which has always represented practically the total precious metal production, showed a decrease in quantity of over 18,000 ounces for 1912, but an increase in value of $24,000. The gold output was only nominal, the copper and lead production was small, while the zinc ore shipped materially increased. As usual the greater part of the State's silver production was from the Shafter district in Presidio County.

UTAH.

In 1912 there was a decrease in the production of gold, copper, and zinc, but silver and lead increased. Gold showed a decrease of over $400,000 and may be expected to be as much less in another year, due to the closing of one of the largest gold producers in Utah, the Mercur mine, which has been productive for over 23 years. Of the total gold output in 1912 over half was derived from copper ores, 34.5 per cent from dry or siliceous ores, nearly 12 per cent from lead ores, and over 2 per cent from lead-zinc ores. There was a very small placer output and no dredges were operated. In bullion from gold and silver mills 10.3 per cent of the gold was recovered from ores treated principally by cyanidation. At smelting plants the crude ores smelted yielded 67.3 per cent of the gold and concentrates 21.4 per cent. The Tintic district, which is partly in Juab County and partly in Utah County, produced 44 per cent of the gold, followed by the Bingham district in Salt Lake County with 42 per cent. Tooele County, in which the Mercur mine is situated, recovered 10.5 per cent.

An increase of 10 per cent in 1912 in the silver output placed Utah second to Nevada and ahead of Montana. The largest yield of silver was made in the Tintic district, credited with 7,073,104 ounces, followed by the Park City region with 3,642,749 ounces and the Bingham district with 2,218,822 ounces. Lead ores mined in Utah yielded 44.89 per cent of the total silver; siliceous ores, 25.18 per cent; copper ores, 18.37 per cent; lead-zinc ores, 10.3 per cent; and copper-lead ores, 1.11 per cent. Bullion recovered at gold and silver mills contained less than a half of 1 per cent of the silver which was nearly all recovered by the cyanide process. Some tests were made at Park City by an acid leaching process on Ontario low-grade silver ores that may prove a source of considerable silver in the future. Smelting plants treated various kinds of crude ores which yielded 78 per cent of the silver and the concentrates smelted yielded 20.13 per cent.

WASHINGTON.

The total value of the gold, silver, copper, and lead from ore produced in Washington in 1912 was over $1,000,000, a slight increase. Of this total, 60.75 per cent represented the value of the gold; 22.75 per cent silver; 15.99 per cent copper; and 0.51 per cent lead. The output of silver and copper increased and that of other metals decreased. In recent years most of the State output was derived from ore shipped to various smelting plants, but during 1912, 22.43 per cent of the ore was treated in gold and silver mills, principally by

those using cyanidation, and 69.47 per cent was shipped directly without treatment. Most of the ore milled, with the exception of copper ore concentrated, was that mined at Republic and treated in the San Poil and North Washington cyanide mills. Nearly 24 per cent of the gold and 7.69 per cent of the silver came from ores treated in gold and silver mills, and 75.68 per cent of the gold and 86.65 per cent of the silver came from ores shipped to smelters. There were 9 mills operating in the State, of which 4 used amalgamation, 3 cyanidation, 1 amalgamation and cyanidation, and 1 concentration. Aside from the output from Republic, the most noteworthy production was a sulphide copper ore and concentrate shipped from Chewelah district of Stevens County, where considerable development work is in progress.

APPROXIMATE GOLD PRODUCT.

Approximate gold product of the United States during the calendar year 1912.

Items.	Weight.
	Fine ounces.
Domestic product of fine bars reported by private refineries	2,681,108
Unrefined gold of domestic production deposited at the mints and assay offices	1,816,859
Domestic gold contained in ores, copper matte, etc., exported for reduction	22,752
Total domestic product for 1912	4,520,719

Approximate disposition of the gold product of the United States during the calendar year 1912.

Items.		Weight.

[1] Includes small quantity of silver from placer.
[2] Includes silver in lead-zinc, copper-lead, and copper-lead-zinc ores.

DREDGE PRODUCTION.

The possible production of gold by dredges has been the subject of much discussion during the past 10 years, and some very sensational predictions have been made of the probable yield from this source. The production by dredges in the United States has been mainly in California and Alaska. The total yield during the last 7 years has been as follows:

Dredge output of gold.

MINE PRODUCTION.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Product of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792–1873 is by R. W. Raymond, commissioner, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1912.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States Mint at Philadelphia and the United States assay office at New York hold the foremost place; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1912, with the class of material from which they were made:

Gold and silver bars issued by the Government institutions and manufactured by private refineries for use in the industrial arts during the calendar year 1912.

Material used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	Dollars.	*Dollars.*	*Dollars.*	*Fine ozs.*	*Fine ozs.*	*Fine ozs.*
Bullion, old plate, etc	38,011,583	2,465,674	40,477,257	2,049,676	27,809,500	29,859,176
United States coin		899,259	899,259	139	7,500	7,639
Total	38,011,583	3,364,933	41,376,516	2,049,815	27,817,000	29,866,815

Estimating that the total amount of gold coin used in the arts during the calendar year 1912 has been $3,500,000, and silver coin $100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was $43,977,257 and of silver 29,936,520 fine ounces.

In order to arrive at the net consumption in the industrial arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to coinage use. In the year 1912 these amounts aggregated $8,106,705 in gold and 7,291,699 fine ounces in silver, which leaves $35,870,552 of gold and 22,644,821 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The table following gives the amounts and classification of the gold and silver used in the industrial arts in the United States since 1880.

Gold and silver bars furnished for use in manufactures and the arts and classification of the material used, by calendar years, since 1880.

THE WORLD'S INDUSTRIAL CONSUMPTION.

Since 1893 this bureau has endeavored to obtain, through the United States representatives abroad, official estimates from the various countries of the world of the consumption of precious metals in the arts and industries. From only a few countries are official figures obtainable, and even these are not free from obscurity, as uncertainty exists about how much old jewelry and melted plate is included. Where figures are based upon the sales made by refiners to manufacturers an allowance must be made for the scraps and sweeps that the manufacturers sell back to the refiners. An official reply from France, written in 1912, offers the following explanation:

If one wishes to know exactly how much new metal and how much melted-down metal enter the composition of the consumption of precious metal in France, it is impossible to answer this question. The statistics published by the ministry of finance give only the valuation of the total consumption, and the difference between the new metal and that melted down and refined is practically impossible to determine on exact and scientific bases.

The quasi impossibility of giving this information results from the fact that the French jewelers as well as the goldsmiths make use not only of new metal, but also make use of metal coming from the melting of their wastes and leavings. This metal melted down is rarely enough employed by them; it is more often sold by them to smelters of gold and silver, who mix it and make of it ingots that they resell to commerce.

It is almost impossible to arrive at a precise result; however, a very serious inquiry made of the principal firms occupying themselves with the melting, sale, and purchase of leavings, fallings, and filings in France, has permitted us to reach an evaluation of one-third of old metal for two-thirds of new metals.

Thus, if one turns back to these statistics of 1911, there has been sold as silver the following total:

Silver:	Kilograms.
First title	78,600
Second title	34,800
Virgin	66,000
Compound	34,700
Total	214,100

The old silver can be estimated at one-third of this weight, or old silver melted down, 71,366 kilograms.

	Kilograms.
Fine gold	22,700
Gold at 1,000	700
Alloyed gold	24
Prepared gold	3,700
Total	27,124

The old gold melted down can be estimated at one-third, or 9,041 kilograms.

An allowance of one-third would seem to be reasonable, if based upon the sales of gold bars by refiners, as scrap would be re-treated and used over and over; but it would appear to be very large, if based upon the net consumption by manufacturers.

Obviously, the chief interest from a monetary standpoint in the consumption of the precious metals is in the amount withdrawn or diverted from monetary use. In some countries it is the common practice among manufacturers to melt down the current gold coins, while in other countries, owing to laws forbidding this practice, or other reasons, coins are seldom melted. The amount of old material entering again into the manufacture of jewelry does not concern the student of monetary conditions, but if old material is sold to the mints and there converted into money the consumption of new gold is to that extent contraband. The interrogatories sent out by this bureau therefore include a particular inquiry upon this point. In its calculations the bureau includes coins melted for use in the arts with new material. It has been suggested that the amount of gold used for industrial purposes may be arrived at by deducting the new coinage by all countries from the total production, but this calculation would be clearly defective for two reasons, to wit: (1) It would take no account of coins melted, and (2) it would take no account of bullion in the banks of issue.

It has also been suggested that the industrial consumption may be easily arrived at by taking the net importations of gold bullion and deducting therefrom the coinage and any increase of bullion in the bank stocks. This method has the merit of simplicity, but unfortunately the statistics for imports and exports are notoriously defective, the customhouse figures of two countries seldom being in agreement upon the movement between those two countries.

From many countries no estimate of consumption can be obtained. The information available for a world estimate is fragmentary and very unsatisfactory, but the subject is one in which much interest is continually manifested, and this is the excuse for dealing with it at all.

Reports from several countries indicate that platinum is to some extent taking the place of gold in the composition of fine jewelry.

The information which this bureau has been able to obtain concerning industrial consumption in 1912, as the result of its interrogatories is given below:

Africa (*Boma, Kongo*).—"The quantity of gold, mostly British gold coin, used in the arts during 1912 was 500 ounces, fine."

South Africa (*Transvaal*).—"Gold bullion to the value of £873 ($4,248) and silver bullion to the value of £3,433 ($16,707) were imported during 1912," which amount is considered to have been used in the arts.

Arabia.—An official communication from Maskat states that "there were used in the arts during 1912, $6 000 worth of gold and $10,000 worth of silver."

Argentina.—The report is as follows:

It is not known what amount of gold and silver was used in the industrial arts during 1912, but at the Argentina mint there was melted, to be used for medal purposes, £225 (equivalent to $10,950).

It is believed that, although the people of Argentina buy important amounts of gold and silver jewelry and tablewares, the most of these are imported.

Australia.—The Commonwealth statistician, Mr. G. H. Knibbs, submits the following estimate of the industrial consumption of gold and silver in Australia in 1912:

Items.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
Used by jewelers, electroplaters, etc	66,782	58,620
Used by dentists	25,000	.....
Total quantity	91,782	58,620
Value	£392,577 ($1,910,476)	£6,839 ($33,282)

Austria-Hungary.—No information is available for Austria-Hungary, excepting the figures for the weight of articles presented at the official stamping bureaus.

These were reported as follows:

	Kilograms.
Austria:	
Gold	4,885
Silver	55,867
Hungary:	
Domestic goods—	
Gold ware	2,796
Silverware	17,172
Gold-plated wire	204
Silver wire	581
Foreign goods—	
Various gold ware	373
Diversified silverware	3,277
Gold watches	167
Silver watches	745
Gold-plated wire	48
Silver wire	21

For the striking of medals and proof coins, 0.86125 kilograms of gold and 12 kilograms of silver were employed.

The total kilograms of gold and silver ware for Hungary were as follows: Gold, 3,500, and silver, 21,810; and the grand total for both countries is, gold, 8,474, equivalent to $5,631,820, and silver, 77,665 kilograms, or 2,496,930 fine ounces.

These figures are understood to be for the gross weight of the wares. As the stamping of wares is no longer obligatory the foregoing is only a part of the consumption. The report to this bureau makes this statement without indicating the proportions of stamped and unstamped goods.

If the gold used in unstamped manufactures equals the weight of the alloy and old gold used in the stamped goods, the consumption of gold in the dual kingdom is approximately $5,000,000, and this estimate is adopted. Owing to the tendency to increase the percentage of alloy the estimate is more likely to be over than under the fact. The new silver consumption is estimated at 2,000,000 ounces.

Belgium.—The American minister at Brussels, the Hon. Theodore Marburg, has taken an exceptional interest in the bureau's inquiries

into the use of gold in the arts, and submits the following figures and also the attached copies of correspondence between himself and Dr. A. E. Janssen, professor of monetary legislation and politics, University of Louvain, and secretary general of the Belgian Government commission for the study of monetary reforms:

The law of June 5, 1868, made the working of gold and silver free.

The Belgian Government declines to give an estimate of the gold and silver used in the arts, but from various sources we arrive at the following:

GOLD.

Classification.	Weight.	Value.
	Kilograms.	*Francs.*
Gold bullion (bars) imported into Belgium	2,423.66	8,348,162.00
Gold produced by Belgian smelters from imported lead and silver ores	1,268.00	4,367,549.92
Total	3,691.66	12,715,711.92
	Francs.	
Gold bullion (bars) exported (188.29 kilograms)	648,576	
Increase in gold reserve of Bank of Belgium in form of bullion (bars)	350,000	998,576.00
Balance presumably used in the arts in 1912	.....	11,717,135.92

NOTE.—The Government did not strike any gold coins during the year and only a negligible quantity (2 to 5 per cent) of the gold which is used in the arts is derived from melting down coin.

SILVER.

Classification.	Value.	
	Francs.	*Francs.*
Silver bullion imported into Belgium	4,729,614	
Silver produced by Belgian smelters from imported lead and silver ores (261,632 kilograms) at 90 francs per kilogram	23,546,880	28,276,494
Silver bullion exported	3,148,332	
Value of silver bullion used in coining 5,000,000 lei (francs) for Roumanian Government, at 0.60 franc worth of silver to the 1 lei (franc) piece	3,000,000	6,148,332
Balance presumably used in the arts	.....	22,128,162

Accepting these figures the consumption of new gold in the arts would be 109,395 fine ounces, of the value of $2,261,400, and of new silver 6,947,674 fine ounces. The former is not improbable, but the figures for silver seem high as compared with France and other countries.

BRUSSELS, *October 17, 1913.*

DEAR MR. JANSSEN: Last spring you were so good as to communicate to me your views on certain monetary questions put to me by my Government. The information transmitted proves of great interest to the Treasury Department at Washington and they now ask further questions along the same line. I quote from the Director of the Mint as follows:

"According to our returns, the holdings of gold by the National Bank of Belgium show an increase during the year of approximately $5,000,000. As there was no coinage of gold during the year at the Belgian mint it would appear that this accession must have been in bullion or foreign coin. If so, this would more than account for the excess of imports over exports, without leaving anything for the amount consumed in the arts.

"This entire subject of the amount of gold and silver consumed in the arts is a very perplexing one. I have been tempted frequently to abandon all effort to make any estimate, but the subject is one of great interest and I have continued in the hopes that gradually sufficient interest would be aroused among statisticians and economists in all countries to secure active and effective assistance."

As you will notice the subject interests my Government, and I should be most grateful for any further light you can throw on it.

I had a talk with the leading jewelers in Brussels last evening, Wolfers Freres, which brought out certain facts, namely:

(*a*) The diminishing proportion of gold used in the manufacture of the best jewelry as against a great increase in platinum. Wolfers use about one-fifth only as much gold as platinum. Manufacturers of cheaper jewelry, like those in Antwerp, of course continue to use gold to a greater extent than this.

(*b*) Only the small jewelers melt down coin for use in their trade, there being a statute in Belgium against it. Wolfers estimates that of the gold used in manufactured jewelry not more than 2 to 5 per cent is derived from melting coins.

A good deal of old jewelry comes in from time to time for the purpose of having the stones reset. Such jewelry is melted down and refined and loses its identity, the jeweler simply selling this for the gold that is in it and buying bars when he needs gold. As the main object of the statistician is to determine what proportion of the annual output of gold is consumed in the arts and so withdrawn from monetary use, the remelting of old jewelry, I take it, need not be taken into consideration.

I take the liberty of inclosing a sheet from the report which I made to my Government June 4. You will notice that I estimated the gold used in the arts in Belgium in 1912 at 3,503.37 kilograms, valued at 12,067,135.92 francs. The inclosure referred to will show how I arrived at this. In countries where the use of gold and silver is free, i. e., not supervised and recorded by the Government, it seemed to me that the safest way to arrive at the estimate of the amount of gold used in the arts was simply to find out how much bullion entered the country and deduct from this the amount coined each year in the country and the amount exported. This method of course neglects the quantity of bullion on hand and carried over from the previous year, but the quantity of such bullion so carried over can not be ascertained, and to offset it there will be a quantity carried over from the present year to next year. Taking an average of, say, 10 years, I should think that this would even itself up, and that therefore the method pursued is the only practical one under the circumstances and is a comparatively just one. If gold coin were melted down to any extent such a method would be quite unsafe; but the percentage that is said to be used—from 2 to 5 per cent—is really a negligible quantity.

Won't you be so good as to give me, at your leisure, the benefit of your criticism on this plan, and let me have any other observations that you may be inclined to make on the subject.

Sincerely,

(Signed) THEODORE MARBURG,
American Minister.

Prof. A. E. JANSSEN,
Prof. de Legislation et Politique Monetaires,
University de Louvain, 51 rue d'Arlon, Brussels.

BRUSSELS, *November 20, 1913.*

MR. MINISTER: I have the honor to answer your esteemed letter of October 17 last relative to statistics of the movements of money and of the precious metals in Belgium. * * *

The United States Director of the Mint writes you on the subject of the increase of the gold reserve in the National Bank of Belgium during the year 1912. That increase has been constant for several years, as appears from the following figures:

To December 31—	Francs.
1908, the reserve was	112,436,850.00
1909, the reserve was	115,301,230.00
1910, the reserve was	125,694,390.00
1911, the reserve was	189,114,130.00
1912, the reserve was	214,428,652.69
1913, the reserve was	248,048,537.67

As the United States Director of the Mint has very justly observed in his letter to you, there has been no gold minted at the Brussels mint during the years above named; in fact, has been none since 1882.

This condition is explained by the fact that inasmuch as Belgium forms part of the Latin Monetary Union, it is only necessary to import gold coin bearing the French, Swiss, or Italian device in order to increase the reserve which has legal circulation in Belgium. It is in this way that the increase of the gold reserve, amounting to 146,000,000 francs during the last five years, has been realized in great part by the importation of the gold coin of the Latin Union, in lesser part by means of other foreign money (English sovereigns and German marks), and in very small part by means of ingots.

The importations of gold by the national bank are entirely independent of transactions in the yellow metal among gold workers and jewelers.

The bank imports gold directly from abroad and only rarely puts it in circulation when certain Belgians demand it for use in foreign voyages. The bank is enabled to do this by reason of the unlimited legal tender quality enjoyed by the 5-franc silver pieces among the states of the Latin Union.

As to the quantity of gold employed in industry in Belgium, the lack of data does not permit me to give an estimate of it. In your letter you refer to the information given to you by Messrs. Wolfers; this information is interesting and as that house is one of the most important and the most reliable of Brussels I am of the opinion that you may accept the information as correct.

In regard to the 2 to 5 per cent of gold used by jewelers and derived from melting down coin, in my opinion, this gold comes neither from the National Bank of Belgium, which does not give out any of it, nor is it derived from gold in circulation because, as you yourself must have observed, there is almost none such. The 2 to 5 per cent gold derived by melting coin must therefore be of foreign origin.

You ask my opinion of the method which you have employed in attempting to estimate approximately the amount of gold employed in Belgium in art and industry. After ripe reflection I have the pleasure of writing you that I approve of your method, which, moreover, appears to me to be the only one capable of giving any results in a country like Belgium where the use of gold and silver is free.

Accept, Mr. Minister, the assurance of my high esteem.

(Signed) A. E. JANSSEN.

Hon. THEODORE MARBURG,
American Minister at Brussels, Belgium.

Canada.—"The quantity of gold and silver used in the arts during 1912, was 119,930 fine ounces of gold (value $2,479,173), and 875,000 fine ounces of silver bullion."

China.—The Province of Mukden reports that "there were used in industrial consumption, 6,200 fine ounces of gold and 123,919 fine ounces of silver." The Province of Shanghai consumed "40,500 ounces of gold and 193,500 ounces of silver." The Province of Swatow used in the arts 850 ounces of gold and 10,500 ounces of silver with the following explanation:

These amounts consist almost altogether of old jewelry—a small quantity of gold leaf is used, and a few silver coins—generally those refused by bankers, are melted down. Figures are for Swatow only—not consular district.

There is considerable gold and silver working carried on in Chaochowfu, the principal city of the district, but as in Swatow the material used is almost exclusively old jewelry, the quantity of gold leaf and gold and silver bullion or coin used being negligible. Hence, this industry has little or no effect on stocks of bullion or coinage in circulation.

France.—The exact figures showing the quantity of gold and silver bullion used in the industrial arts in France during 1912 are not obtainable, but the estimate of the French mint is 40,100 kilograms of fine gold (value $26,650,460), and 364,000 kilograms of fine silver (equivalent to 11,702,600 ounces). If this is reduced by one-third for old material the net consumption would be, gold $17,766,974 and silver 7,801,734 fine ounces.

Germany.—No official information has been received from Germany relating to the uses of the precious metals in the industries since 1907, when an investigation was made and the following summary of results published:

Material used.	1907
	Marks.
German gold coin	49,371,000
Foreign gold coin	2,026,000
Fine gold	40,219,000
Total	91,616,000

Nothing was said about the composition of the fine gold bars named in this report and in its first comments upon the report this bureau treated the entire consumption as of new material. Later information forced us to revise this conclusion and then falling back upon the more detailed report of the German Government of the investigation for the years 1896 and 1897, when it explicitly said that a deduction of one-third of the total was necessary, we applied this method, not without misgivings, to the returns for 1907. We are now satisfied that this was too great a deduction. One-third, or possibly two-fifths of the bars sold to manufacturers should probably be deducted on account of old material and scrap returned from the factories. Upon this basis the consumption of coin and new gold in Germany in 1907 would be 78,209,000 marks, or approximately $19,000,000.

An article in the Frankfurter Handelsblatt, reviewing the subject, says:

The American Director of the Mint says that for the year 1910 his investigation of German industries shows 98.20 million marks gold, a round third, also 32.70 million of old material. He does not tell how he reached this conclusion. The Reichsbank, to whom the problem really belongs, has given great labor to bring light on the question, and after painstaking effort, says that the industries use somewhere near 40,000,000 to 50,000,000 in gold coins besides 20,000,000 gold (plates?) which are thrown off by the the mint for the foreign trade and 50,000,000 of old material; there was also in gross 110,000,000 to 120,000,000 marks of which not less than 42 to 45 per cent was old material. But this assumption does not in any way claim to be absolutely accurate. Manifold difficulties are encountered, as is shown by the following extract from the German gold and silver statement of Frankfort. The extract has relation to our recent article and runs thus:

"The basic figures given out by the Reichsbank calculate the amount used in the German industries at about 50,000,000 marks new gold, 40,000,000 to 50,000,000 old material, showing that the demand for gold for industrial purposes and the proportion in gold work can be calculated. When therefore the statement is made that 40,000,000 to 50,000,000 old gold was used in industry, with a consumption of new gold to the amount of 50,000,000 marks, then it is easily seen that the proportion of consumption of old gold to the consumption of new gold does not correspond.

"It is difficult, if not impossible, to obtain through statistics a perfectly reliable estimate of the gold necessary for industrial purposes. It is difficult for a practical man to understand how the industries use as much old gold as new gold. If, as the report says, 40,000,000 to 50,000,000 marks of old gold were used industrially, the amount of new gold should be double that amount—that is to say, about 100,000,000 marks—for Pforzeim stands among the foremost cities in gold-working industries. Valuation of the proportion of the amount of old gold to the amount of new gold says that a year's consumption of 20,000,000 marks in old gold is balanced by a consumption of at least 50,000,000 marks new gold; that is, an amount of 70,000,000 marks gold is consumed per year, 20,000,000 marks gold moving forth in industry returns through parting-work (a mint term) to the sphere of industry. A proportion of 2 to 5 is indicated, and it is implied that the proportion for Pforzeim holds for other establishments (industrial towns) of the country. If for the whole country the consumption is reckoned at from 40,000,000 to 50,000,000 marks, this sum must stand over against a consumption of new gold of at least 100,000,000 to 125,000,000 marks.

"These figures are given in the hope that perhaps they may help to a better understanding as to the valuation of the gold industries by bringing to notice the fact that on clear businesslike (mercantile) grounds the proportion of the old gold used industrially to the whole amount can not rise above a certain height. Old gold here includes smelted old rings and other objects and factory waste, which will be used again in manufacture."

It seems quite certain that this bureau erred in its deduction of one-third from the total consumption of Germany in 1907. This proportion of old material probably applies only to the fine gold bars sold by the refineries. On this basis the present consumption of gold in Germany must be reckoned at about $20,000,000.

The "Metalbank und Metallurgische Gesellschaft" of Frankfort-on-Main reports the industrial consumption of silver in Germany in 1912 at approximately 11,000,000 fine ounces.

Great Britain.—It is impossible to give any authoritative figures for the consumption of the precious metals in Great Britain, as no data exists from which a close computation can be made. Great Britain is unquestionably among the most important countries in this line of manufactures. As long ago as 1885 Sir Hector Hay, after extensive inquiry, estimated its industrial consumption of gold at $10,000,000 per annum. It should have nearly or quite doubled since, if the industry has kept pace with the development in Germany and France, but such evidence as is available does not point to so great an increase.

The returns under the British census of production act of 1907 give the aggregate gross value of the output of firms manufacturing jewelry, and plated goods as $43,044,192. The value of materials used is given at $25,529,659 and value added by manufacture at $17,529,659. This includes the value of gold, silver, platinum, and all materials, and if it is correct the consumption of gold can scarcely amount to the sum estimated by this bureau for the several years last past, i. e., $18,000,000.

It seems quite probable the manufactures are of lighter style and of lower grades of fineness than formerly.

The city of Birmingham is the most important manufacturing center in the jewelry business and has been for more than 100 years. The United States consul at Birmingham, commenting in a recent report upon the British census of manufactures, says:

> Birmingham jewelry, considered in the narrow sense of the term as articles made of gold, is not as a rule of the highest quality and price, as is shown by the fact that of the something under 341,000 troy ounces of gold assayed and marked at the Birmingham assay office in 1912, 211,000 troy ounces were of 9-carat gold, which is an alloy consisting of two-fifths gold and three-fifths base metal. However, the jewelry made in Birmingham is becoming more and more artistic and attractive, and though the higher-grade jewelry is not the chief product of the Birmingham factories many manufacturers produce rings and jeweled ornaments that would sell at wholesale as high as $1,000 each. The higher grades of jewelry are mostly manufactured in London.
>
> Most of the foreign shipments of jewelry and silverware consist of goods that do not have to be hall marked. A considerable quantity is shipped to London, to be marked there so as to be sold as if it were of London make, the impression prevailing that an article which has the London hall mark is of London make and therefore better. Londoners simply will not buy silver or gold articles of British make without the London hall mark, thinking the product is provincial and not so pleasing. Some is also sent to Chester and to Sheffield, Glasgow, and Edinburgh for the purpose of marking in order to meet the demands of customers, various markets having become accustomed to the hall marks of these various places and regarding articles without the same as being imitations. For that reason the figures of the assay office do not offer a basis for estimating the value of the output.
>
> In the line of gold articles almost 341,000 ounces troy were assayed and marked at the Birmingham assay office for the year ended June 30, 1912, which consisted, in round numbers, of 52,000 ounces troy of 22-carat gold, 69,000 ounces of 18-carat gold, 9,000 ounces of 15-carat gold, and 211,000 ounces of 9-carat gold. Many small articles of gold do not have to be assayed and marked, these consisting chiefly of articles that would be injured in the process of marking. But, in general, all gold and silver wares must be assayed and marked.

The total of gold consumption at Birmingham here reported is $3,806,956. Mr. Halstead goes on to report:

> In 1912, 4,200.186 ounces of silver wares were assayed and marked at the Birmingham assay office, of which 3,139 ounces were broken up because they did not meet the

requirements; 13,328,541 pieces of gold and silver ware were entered for assay. These figures afford an excellent idea of the output and extent of the Birmingham jewelry trades. They do not include the very large quantity of gilt jewelry, which is the name applied to imitation jewelry, nor do they include the medals and metal buttons and the electroplated ware. The manufacture of electroplate is an industry connected with the jewelry trades which, though long established in Birmingham, has recently been developing rapidly and for the products of which there happens at present to be a not inconsiderable demand from the United States. Sheffield was the home of the plated wares that were made by rolling silver on copper, and still is an important factor in the manufacture of electroplated or silver-plated wares.

The amount of fine gold contained in wares officially assayed at the assay offices at Birmingham, Chester, and Sheffield, and the gross weight of silver wares assayed in the five years 1908–1912 are given below:

Fiscal years.	Gold.	Silver (gross weight).
	Fine oz.	*Ounces.*
1907–8	268,273	5,802,855
1908–9	245,158	5,996,657
1909–10	247,591	6,563,649
1910–11	262,489	6,812,196
1911–12	269,871	6,930,972

A large share of the manufactures are not assayed, but although these figures show little change in the amount submitted for assay in five years they show approximately double the amount submitted in 1885.

Although these census figures do not apparently warrant so high an estimate, the known consumption in other countries makes us unwilling to reduce our estimate for Great Britain below $18,000,000 gold and 10,000,000 fine ounces of silver.

Guiana (British).—The gold and silver used in the arts during the fiscal year 1911–12 was as follows: Gold, 2,000 ounces, fine, valued at $41,344, and silver, 16,167 ounces, fine.

Honduras.—The consumption of new bullion in Honduras during 1912 was 2,000 fine ounces of gold and 5,000 ounces of silver.

India (British).—It is understood that the uncoined gold imported into India is all used in the industrial arts. The amount so imported in 1912 was:

Items.	Rupees.	Fine ounces.
Gold	142,000,672=$46,069,751	2,228,624
Silver:		
Imported	166,741,827= 54,096,606	94,613,000
Exported	164,942= 53,513	87,000
Silver, net imports	166,576,885= 54,043,093	94,526,000

There are no available figures showing the amount of silver used in the industrial arts in India. Usually the imports of silver bullion minus the amount used in coinage is taken as the amount consumed in the arts, but while this is approximately true over several years, it may not be true of a single year.

The new coinage was 104,207,983 rupees, or $33,805,070. Deducting this amount from the net imports gives $20,238,023, representing 32,923,414 ounces, fine. The net imports of silver bullion by private parties in the fiscal year ended March 31, 1913, were 26,915,625 ounces. Importations for rupee coinage are made by the Government. The figures for 1912–13 exceed those for 1911–12 by 4,607,250 ounces, but the latter were unusually low.

Italy.—No figures of any kind have been received for Italy. With its large population, artistic manufactures, and many tourists the consumption of the precious metals must be important. In the absence of information, the consumption of new gold is estimated at $3,500,000 and of new silver at 1,500,000 ounces.

Madagascar.—The quantity of gold used in the industrial arts during 1912 is reported to have been 2,572 fine ounces, of the value of $53,168. The report states that there was no silver used.

Netherlands.—"There were 38,302 fine ounces (value $791,773) of gold used in the arts during 1912 and 400,997 fine ounces of silver."

Panama.—"According to expert opinion, a merely nominal amount—not exceeding $500 in gold and 325 fine ounces of silver—were used in the industrial arts during 1912."

Portugal.—It is reported that 159,373 fine ounces of gold, of the value of $3,294,532, and 526,407 fine ounces of silver were consumed in the arts during the year 1912. It is understood that most of this was from old material.

Russia.—No figures were received from Russia for 1912. For 1911 the stamping office reported 364,122 ounces of gold wares and 5,762,182 ounces of silver wares. Making allowance for alloys, plated goods, and old material, and assuming an important production of unstamped wares, the consumption of gold is placed at $5,000,000 and of silver at 4,000,000 fine ounces.

Finland.—The estimate for Finland is included with that for Russia. At the Helsingfors stamping bureau, in the year 1911, there were assayed 75,011 grams of wrought gold and 81,506 lod[1] (34,852.64 Troy ounces) of wrought silver.

According to the mint assay accounts here, the portion of Government work assayed by the stamping bureau in 1911 was valued at 25,524.33 Finnish marks, being an increase over the year 1909 of 1,075.89 Finnish marks, and an average increase under the years 1902–1911 of 4,758.41 Finnish marks.

The output from the stamping bureau in the years 1902–1911 was valued as follows:

	Finnish marks.		Finnish marks.
1902	15,469.19	1908	23,956.97
1903	16,496.60	1909	24,448.44
1904	16,898.77	1910	24,190.25
1905	17,205.79	1911	25,524.33
1906	20,710.51		
1907	22,758.34	Total	207,659.19

[From the French mint report for 1912.]

The weight of fine gold used in Swiss industries in 1911 is estimated at about 13,700 kilograms. This estimate was made by the federal bureau from the gold and silver material in articles stamped and

[1] 1 lod is 0.4276083 of a Troy ounce.

verified by the different bureaus of verification, and upon the basis of observations made in the manufacture and commerce of watches and jewelry. It is not possible to know how much of this amount resulted from the remelting of coins and other manufactures, but it is probable, however, that new gold coins are used in preference for the melted gold. According to an estimate furnished by the federal bureau, the gold coins melted for industrial purposes amounted to about 5,000 kilograms.

The quantity of silver used in Swiss industry amounted to about 89,000 kilograms.

Servia.—"The gold and silver used in the first six months of 1912 was as follows: Gold, 210 fine ounces; silver, 12 fine ounces.

Sweden.—"The estimated quantity of gold used in the arts in 1912 was 25,600 fine ounces (value $529,200), and of silver 272,000 fine ounces."

Switzerland.—An official communication from Switzerland states that "the estimated amount of gold used in the industrial arts during the year 1912 was 14,500 kilograms, equivalent to 466,175 fine ounces, representing a value of $9,636,692. The silver so used is estimated to have been 90,000 kilograms, equivalent to 2,893,500 fine ounces.

About one-half of the consumption of gold is said to be of new gold coins, which is a net figure. If from the other one-half, one-third is deducted as old material the net consumption of Switzerland is approximately $8,000,000.

Egypt and Asia.—The industrial consumption of Egypt is unknown. The absorption of foreign gold coin, if we may judge by the customs records, is continuous, and as the imports and exports are by sea the records are likely to be more accurate than those for land movements. The net imports of gold into Egypt for the last five years have averaged about five million dollars per year, most of which is presumed to be hoarded. The excess of silver imports over exports during the last six years has averaged about three million ounces, but in 1912 was very small.

The gold bullion imports of India are all assumed to be for consumption, inasmuch as there is no coinage, and some of the sovereigns are also so used. The industrial consumption of Japan and China are known to be considerable, but no figures can be made for them. Altogether an estimate of $50,000,000 for the new gold consumption of Egypt and Asia seems to be well within the probabilities. In this connection it should be understood that the movement of gold to and from China is small, so that the consumption of China, whatever it may be, is probably for the most part of native gold which has not entered into the world's figures for production.

The exports of silver from London to India, Hongkong, and China were 108,792,000 ounces and from the United States to the same destinations, 19,099,032 ounces, a total of 127,891,032 ounces. The silver coinage of the India mints, which included British dollars for Hongkong banks, required 46,971,959 ounces, and the coinage of China, as reported to the bureau, required 52,077,305 fine ounces, or together, 99,049,261 ounces. The remainder, 28,841,771, plus existing stocks at the beginning of the year, was available for industrial consumption.

Summarizing the foregoing the results appear as given below. The bureau is of the opinion that the European figures as to gold are above rather than below the consumption of new gold and coin:

World's industrial consumption, 1912.

Country.	Gold.	Silver.
		Fine ounces.
United States	$35,800,000	20,000,000
Germany	20,000,000	10,000,000
United Kingdom	18,000,000	10,000,000
France	17,500,000	9,000,000
Switzerland	8,000,000	2,000,000
Austria-Hungary	5,000,000	2,000,000
Russia (including Finland)	5,000,000	4,000,000
Italy	3,500,000	1,500,000
Belgium and the Netherlands	3,000,000	5,000,000
Denmark, Norway, and Sweden	1,000,000	600,000
Spain and Portugal	1,800,000	1,000,000
Australia and New Zealand	2,000,000	900,000
Canada	2,500,000	900,000
Other countries of Europe and the Americas	1,000,000	1,000,000
Total	124,100,000	67,900,000
Egypt and Asia	50,000,000	28,841,771
Grand total	174,100,000	96,741,771

The bureau's revised estimate for the gold production of the world in 1912 is approximately $466,000,000. These figures are conservative, more likely a little under than over, although the information at hand does not warrant raising them. The net coinage was approximately $325,907,948 (p. 104). The industrial consumption, as calculated above, was $174,000,000, of which, however, approximately $20,000, 000 was figured to be in coin, giving a net consumption in bullion of $154,000,000.

The coinage and consumption of bullion in the arts, including the Asiatic imports of bullion, thus work out approximately $480,000,000, which seems to have exceeded production by about $14,000,000. It is to be considered, however, that there are usually $300,000,000 to $400,000,000 of bullion in the institutions of issue and that the coinage of a given year may easily vary $25,000,000, or even $50,000,000 above or below the amount available for coinage from that year's production. It is evident that no balanced statement of production and consumption can be made without taking into account the bullion stocks at the beginning and end of the year.

The same rough calculation as to silver shows a net coinage requiring approximately 142,000,000 ounces, and an industrial consumption including Asiatic absorption, of about 99,000,000 ounces.

The total of these is about 242,000,000 ounces, which exceeds the estimated production of the year by about 18,000,000 ounces. Again, however, it must be said that such efforts to balance production and consumption for a single year are of little value unless the stocks at the beginning and end of the year can be compared.

STOCK OF MONEY IN THE UNITED STATES.

On December 31, 1912, the stock of domestic coin in the United States was $2,363,468,061, as shown by the following official table:

Item.	Gold.	Silver.	Total.
Estimated stock of coin Dec. 31, 1911	$1,616,538,976	$733,660,507	$2,350,199,483
Net imports United States coin, calendar year 1912		1,808,032	1,808,032
Coinage, calendar year 1912	17,498,523	7,340,995	24,839,518
Total	1,634,037,499	742,809,534	2,376,847,033
Less:			
United States coin melted for recoinage (face value), calendar year 1912	2,656,800	620,843	3,277,643
United States coin estimated to have been used in the arts calendar year 1912	3,500,000	100,000	3,600,000
Net exports United States coin calendar year 1912	6,501,329		6,501,329
Total	12,658,129	720,843	13,378,972
Estimated stock of coin in United States Dec. 31, 1912	1,621,379,370	742,088,691	2,363,468,061

NOTE.—The number of standard silver dollars coined to Dec. 31, 1912, was 570,272,610, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 571,419,469. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; and since 1883 the number melted has been 191,308 (see Report of the Director of the Mint, 1912, p. 65) and the number of Hawaiian dollars melted to Dec. 31, 1912, has been 455,141, a total disposition of 3,141,449, leaving in the United States on Dec. 31, 1912, 568,278,020 standard silver dollars and $173,810,671 in subsidiary silver coins.

The value of the gold and silver bullion held by the Government institutions on December 31, 1912, was as follows:

Gold and silver bullion in the mints and assay offices on Dec. 31, 1912.

Bullion.	Value.
Gold	$258,857,946
Silver (cost)	1,703,780
Total	260,561,726

The total metallic stock in the United States was as follows:

Metallic stock in the United States on Dec. 31, 1912.

Bullion and coin.	Value.
Gold	$1,880,237,316
Silver	743,792,471
Total	2,624,029,787

The location of the stock of metallic and paper money in the United States on December 31, 1912, was as follows:

Money.	In Treasury.	Outside of Treasury.	Total.
Metallic:			
Gold bullion	$258,857,946		$258,857,946
Silver bullion	1,703,780		1,703,780
Gold coin	995,209,422	$626,169,948	1,621,379,370
Silver dollars	493,460,533	74,817,487	568,278,020
Subsidiary silver coin	17,960,354	155,850,317	173,810,671
Total metallic	1,767,192,035	856,837,752	2,624,029,787
Paper:

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1912 is from the annual circular issued by Messrs. Sharp & Wilkins, bullion brokers of London, England:

The history of silver for the year 1912 is the record of the varying views and opinions of the market as influenced in the first place by the expectation of development in China, and the large loans which were expected to be required to enable the Government of the new Republic there to bring the country into order, to pay and disband the troops, and to reestablish the ordinary routine of life after the upheaval of the revolution of the previous year.

The second great influence was the feeling, amounting almost to certainty, that the Government of India could not allow their reserve of rupee currency to run much lower, as in the early part of the year there was such a continual call for rupees that the reserve ran down as low as 11½ crores in May, and it was recognized that some buying of silver for India coinage was sure to take place before long. The extent to which this might be necessary was naturally dependent, in a large measure, upon the character of the monsoon, a good season in India making for a large use of rupees, whereas a poor monsoon might have made it possible to postpone coining for some time longer.

The expectations as to China loans have on the whole been disappointing, and hopes and fears have alternated more or less all through the year, and even at the end the problem is unsolved. From time to time it seemed as though all difficulties had been surmounted, but the conditions, political and financial, which arose again and again, threw back the subject to its old uncertainty. The equal participation of the six powers, and the conditions required by them, made many points to be discussed, and when at last these were settled, the Chinese Government refused to proceed on the lines laid down,

and attempted the reorganization of their finances with other lenders Concession to Belgium for a railway loan of £10,000,000, and the bringing out of a loan in London for the same amount, to be issued in two portions of £5,000,000 each, seemed to show that the endeavor of the six powers would result in failure, but the difficulties experienced with these smaller ventures has induced the Chinese Government again to approach the strong group, so that once more there seems a probability that the reorganization scheme, even if reduced in scope, will take place sooner or later.

On the whole, silver has been bought for these Chinese operations, but when the rupture of these negotiations took place, an important amount of silver, stored in anticipation, was parted with at much higher prices then when it was acquired.

With regard to India, the anticipations of the market have been amply realized, and the Government there has been forced to obtain a very large amount of silver, thereby justifying those who for a long time had foreseen that it would be so. The operations were carried out with great secrecy, but have resulted, as was only to be expected, in a large increase in the price of the metal, and the fact that the monsoon turned out to be an exceptionally good one, producing abundant crops, made it clear to all that a large provision would have to be made for the call on the currency reserve which might be looked for.

The year opened with the price of silver at 25⅛ and 25¼ for cash and two months delivery, and gradually improved during January and early February, on a good deal of China support and orders from Indian bazaars in anticipation of higher rates, until February 13, on which date the figure had advanced to 27⅞ and 27⅝, the discount on cash being replaced by a premium, sellers finding it necessary to cover their commitments as they fell due in a market where cash supply was not offered plentifully. As the position was cleared the price gave way a little, and by March 4 was only 26¾ and 26⅝, but from this time forward a quiet absorption of supplies began to take place, due, as was subsequently ascertained, to the purchases for the Indian Government, and large orders from the bazaars taking place at the same time, raised the price again, so that on April 30 the quotation had mounted to 28 3/16 and ⅜.

Smaller buying in May did not influence the market so much, but June brought a renewal of activity and the figures rose to 28 9/16 and 28 11/16.

Very little was bought for the Government in July, and the market felt the change, and rates receded to 27¾ and 27⅞, but the purchase of over £3,000,000 in August and September, together with an active bazaar inquiry, carried the price still further, and the highest level of the year was reached on October 8, 29⅝ and 29 11/16, for cash and forward, respectively.

During the rest of October rates fell but little, being quoted on an average about 29¼, and a further £1,000,000 was acquired for India in November rather below this price, many operators in the Bombay bazaars parting with their holdings, prompted, no doubt, by the feeling that the needs of the Government had been to some extent provided for. Early in December, however, some large buying took

place for immediate shipment to the East, and caused such a scarity of available ready silver that as much as $\frac{3}{8}$ premium was paid for some important parcels, and the quotation on December 10 was as high as $29\frac{11}{16}$ for cash, and $29\frac{1}{2}$ for two months.

The closing weeks of the year, however, were marked by weakness, and the dearness of money soon changed the premium on ready silver to a discount, whilst heavy selling from both India and China depressed the market, and the closing prices (Dec. 30) are $28\frac{15}{16}$ and $29\frac{1}{8}$ per ounce standard for ready and forward respectively.

The production of silver has been but little greater than last year when expressed in ounces, but the enhanced price has naturally made an appreciable increase in value. China sold an amount estimated at about one million and a half sterling in September at high rates, and a new source of supply, about £800,000, was found in shipments of dollars from Mexico when the price of standard silver ranged from 29 to $29\frac{1}{2}$, and the sale of about £270,000 of silver resulting from a surplus on recoinage in Austria, was a noteworthy addition to the normal supplies in the market.

There has been during the year a good demand for the contingent, shipments to Germany amounting to £930,000, to France £350,000, to Portugal £150,000, to Russia and Central Asia £970,000, whilst Brazil has required £200,000, and the English mint has not been inactive, £650,000 of English coin having been sent away to the colonies.

The future prospects of the market are obscure, so much depending on the policy to be pursued by China, but it is fairly certain that a continuance of quiet government there will tend to an increase of exports, as the season has been an exceptionally good one, and crops are excellent. The question of a loan of magnitude, said to be £25,000,000, is again to the front, and if the Chinese Government can overcome its reluctance to give adequate safeguards for the proper use of the money, the assistance required will be forthcoming, and induce a largely increased use for silver, with a consequent benefit in our market.

A great proportion of the stocks of silver accumulated in London, India, and China, which had been looked upon as a menace in case of adverse influences, has been cleared away by the large rupee coinage of this year, which has left the market in a much more healthy condition, and as good amounts of silver are continuously required for coinage and the arts, it seems likely that rates will be sustained at a higher figure than formerly, and although prices may not quite keep up to their present high level, we do not expect them to give way much, as there is a reasonable probability that consumption will keep pace with production, and secure a good market for silver in the months to come.

Highest, lowest, and average price of silver bullion and value of a fine ounce each month during the calendar year 1912.

Month.	Highest.	Lowest.	Average price per ounce, British standard, 0.925.	Equivalent value of a fine ounce with exchange at par, $4.8665.	Average monthly price at New York exchange on London.	Equivalent value of a fine ounce based on average monthly price and average rate of exchange.	Average monthly price of fine bar silver.

NOTE.—The quantities in the column "net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

IMPORTS AND EXPORTS OF BULLION INTO AND FROM LONDON.

The imports and exports of bullion from and to various countries at London during the calendar year 1912 were as follows:

Countries.	Imports.		Exports.	
	Gold.	Silver.	Gold.	Silver.
Austria	$3,510,897	$22,844	$513,050	$134,607

Commercial ratio of silver to gold each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, and since from daily London quotations.]

PRODUCTION OF GOLD AND SILVER IN FOREIGN COUNTRIES.

NORTH AMERICA.

British North America.

The report of the department of mines, Ottawa, Canada, gives the production of gold and silver in British North America for 1912, by Provinces, as follows:

Provinces.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Nova Scotia	4,385	$90,638	.....	.....
Quebec	642	13,270	9,367	$5,758
Ontario	86,523	1,788,596	28,912,237	17,772,352
Alberta	73	1,509	.....	.....
British Columbia	251,815	5,205,485	2,623,616	1,612,737
Yukon	268,447	5,549,296	80,231	49,318
Total	611,885	12,648,794	31,625,451	19,440,165

GOLD.

The total value of the production of gold in 1912 was $12,648,794, representing 611,885 fine ounces, as compared with $9,781,077, representing 473,159 fine ounces of metal in 1911.

The Yukon placer production in 1912 was 267,988 fine ounces, valued at $5,539,808.

Of the total production in 1912 about $6,106,677 were derived from alluvial workings; $2,270,331 as bullion from milling ores; and $4,271,786 from ores and concentrates sent to smelters. In 1911, $5,014,207 were derived from alluvial workings; $513,991 as bullion from milling ores; and $4,252,879 from ores and concentrates sent to smelters.

The exports of gold-bearing dust, quartz, nuggets, and gold in ore, etc., in 1912, were valued at $10,014,654, as against $7,493,523 in 1911. The gold and silver production of British Columbia was chiefly from copper matte exported to the United States.

The imports of gold coin during the calendar year 1912 were $7,496,492 and of gold bullion $1,360,735.

SILVER.

The production of silver contained in bullion, or estimated as recovered from mattes and ore, etc., exported was, in 1912, 31,955,560 fine ounces, valued at $19,440,165, as compared with a production of 32,559,044 fine ounces, valued at $17,355,272 in 1911. About 91.4

per cent of the production in 1912 was derived from "Cobalt district" of Ontario. The production of silver in 1905 was only 6,000,023 ounces and in 1900 4,468,225 ounces. The exports of silver contained in ores, mattes, etc., in 1912 were 34,911,922 ounces, valued at $19,494,416, as against exports of 31,216,725 ounces, valued at $15,807,366 in 1911. The imports of silver bullion during the calendar year 1912 were valued at $1,100,344, as compared with bullion imports of $847,645 in 1911.

COST OF PRODUCING SILVER IN THE COBALT DISTRICT.

The annual report of the Nipissing Mining Co., one of the principal producing companies of the Cobalt district, Canada, for 1912, shows that it produced 4,688,261 ounces of silver, which sold at an average price of 61.457 cents per ounce. General operation expenses were equivalent to 12.08 cents per ounce. The total cost per ounce was 18.46 cents, reduced by rent and interest receipts to 17.39 cents.

PROGRESS OF MINING IN BRITISH COLUMBIA.

[From annual report of the minister of mines for the year ending Dec. 31, 1912.]

GOLD.

Placer gold.—The production of placer gold during the past year was worth about $555,500, as nearly as can be ascertained. Great difficulty is found in obtaining reliable figures, since the work is in many cases carried out by individuals or unorganized groups of men who keep no books, frequently paying wages, or for supplies, in gold dust, which, being readily transported, is scattered, and the tax imposed thereon by law is thus evaded.

The production of 1911 was the lowest recorded in 17 years, or since 1894, but this year's output shows a decided improvement—an increase, as compared with 1911, of $129,500—and is, in fact, the greatest production of placer gold since 1908.

As was noted in 1911, the weather conditions during the latter part of the season were such as to prevent the usual "clean ups," and it is probable that much gold then uncollected has been recovered this season, which would partly account for this year's higher production, all of which goes to illustrate how dependent the industry is on the weather conditions.

The known and available placer deposits are undoubtedly becoming exhausted, and until new camps shall have been discovered the placer-gold output may be expected to continue diminishing.

There have been reported discoveries of new placer fields in Cassiar the past season, but as yet their value has not been tested by actual workings.

Practically all the placer gold was obtained in the Atlin and Cariboo districts, the former being credited with a production of $290,000 and the latter with $238,000, leaving but a small balance for the remainder of the Province.

Gold from lode mining.—The value of the gold from lode mining in the Province during the year 1912 was $5,322,442, an increase, as compared with the previous year, of $596,929, or about 12.6 per cent. Increases in lode-gold production have been made this year in the Boundary, due to an increased tonnage of ore mined, and in the Rossland camp, due to the higher assay value of the ore treated. The

Nelson mining division about held its own this year, but there has been a decreased production in the coast district.

The following are the values of the gold product of the three most important camps: Rossland, $2,729,949; Boundary, $2,167,229; and Nelson, $361,994. About 75 per cent of the gold production of the Province is obtained from the smelting of copper-bearing ores, the remainder from stamp milling.

SILVER

The total amount of silver produced in the Province during the year 1912 was 3,132,108 ounces, valued at $1,810,045, an increase in amount, as compared with the previous year, of 1,239,744 ounces, and in value of $851,752.

The year 1911 showed an unduly low production of silver owing to the labor troubles at the collieries shutting off the coke supply and so closing down the smelters, so it is fairer to make a comparison with earlier years. The silver output of 1912 is the greatest we have had since 1905, and exceeds that of 1910, a normal year, by 681,867 ounces in quantity and by $565,029 in value.

A very large proportion of the silver produced in the Province is found associated with lead-bearing ores, chiefly in the Slocan district, where a few mines are still handicapped by lack of transportation facilities, owing to forest fires having destroyed the Kaslo & Slocan Railway, and, in some instances, the plants of the mines.

Mexico.

The diplomatic representatives of the United States at the City of Mexico have not furnished this bureau with the usual production figures for 1912, and resort has been taken to other available information, principally the export and coinage figures of Mexico, together with the known importations of gold and silver from Mexico by the United States and Great Britain.

The production is estimated at $24,500,000 gold and 74,640,300 fine ounces of silver.

Central American States.

The production of gold and silver in the Central American States is usually arrived at by assuming that their export figures represent their product. The following table is compiled, for the most part, from United States import figures:

States.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Costa Rica	27,061	$559,406	578,861	$355,826
Guatemala	671	13,865		
Honduras	10,100	208,790	2,108,813	1,296,287
Nicaragua	43,818	905,795	37,231	22,886
Panama	6,807	140,717	118,435	72,802
Salvador	58,137	1,201,792	2,614	1,607
Total	146,594	3,030,365	2,845,954	1,749,408

Costa Rica.

The returns from Costa Rica state that the gold and silver produced from mines of the country during the year 1912 was as follows: From deep mines, gold, $461,722; silver, $355,826.

The Government of Costa Rica has no department of mines, and therefore no accurate mining statistics. From available statistics it is impossible to estimate the weight of gold and silver in kilograms, fine, as called for.

The imports of gold ore and bullion from Costa Rica into the United States during 1912 amounted to $559,406, which is accepted in lieu of the above statement as the gold product for 1912.

Guatemala.

The importation of gold ore and base bullion into the United States from Guatemala in 1912 was valued at $13,865, which amount is accepted as the product of that State.

Honduras.

The returns from Honduras state that the value of gold and silver produced from mines of the country during 1912 was as follows: Gold, $6,532.85; silver, $1,296,286.63.

The imports of gold bullion and gold in ore into the United States from Honduras during the year 1912 were valued at $208,790, which amount is accepted as the product of that State.

Nicaragua.

The American minister at Nicaragua reports that the gold and silver produced from mines of the country during 1912 was as follows: Gold, 2,345.808 kilograms, fine, valued at $905,794.35; silver, 1,398.744 kilograms, fine, valued at $22,886.01

The total domestic production was exported largely to United States and England.

Panama.

Gold produced from mines of the country during 1912 was as follows:

Product for 1912.	Kilograms (fine).	Value.
Domestic production:		
From deep mines	2,748.430	$134,975.30
From dry or silicious ores	24.832	5,175.30
From copper ores	2.951	566.00
Total	2,776.213	140,716.60

The imports of silver bullion and ore into the United States from Panama were valued at $72,802.

SALVADOR.

The figures of the imports from Salvador furnished this bureau by the United States Bureau of Statistics, Department of Commerce, were as follows: Imports, gold, bullion, and ore, $1,201,792; silver, $1,607.

SOUTH AMERICA.

ARGENTINA.

The American consul general at Buenos Aires reports that the gold and silver produced from mines of the country in 1912 was as follows: Gold, 21.444 kilograms, fine, valued at 11,965.75 pesos;[1] silver, 1,026.190 kilograms, fine, valued at 16,419.02 pesos.[1]

This data, with respect to the production of gold, is not complete, as the alluvions auriferous, in accordance with Argentine law, is for public use, by virtue of which the greater part of the gold obtained can not be estimated.

The report of the United States Bureau of Statistics, Department of Commerce, shows that the imports of gold bullion were valued at $107,350 and of silver bullion $50,403, representing 5,193 fine ounces for the gold and 81,996 for the silver.

BOLIVIA AND CHILE.

The report from the legation of the United States at La Paz, Bolivia, was as follows: Gold and silver produced from mines of the country during the calendar year 1912:[2] Gold, from placer mining, 2,435.520 ounces, fine; silver, from deep mines, 1,906,913 ounces, fine.

No report was received from Chile.

In estimating the product of gold and silver in Bolivia and Chile by this bureau, it has been the custom to accept the import figures from those countries by other countries plus their coinages as the probable production.

Bolivia is compelled to export through some port of Peru or Chile, and consequently does not get credit for her exports, thus making it almost impossible to separate Bolivia's product from Chile's.

The following table gives the value of gold and silver bullion and ore imported from Bolivia and Chile during the calendar year 1912:

Country.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Great Britain	428	$8,857	2,228,662	$1,369,969
United States	8,039	166,184	1,821,194	1,119,488
Total	8,467	175,041	4,049,856	2,489,457

[1] Argentine gold.
[2] In order to get ounces, the kilograms were multiplied by 31.103 grains.

There was no gold or silver coinage reported for either Bolivia or Chile.

Consul Alfred A. Winslow, Valparaiso, in Daily Consular and Trade Reports, for March, 1913, states that in 1911 the production of gold in Chile was $365,058 and in silver $419,746.

[Chargé d'Affaires Charles E. Stangeland, American Legation, La Paz, in Daily Consular and Trade Reports, August 20, 1913.]

The production of gold in Bolivia is of small importance, but Señor Don Castro Rojas, the director general of customs, declares that Bolivia will yet surprise the world with its production of this metal. That the statistics of gold and probably other minerals are only approximations and subject to large errors is seen in the figures provided by the statistical office and in those of the customs office. For 1911 the customs office gives the gold production as 35.6 kilos (78.5 pounds avoirdupois), while the statistical office states that it was only 9.4 kilos (20.7 pounds avoirdupois). In 1895 the production amounted to 450 kilos (992 pounds). It remained at about this level, according to the bulletin of the statistical office until 1904, when it appears to have dropped to less than one-tenth of what it had been. Mr. Rojas's view may be proved to be well founded in this and next year, but it is too early to make definite predictions.

Bolivia's gold and silver exports for the last two years have been as follows:

Classification.	1911.	1912.
Gold	$22,313	$23,039
Silver	1,784,633	1,676,704

Brazil.

The production of silver is practically nil, the small amount produced being that which is found mixed with the gold in the mines. No statistics are collected as to the amount of gold produced, but an approximation can be arrived at from the export figures, discounting therefrom a considerable amount—almost exclusively the product of placer mines—which is used within the country in the manufacture of jewelry, and upon which, unfortunately, no figures are available.

There are only two large, deep mines in the country, and these, being nearer Rio de Janeiro than any other large port, their product is shipped therefrom and amounts to 4,014,175 grams, valued at 6,524,660 milreis.

The other mines are almost without exception placer mines and their product is exported from the ports of Maranhao and Santos, as follows:

Ports.	Quantity.	Value.
	Grams.	*Milreis.*
Maranhao	10,600	11,645
Santos	2,000	3,250
Total	12,600	14,895

The small silver export is entirely from Rio, and amounts to 842,344 grams, valued at 45,721 milreis. (The total value of these exports was 6,585,276 milreis, or $3,595,561 in United States money) representing for the gold $3,570,597 or 172,728 fine ounces, and for the silver $24,963, or 40,610 fine ounces.

Brazil has no colonies, and no dry or siliceous lead or copper ores are produced.

COLOMBIA.

No official information has been received from Colombia regarding the production of gold and silver during 1912.

The exports of ore and bullion from Colombia in 1912 were as follows:

Country.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
United States	86,899	$1,796,354	69,115	$42,485
Great Britain	54,125	1,118,863	518,563	318,764
Germany	2,733	56,496	.....	.....
Total	143,757	2,971,713	587,678	361,249

In the absence of any production figures the above export figures are accepted as the product for 1912.

PROGRESS OF MINING IN COLOMBIA.

By SILAS WRIGHT.

[From The Engineering and Mining Journal, New York, Feb. 22, 1913.]

The total production of gold, silver, and platinum of the department of Antioquia in 1912 was approximately $3,500,000, somewhat less than in previous years. This total represents principally gold resulting from both quartz and placer operations, throughout the entire department of Antioquia proper, which includes the mining districts of Manizales as well, although this now is part of the department of Caldas. The greater part of this gold is shipped to New York and to London, monthly shipments of gold bars from Medellin being from $150,000 to $300,000. The quartz regions of Antioquia are as a rule in the higher and more healthful regions, while the placers are lower down along the rich alluvial streams where often unhealthy conditions prevail. Platinum is found in paying quantities only in the Atrato region, and it is mined by the natives in a desultory way by washing the sands and river gravels. Silver is mined only as found with gold in certain places, as at the Zancudo mines.

* * * * * * *

ECUADOR.

Gold produced from mines of the country during 1912: From Zaruma mines, dry or silicious ores, valued at 835,338 sucres (weight not reported).

The value of the above product in United States money is $406,517, representing 19,665 fine ounces. As no information was received regarding the silver products the figures for 1909 (the latest returns), viz, 22,642 fine ounces of the commercial value of $13,918, are repeated for 1912.

The Guianas.

BRITISH GUIANA.

The American consul at Georgetown reports that the gold produced from mines of the country during 1912 was as follows: From deep mines, 1,574 ounces; from hydraulicing and dredging, 9,821 ounces; and from placer washings, 38,879 ounces; a total of 50,274 ounces, valued at $879,790.51. This valuation represents 42,560 fine ounces.

No silver produced. There was exported to Great Britain, silver in ore, of the value of £91,480, equivalent to $445,187, representing 724,235 fine ounces.

DUTCH GUIANA.

The American consul at Georgetown states that the gold produced from mines of the country during the calendar year 1912 was as follows: Gold, from placer mining, 23,897 ounces, valued at $407,273. The value represents 19,702 fine ounces.

FRENCH GUIANA.

The American ambassador at Paris reports that the gold produced in French Guiana during 1912 was 4,589 kilograms, fine, valued at 15,806,000 francs, which represent $3,050,558 in United States money, or 147,571 fine ounces.

Peru.

The American minister at Lima reports that the gold production in 1911 was 741,219 kilograms, valued at £101,152 (Peruvian pounds). This value represents $492,256, equivalent to 23,813 fine ounces.

The silver product weighed 289,383 kilograms, the commercial value of which was £926,712 (Peruvian), which is equal to $4,509,844, representing 8,351,563 fine ounces. This product is repeated for 1912. The commercial value of the silver for 1912 is $5,133,706.

Gold Production of Peru in 1911.

[From Estadistica Minera del Peru en 1911, Mining Statistics of Peru in 1911.]

The production of gold in the year 1911 amounted to 741,219 kilograms, compared with 707,923 kilograms in 1910, making an increase of 33,296 kilograms.

This increase proceeded principally from the larger production of copper in the department of Junin, which is known to carry an appreciable amount of gold and silver.

Résumé of the product of gold in 1911.

Description.	Weight of the gold contained.	Commercial value.
	Kilograms.	*Peruvian pounds.*
Bars of smelted gold	117,913	16,103 2 60
Gold beads and gold dust from placers	169,506	23,149 2 65
Amalgams (crude)	12,548	1,713 6 40
Gold and silver bars	8,330	1,126 6 28
Silver bars and cone-shaped silver	8,140	1,111 6 80
Copper bars	368,839	50,371 1 47
Silver sulphides	19,353	2,642 7 82
Copper matte	1,222	166 8 87
Gold ore	16,386	2,173 0 31
Silver and copper ore	18,982	2,593 8 11
Total	741,219	101,152 1 31

The valuation of this product has been made, as in previous years, by calculating the gold at the price of 136–5–69 Peruvian pounds per kilogram, fine, which value was derived from the weight of fine gold contained in the Peruvian pound of 7.32228 grams.

In valuing the gold contained in the gold ores they have deducted the amount of the expenses which would attend their exportation and sale in Europe. In the other products, where the gold exists as a secondary species, they have considered their integral value, but the expenses are indemnified by the accompanying metals.

The gold bullion, whether melted into bars or derived from washings, has not been decreased because of its gratuitous coinage in the mint.

Production of gold and its value, from 1903 to 1911, inclusive.

Year.	Fine weight.	Commercial value.	Year.	Fine weight.	Commercial value.
	Kilograms.	*Peruvian pounds.*		*Kilograms.*	*Peruvian pounds.*
1903	1,078	145,205	1909	554	75,603
1904	601	75,102	1910	708	96,612
1905	777	106,062	1911	741	101,152
1906	1,247	170,355			
1907	778	106,205	Total (9 years)	7,461	1,009,332
1908	977	133,036			

SILVER.

The production of silver in 1911 was 289,383 kilograms, or 36,818 kilograms more than in 1910. This increase was owing principally to the larger production in the departments of Junin and Lima, whose richest enterprises, The Cerro de Pasco Mining Co. and The Bachus & Johnston Co., have developed their works in considerable proportion. Also in the departments of Ancachs and Arequipa they have increased their production somewhat. With respect to the other departments they have either remained stationary or they have decreased their production.

Résumé of the product of silver in 1911.

Description.	Weight of the silver contained.	Commercial value.
	Kilograms.	*Peruvian pounds.*
Copper matte	129,851.003	429,413- 5- 18
Copper bars	71,059.992	238,582- 5- 30
Sulphides from lixiviation	25,935.690	87,108- 9- 60
Silver and copper ores	16,703.787	39,466- 2- 40
Silver and lead ores	15,840.579	39,643- 9- 60
Silver ore and silver concentrates	16,340.353	45,170- 0- 40
Silver in bars and cones	9,380.720	32,412- 6- 69
Gold and silver bars	9.087	32- 0- 00
Copper cement	83.525	289- 7- 34
Lead slags	123.000	438- 1- 26
Lead bars	4,055.230	14,155- 0- 32
Total	289,382.966	926,712- 8- 09

The price of silver in 1911 was as follows:

Price of silver.	In New York.	In London.
	Cents.[1]	*Pence.*[2]
Highest price	56.750	26.125
Lowest price	51.125	23.687
Average price	53.287	24.602

[1] Per fine ounce, troy. [2] Per standard ounce, troy (0.925 fine).

These are the prices that have served as a basis for valuing the silver product. The silver bullion in bars and cones was calculated with a deduction of 3 per cent for expenses of exportation; the silver contents of the copper and lead bars with a deduction of 2 per cent for refining, charging the remaining expenses to the copper and lead, which were the principal metals contained therein; the silver contained in matte by deducting 1 penny (English) from the value of a troy ounce, which is the customary deduction in Europe, and by deducting a portion of the expenses of exportation, the remainder being charged to copper.

In the properly called silver ores they deducted all the expenses which would attend their sale in European markets; in the copper and lead ores those expenses have been divided between the copper and the lead in proportion to the value pertaining to each metal.

The silver product, its weight, value, and average price per kilogram, fine, from 1903 to 1911, inclusive.

Year.	Weight.	Commercial value.	Price per kilogram, fine.
	Kilograms.	*Peruvian pounds.*	*Peruvian pounds.*
1903	170,804	579,963	3- 8- 08
1904	145,166	530,875	3- 8- 08
1905	191,476	729,444	4- 0- 40
1906	230,294	972,958	4- 4- 48
1907	207,810	869,238	4- 3- 70
1908	199,891	651,191	3- 5- 35
1909	207,656	639,650	3- 4- 31
1910	252,565	795,370	3- 5- 73

Total (9 years)	1,895,045	6,695,402	.....

URUGUAY.

The American minister at Montevideo states that the gold produced in 1912 was 167 kilograms, equivalent to 5,369 fine ounces, valued at $110,987.

VENEZUELA.

The imports of gold and silver bullion and ore from Venezuela into Great Britain and the United States in 1912 were as follows:

Country.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Great Britain	27,215	$562,582	122,303	$75,179
United States	2,947	60,924	.....	.....
Total	30,162	623,506	122,303	75,179

GOLD MINES OF VENEZUELA.

[From Bulletin of the Pan American Union, March, 1913.]

The Petaquire gold mines are probably the oldest auriferous mining property in the Republic, having been discovered and worked in 1560 and 1561. From 1573 to 1580 these mines were profitably exploited, but after that time work was suspended and the mines remained untouched until 1839, when they were rediscovered by means of ancient charts and descriptions, but during the interval of 73 years thereafter were again left untouched. The property has recently been opened and work has again been commenced in the old shafts and galleries, and tunnels which have been found practically intact. Recent reports are very flattering as to the future of these mines. The surrounding district is a highly mineralized gold region and it is predicted that considerable gold mining activity will be developed in that part of Venezuela in the near future.

EUROPE.

AUSTRIA-HUNGARY.

The American consul general at Vienna reports that the gold and silver product of Austria was as follows:

1912.	Gold.		Silver.	
	Kilograms (fine).	Value.	Kilograms (fine).	Value.
Domestic production:		*Crowns.*		*Crowns.*
From deep mines	267	822,271	.....	.....
From dry or siliceous ores	.....	.....	35,693	3,533,500
From lead ores	.....	.....	11,700	1,158,380
From copper ores	.....	.....	88	8,805
From gold ores (a by-product)	.....	.....	96	9,373
Total	267	822,271	47,577	4,710,058

HUNGARY.

The gold and silver product of Hungary during 1912 was as follows:

Items.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
		Crowns.		*Crowns.*
From deep mines	2,811.84845	9,222,862.91	9,002.598	862,508.99
From placer mines	6.08106	19,945.87	.....	.....
Total	2,817.92951	9,242,808.78	9,002.598	862,508.99

In the Hungarian refineries there were produced during 1912:

Item.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
		Crowns.		*Crowns.*
Refinery product	770.23323	2,526,364.99	9,967.977	955,330.91

One kilogram of fine gold is calculated at 3,280 crowns, and 1 kilogram of silver at 95.84 crowns, by law.

The products of both Austria and Hungary are estimated to have been as follows:

Country.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Austria	8,075	$166,921	1,555,461	$956,142
Hungary	90,765	1,876,290	284,836	175,089
Total	98,840	2,043,211	1,840,297	1,131,231

BELGIUM.

Product of 1912.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
		Francs.		*Francs.*
National production:				
From deep mines and placer mines	[1] 1,268	[2] 4,367,549.92	96,459	[3]
From dry or siliceous ores	.....	.....	165,061	[3]
From lead ores (imported)	.....	.....	.....	.....

[1] This does not apply to Belgium. Nevertheless, from silver ores and pig lead imported and treated in the plants (smelters) of the country there were extracted in 1912, 1,268 kilograms of fine gold. There are no mines of precious metals in Belgium.

[2] Value at 3,444.44 francs per kilogram, fine.

[3] The value is taken from the quotations of London and Paris in 1912, from 80 to 90 francs per kilogram, fine.

Colonial production (Boma, Kongo).

Product of 1912.	Gold.		Silver.	
	Kilograms.	Value.	Kilograms.	Value.
From deep mines and placer mines	899.360	*Francs.* 3,091,000	112.800	*Francs.* 11,506

FRANCE.

The American ambassador at Paris reports that the gold product for 1911 was 2,726 kilograms fine, valued at 9,389,000 francs, equivalent to $1,812,077 in United States money, representing 87,659 fine ounces. The silver product was 15,043 kilograms fine, of the commercial value of 1,369,000 francs, equivalent to $232,108 in United States commercial value, representing 429,831 fine ounces.

The above quantities are repeated for 1912, the value of the silver being $264,217.

As to silver, French smelting works produced in 1911 42,227 kilograms, of a value of 4,300,000 francs. The native production of the mines is included in these figures.

GERMANY.

The American ambassador at Berlin reports that the gold and silver production of Germany for 1911 was 117.54 kilograms of fine gold and 155,044.39 kilograms of fine silver, from native ores. The weight of the gold is equivalent to 3,778.911 fine ounces, representing $78,117, and the silver is equivalent to 4,984,677 fine ounces, of the commercial value of $2,691,726. In the absence of detailed information the figures for domestic production for 1911 are repeated for 1912, the silver valuation being $3,064,081.

The smelting-house product of gold and silver in the years 1911 and 1912 was as follows:

Fine gold extracted.	Weight.	Value.	Fine silver extracted.	Weight.	Value.
	Kilograms.	*Marks.*		*Kilograms.*	*Marks.*
1911	4,967.090	13,874,000	1911	439,579.99	32,133,000
1912	7,730.470	21,574,000	1912	595,469.40	48,886,000

The figures of 1912 are higher because in 1912 the amounts obtained from old material and foreign by-products were taken account of, while in former years only the output of inland and foreign metal and scrap was counted.

The separation of the different sources from which the gold and silver is obtained is no more a feature of the statistical reports upon the subject.

GREAT BRITIAN.

The American ambassador at London reports that the gold product of Great Britian for 1912 was valued at £5,709, which is equivalent to $27,773, representing 1,344 fine ounces. The silver product was 113,769 fine ounces, of the commercial value of $69,990.

The British Home Office has issued advance sheets giving the statistics for 1912 of the mines operated under the metalliferous mines act. The gold production for 1911 and 1912 was as follows:

Classification.	1911	1912	Decrease.
	Long tons.	*Long tons.*	*Long tons.*
Gold ore	2,752	107	2,582

The mining of gold nearly ceased in 1912.

GREECE.

According to the Statistique de L'Industrie Minerale, Paris, 1913, the silver product of Greece for the year 1911 was 25,000 kilograms, which is equivalent to 803,750 fine ounces, of the commercial value of $434,025. The same quantity, 803,750 ounces, is repeated for 1912, valued at $494,065, according to the average price of silver for that year.

Production of silver in Greece, 1906–1910, inclusive.

[From the French Mint report for 1912.]

Year.	Weight.	Value.
	Kilograms.	*Francs.*
1906	32,360	2,179,122
1907	21,907	2,414,000
1908	24,887	2,190,056
1909	24,690	2,518,380
1910	27,352	2,461,600

ITALY.

The American embassy at Rome reports that the gold and silver produced from mines of the country during 1912 was as follows: Gold, 37,200 grams, valued at 57,209 lire, which is equivalent to $11,041 in United States money, representing 534 fine ounces. The silver product was 14,363 grams, valued at 1,426,108 lire, equivalent to $275,239, representing 447,761 fine ounces.

NORWAY.

The American consul general's office at Christiania reports that the silver produced from mines of the country during 1912 was 290,928 ounces, valued at 568,804.74 crowns, equivalent to $152,439, representing 247,988 fine ounces.

PRODUCTION OF GOLD AND SILVER IN NORWAY, 1907–1911, INCLUSIVE.

[From the French Mint Report for 1912.]

The production of gold in Norway is of small importance; in the best years it scarcely amounted to 15 kilograms; in the year 1910, to 1,027 kilograms.

With regard to silver, the quantities produced from the mines of the country during the last five years were as follows:

Year.	Weight.	Commercial value.
	Kilograms.	*Crowns.*
1907	6,665	510,000
1908	7,269	530,000
1909	7,976	497,000
1910	8,076	520,000
1911	8,725	541,000

PORTUGAL.

The American minister at Lisbon reports that the gold and silver produced from mines of the country during 1912 was as follows: Gold, 3.514 kilograms, fine, valued at $2,333, representing 113 fine ounces; silver, 4,646 kilograms, fine, valued at $126,519, representing 205,822 fine ounces.

RUSSIA.

The American ambassador at St. Petersburg reports that the following are the amounts of gold and silver received from the refineries and shops of the Altai, and from individuals: 1,107,715.18 ounces of pure gold, valued at 41,163,028.58 rubles, and 149,388.85 ounces of pure silver, valued at 238,830.95 rubles. These values in United States money are for gold $21,198,960, representing 1,025,500 fine ounces, and for silver $122,998, representing 200,094 fine ounces.

An additional amount of $1,000,000 is added to the gold product for exportation of gold contained in ores.

RUSSIAN GOLD PRODUCTION AND CONCESSIONS IN THE ALTAI.

[From the Economist, London, Feb. 8, 1913.]

A correspondent reports from Ekaterinburg that: "The centenary of the right of Russian subjects to carry on the industry of gold mining in the Ural Mountains has just occurred, for until 1812 all rights were reserved to the Imperial Government. Although the deposits of gold were known to be enormous, the mining industry made little progress until the introduction of private enterprise and its application to alluvial workings. The annual production, which had been about £2,000 before 1812, rose to £42,000 in the years 1816–1820. In the next four years £315,000 was the average figure, which reached £2,313,000 between 1848 and 1855. In the year 1911, £6,160,000 was extracted."

* * * * * * *

SERVIA.

The American minister at Bucharest reports that the product of gold and silver from mines of the country during 1911 was as follows: Gold, 13,427 ounces, valued at $251,139, representing 12,149 fine ounces, and silver 28,807 ounces, valued at $13,031, representing 24,132 fine ounces. The value for the silver for 1912 is $14,834.

SPAIN.

The American legation at Madrid reports that the silver produced from mines of the country during the calendar year 1912 was 5,259,866 fine ounces, valued at 16,410,982 pesetas (at 3.12 pesetas per ounce), equivalent to $3,167,320, representing 5,152,626 fine ounces. There is no production of gold at the present time.

SWEDEN.

The American legation at Stockholm reports that the gold and silver produced from mines of the country during 1912 was as follows: 30.559 kilograms of fine gold, valued at 75,910 kroner, and 961.723 kilograms of fine silver, valued at 73,861 kroner. These values in United States money are equivalent for the gold to $20,344, representing 984 fine ounces, and for the silver, $19,795, representing 32,202 fine ounces.

TURKEY.

The American consul general at Constantinople reported the gold product of Turkey for 1909 at $473, and the silver product at $927,664. The gold value represents 23 fine ounces and the silver 1,509,133 fine ounces. As no report has been received since 1909, the figures for that year are repeated for 1912.

Production of precious metals in Turkey, 1906–1910, inclusive.

[From The French Mint Report for 1912.]

Year.	Gold.		Year.	Silver.

ASIA.

BRITISH INDIA.

The American vice counsul general in charge at Calcutta reports that the gold and silver produced from mines of the country during 1912 was as follows: Gold, 590,555 ounces fine, valued at 34,077,095 rupees or £2,271,806, equivalent in United States money to $11,055,744, representing 534,822 fine ounces. The silver product (all from lead ores) was 93,476 ounces, valued at 177,430 rupees or £11,829, equivalent to $57,566, representing 93,649 fine ounces.

CHINA.

As China publishes no statistics of her production of gold and silver recourse is had to the figures of the imports of gold bullion from China by other countries. The ambassador at Berlin reports that

the gold imports of bullion from China in 1912 was 2,720 kilograms fine, equivalent to 87,448 ounces of the value of $1,807,711.

The thirteenth financial and economic annual of Japan states that the value of gold bullion imported from China by Japan during 1912 was 282,389 yen, equivalent to $140,630, representing 6,803 fine ounces.

The under secretary to the Government of India reports that the gold bullion imported from China by India in 1912 was valued at 296,910 rupees, equivalent to $96,328, representing 4,660 fine ounces.

The annual statement of the trade of the United Kingdom gives Great Britain's imports of gold bullion from China during 1912 as 2,750,866 ounces, valued at £331,700, equivalent to $1,614,218, representing 78,088 fine ounces.

The following table is compiled from the above amounts:

Countries importing gold.	Fine ounces.	Value.
Germany	87,448	$1,807,711
Japan	6,803	140,630
British India	4,660	96,328
Great Britain	78,088	1,614,218
Total	176,999	3,658,887

MINING IN KWANGSI (SOUTH CHINA).

[Consul General George E. Anderson in Daily Consular and Trade Reports, Dec. 31, 1913.]

The commissioner of customs at Wuchow reports:

The silver mines in Kweihsien, in which so much money has been lost by Chinese capitalists in the last two decades, have been taken over by a new Chinese syndicate with a working capital of $100,000 local currency.

INDO CHINA.

The Statistique de L'Industria Minerale for 1913 states that the production of gold for 1911 was 112 kilograms, equivalent to 3,600 fine ounces of the value of $74,419. The figures are repeated for 1912.

JAPAN.

The American ambassador at Tokyo states that the gold product of Japan for 1912 was 1,378,190 momme, valued at 6,688,360 yen, and the silver product, 39,709,280 momme, valued at 5,956,390 yen. The value of the gold is equivalent to $3,330,803, representing 161,128 ounces fine, and the silver product is equivalent to $2,966,282, representing 4,825,576 ounces fine.

The product of Formosa for 1912 was gold, 443,855 momme,[1] valued at 2,194,047 yen, and gold ore, 3,365,773 "kwan," valued at 87,510 yen; these values are equivalent to $1,136,215, representing 54,964 ounces fine. The silver product of Formosa was 896,802 momme, valued at 132,416 yen, equivalent to $65,943, representing

[1] 1 momme is equal to 3.75 grams, and 1 kwan is equal to 3.75 kilograms.

107,276 ounces fine. (Definite figures for the calendar year 1912 are not available, therefore approximate figures are given as above by competent authorities.)

The totals are, for gold, 216,092 fine ounces, valued at $4,467,018, and for silver, 4,932,852 fine ounces, at a commercial value of $3,032,225.

Corrected figures taken from the thirteenth financial and economic annual of Japan for both Japan and Formosa for the years 1910 and 1911 are as follows: 1910, gold, $3,903,649, representing 188,839 ounces fine; silver, $2,474,071, representing 4,581,613 ounces fine; 1911, gold, $4,118,632, representing 199,239 ounces fine, and silver, $2,407,907, representing 4,459,087 ounces fine.

Chosen (Korea).

The American consul general at Seoul, Chosen, reports that gold and silver produced from mines of the country during the year 1912 was as follows:

1912.	Gold.		Silver.	
	Momme and kwan.[1]	Value.	Momme and kwan.[1]	Value.
Domestic production:				
From deep mines (gold ore)—				
Momme	974,872	$2,302,223	38,407	$2,677
Kwan	708,020	213,728	.....	.....
From placer mining	167,087	333,899	.....	.....
From dry or siliceous ores	1,393	2,710	58,846	4,837
Total	.....	2,852,560	.....	7,514

[1] 1 momme is equal to 2.4113045 pennyweights (troy); 1 kwan is equal to 10.0471021 pounds (troy).

These values represent for the gold 137,993 fine ounces and for the silver 12,224 fine ounces.

Siam.

In the absence of any information regarding the gold product for Siam for 1912, the figures for 1910 are repeated for 1912, viz, 85 kilograms, valued at 170,100 ticals, representing 2,733 ounces, valued at $56,496. No silver is produced in the country.

East Indies.

BRITISH EAST INDIES.

The report of the Department of Mines of Western Australia, 1912, gives the product of gold in the territory of Papua during 1912 at 15,233 ounces, fine, valued at £64,705, which is equivalent to $314,887.

BRITISH NORTH BORNEO.

No official information has been received giving the gold product of British North Borneo since 1907, when the product was estimated to have been 41,751 fine ounces, valued at $863,070, which figure is repeated as the product for 1912.

FEDERATED MALAY STATES.

The American vice consul general in charge at Singapore reports that the gold production of the Federated Malay States for 1911 was valued at £35,760, equivalent to $174,026, representing 8,418 fine ounces. These figures are repeated for 1912.

The total product of the British East Indies, viz, Papua, British North Borneo, and Federated Malay States, is 65,402 fine ounces, of the value of $1,351,983.

DUTCH EAST INDIES.

As there has been no report received by this bureau relative to the Netherlands' Indies during 1912, the gold figures for 1910, viz, 163,852 fine ounces, valued at $3,387,131, and the silver figures for 1909, viz, 465,980 fine ounces, of the commercial value of $286,438, are repeated for 1912.

AUSTRALASIA.

The report of the Department of Mines, 1913, Western Australia, gives the gold product of the Commonwealth of Australia for 1912, and the forty-third annual report of the deputy master and comptroller of the mint, London, 1912, gives the silver product as follows:

States.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
Western Australia	1,282,658	$26,514,894	150,065	$92,245
Victoria	480,131	9,925,189	25,188	15,483
Queensland	347,946	7,192,682	269,181	165,465
New South Wales	165,295	3,416,951	13,514,249	8,307,209
Tasmania	37,973	784,971	.....	.....
South Australia	6,592	136,269	.....	.....
Northern Territory	5,337	110,326	.....	.....
New Zealand	310,962	6,428,155	779,261	479,012
Total	2,636,894	54,509,437	14,737,944	9,059,414

AFRICA.

The value of the gold product of Africa for 1912 was $211,850,665 representing 10,248,276 fine ounces, and the commercial value of the silver product, $749,686, representing 1,217,554 fine ounces.

[1] Includes Madagascar, Algeria, and the French Sudan. For 1903 and 1904, Madagascar only. For 1905, figures for Madagascar and Egypt. For 1906 and 1907, Madagascar and Egypt for 1905 repeated.

[2] Includes Mozambique, Cape Colony, and Natal for all years except 1901, which does not include product of Mozambique or Natal. For 1903, includes Rhodesia, Cape Colony, and Natal. For 1904 and 1905, Rhodesia, Cape Colony, and Mozambique. For 1906 and 1907, Rhodesia, Cape Colony, Mozambique, Natal, and Bechuanaland.

[3] Previous to 1898 Rhodesia and Mozambique together produced 289 kilograms, fine, included in the Transvaal returns.

[4] Previous to 1897 the only figures obtainable were those for 1892—Madagascar only.

[5] Includes German East Africa for 1910, 1911, and 1912.

[6] Includes "Cape," "Orange Free State," and "Natal," constituting the "Union of South Africa."

Cape Colony.

The American consul at Johannesburg reports that the gold product of the Province of Cape was 1.188 kilograms, valued at £162, equivalent to $788, representing 38 ounces, fine.

Natal.

The American consul at Johannesburg reports that the gold and silver product of Natal for 1912 was 38.632 kilograms of gold valued at £5,276, equivalent to $25,675, representing 1,242 ounces, fine, and 5.333 kilograms of silver valued at £19, equivalent to $92, representing 171 ounces, fine.

Transvaal.

The American consul at Johannesburg reports that the gold and silver product of the Transvaal for 1912 was 283,275.685 kilograms, valued at £38,686,250, equivalent to $188,266,636, representing 9,107,400 ounces, fine. The silver contained in the gold bullion was valued at £124,355, equivalent to $605,173, representing 984,501 ounces, fine.

Union of South Africa.

[From Annual Report of Mines Department for the calendar year 1912.]

The net output of gold from all sources was:

Province.	1911		1912	
	Fine ounces.	Value.	Fine ounces.	Value.
For the Transvaal	8,249,461.418	£35,041,485	9,107,511.562	£38,686,250
Cape	73.052	310	38.188	162
Natal	1,705.880	7,246	1,242.061	5,276
Total	8,251,240.350	35,049,041	9,108,791.811	38,691,688

This represents 39 per cent of the world's production for 1912, estimated at £98,000,000, as compared with 37 per cent for 1911.

The total production of gold from the Union of South Africa since 1868, when gold was first discovered, amounts to approximately £363,793,910 up to the end of 1912, which was practically all produced in the Transvaal.

Monthly figures of the gold output are as follows for the Witwatersrand and the Transvaal for 1912:

Month.	Witwatersrand.		Transvaal.	
	Fine ounces.	Value.	Fine ounces.	Value.
January	698,210.848	£2,965,812	726,667.428	£3,086,687
February[1]	735,230.300	3,123,061	767,028.849	3,258,132
March	729,492.028	3,098,686	761,211.716	3,233,422
April	706,688.898	3,001,824	739,684.570	3,141,982
May	747,193.756	3,173,878	779,260.730	3,310,088
June	723,216.631	3,072,029	754,680.661	3,205,678
July	735,945.738	3,126,098	766,380.747	3,255,377
August	732,564.796	3,111,738	764,621.648	3,247,905
September	718,190.072	3,050,679	749,729.944	3,184,651
October	738,247.622	3,135,876	769,570.401	3,268,927
November	728,562.694	3,094,738	758,856.503	3,223,418
December	743,787.266	3,159,407	775,782.433	3,295,314
Total	8,737,330.649	37,113,826	9,113,475.630	38,711,581
Net output[2]	8,731,969.777	37,091,050	9,107,511.562	38,686,250
Increase on 1911	821,935.796	3,491,361	858,050.144	3,644,765

[1] Includes all reserve gold not hitherto declared by companies. [2] After adjustment of balances.

TONNAGE MILLED.

The total tonnages milled by Transvaal mining concerns were:

Mining district.	1911		1912	
	Mines.	Reef diggers.	Mines.	Reef diggers.
	Tons.	*Tons.*	*Tons.*	*Tons.*
Witwatersrand	23,991,284	2,828	25,657,235	6,115
Heidelberg	197,398	.....	225,209	540

Pietersburg	4,854	3,243	18,302	3,124
Total	24,885,551	33,097	26,581,163	39,914

"TWENTY YEARS AFTER"—A RECORD OF WITWATERSRAND MINING.

[From The Mining World and Engineering Record, London, March 29, 1913.]

The extraordinary progress made by the mining industry of the Transvaal is strikingly illustrated by a comparison of the annual reports of the Transvaal Chamber of Mines for 1892 and 1912. Gold production actually commenced on the Witwatersrand in 1887, but the records for the first few years were imperfect owing to the fact that a number of companies and individuals during that period were working and producing gold of which no returns were made. The estimated value of the output of the Witwatersrand for the first five years, however, was about 6,500,000 sterling, or not much more than two months' production at the present rate. By the beginning of 1892 the industry had got well into its stride, the number of stamps at work having gradually increased to about 2,035. The stamps, however, were of a much lighter build than those generally in use to-day—about 750 pounds weight. The year 1890 saw the introduction of the cyanide process in this district. Prior to that the tailings were considered as worthless, there being no process that could profitably treat them. Some companies, indeed, were so anxious to get rid of them that where the nature of the ground permitted they were allowed to flow away. In March, 1891, the Robinson recovered its first gold from tailings and concentrates, and in the following year the cyanide output on the Rand reached a grand total of 211,865 ounces. The growth of the industry generally in the last 20 years may be best shown by tabulating some of the results for 1892 and 1912 as follows:

Year.	Stamps working.	Tube mills working.	Tonnage crushed.	Gold won.
1892	2,035	Nil.	1,921,260	£4,297,610
1912	9,440	277	25,486,361	37,182,795

Last year's production was a record one for the field, even allowing for the fact that it included £367,991 from abolished gold reserves, making the aggregate yield from the commencement rather over 347,000,000 sterling. It is not, however, only the increased quantity of gold won that should form a basis for congratulation; a more important question from the investor's point of view is whether the increased quantity of gold won has returned a corresponding increase in profit. To the world at large the mere outturn of gold is a source of wealth, but to the shareholder in gold-mining enterprises this law does not always apply. Working costs have certainly shown a big reduction during the last 20 years—from about 30s. per ton to 18s.—the principal factor in this connection, of course, being the increased scale of operations, but it should also be remembered that the grade of ore now worked is considerably lower than it was formerly. The average recovery, for instance, in 1892 was 12 pennyweight 13 grains of gold per ton of ore crushed, whereas last year it was less than 7 pennyweight. On the whole the rate of profit earning has been well

maintained, but the ratio between yield and dividend has varied considerably from time to time. Since the commencement, approximately 25 per cent of the gold won from the mines has found its way into the pockets of shareholders in the shape of dividends. In other words, the total sum paid in dividends to date amounts to £91,455,373, while the gold yield, including that from the "outside districts," amounts to £363,835,619. We append a table showing the gold yield and the amount distributed in dividends for each year:

Year.	Dividend.	Gold yield.	Year.	Dividend.	Gold yield.
1887	£12,976	£169,401	1901	£422,413	£[1] 1,096,651
1888	127,352	967,416	1902	2,127,726	[1] 7,301,501
1889	461,644	1,490,568	1903	3,368,837	12,628,657
1890	299,557	1,869,645	1904	3,938,802	16,028,883
1891	355,600	2,924,305	1905	4,859,717	20,854,440
1892	974,041	4,541,071	1906	5,741,761	24,616,704
1893	1,042,539	5,480,498	1907	7,098,212	27,410,210

[1] War period.

In his address at the annual meeting of the Transvaal Chamber of Mines on January 26, 1893, Mr. Lionel Phillips, the president, referring to the "mineral resources of this extraordinary country," said:

> It is highly probable that the maximum output from the Witwatersrand will be reached during the present century.

How extremely meager was his conception of the possibilities of the country, however, is evidenced by the fact that since the commencement of the present century the annual production of gold has more than doubled. His successor in the presidential chair (Mr. M. G. Elkan) the other day referred with satisfaction to the numerous instances shown recently of very excellent reef values disclosed at the present deepest points of working in several mines all along the Rand, and instanced the Goduld Proprietary mine, which struck a reef at a depth of 1,925 feet, of the value of 12 pennyweight over 48 inches, as well as reefs struck by the New Modderfontein gold mines at a depth of 2,158 feet, of the value of 13 pennyweight over 48 inches; by the Modderfontein deep levels at 3,100 feet, of the value of 10 pennyweight over 46 inches; by the Cinderella Consolidated gold at 4,440 feet, of the value of 9 pennyweight over 42 inches, by the City Deep at 3,286 feet of the value of 14 pennyweight over 28 inches; by the Village Deep at 4,190 feet, of the value of 10 pennyweight over 36 inches; by the Crown mines, which at 2,660 feet exposed the main reef and a leader of abnormal width and value, the leader giving 11 pennyweight over 132 inches; by the Consolidated main reef at 2,365 feet, assaying 17½ pennyweight over 48 inches; and by the Princess Estate and Gold at 2,758 feet showing 9 pennyweight over 25 inches. "Such values as these," he said, "allowed of optimism with regard to the future of the gold fields."

THE TRANSVAAL GOLD OUTPUT.

[Consul Edwin N. Gunsaulus, Johannesburg, in Daily Consular and Trade Reports.]

* * * * * * *

On the Witwatersrand there were mined 29,163,803 tons and milled 25,486,361 tons, 12.6 per cent being rejected as waste rock. There were at work throughout the year an average of 9,449 stamps and 262 tube mills. The total output was 8,753,568 ounces, valued at $180,950,070, being at the rate of 6.8 pennyweights, valued at $7.10 per ton milled. The total working profit was $61,697,950, or $2.42 per ton milled.

The outlying districts had a total production valued at $7,663,595 and a working profit of $2,058,145.

COMPARATIVE DATA—DIVIDENDS.

Figures for the whole Transvaal in 1911 and 1912 compare as follows:

Classification.	1911	1912
Ore milled.....tons..	24,456,821	26,071,841
Stamps at work.....number..	10,020	10,027
Stamp duty per 24 hours.....tons..	7.76	8.29
Tube mills at work.....number..	223	270
Value of output.....	$170,286,718	$188,613,665
Value per ton.....	$6.96	$7.23
Working costs per ton.....	$4.40	$4.56
Profit per ton.....	$2.33	$2.45
Total profit.....	$57,063,946	$63,756,095

EGYPT.

The American consul general at Cairo reports that the gold and silver produced from mines of the country during 1912 was as follows: Gold, 4,965.735 fine ounces, valued at 21,073.39 Egyptian pounds; silver, 1,083.70 fine ounces, valued at 137.15 Egyptian pounds.

The equivalents in United States money are for the gold $104,166 representing 5,039 fine ounces and for the silver $678 representing 1,103 fine ounces.

MINERAL WEALTH OF EGYPT.

M. Polie has published some interesting information respecting the minerals of Egypt in the Bulletin de la Société d'Encouragement. Copper and gold were mined in the time of the Pharoahs, and explorations are being made in the deposits anciently exploited. The mining companies created since 1905 appear to have progressed since that epoch. Copper, which occurs in the form of silicates and carbonates, was worked extensively, and the deposits known were almost exhausted by the ancient Egyptians. The principal gold districts are to the south of Assouan, where the Nile Valley Co. is much embarrassed with transport difficulties. The quartz contains 157 to 190 grams (gram = 0.03527 of an avoirdupois ounce or 0.03215 of a (troy ounce) per ton. At Barramiah mine, in the Arabian desert, the ores yield generally from 60 to 90 grams, and the richer portions from 190

to 345; there is a 6-head stamp mill. The lack of water, the difficulties of communication, and lack of labor are factors which have a tendency to impede the development of mining in Egypt.

* * * * * * *

Liberia.

A report from the American legation at Monrovia states that the gold produced from mines of the country during the calendar year 1912 was 211 grams, valued at £27, equivalent to $131, which represents 6 ounces, fine.

Madagascar.

The American ambassador at Paris reports that the gold product of Madagascar for 1911 was 2,850 kilograms, valued at 9,816,000 francs, equivalent to $1,894,488, representing 91,646 ounces, fine.

The American consul at Tamatave reports the gold production for 1912 as 68,158.40 ounces, valued at $1,309,047, representing 63,325 ounces, fine.

Mozambique.

The Annual Statement of the Trade of the United Kingdom gives the value and quantity of the imports of gold from Portuguese East Africa in gold ores £6,265 and in bullion 41,337 ounces; assuming that the ounces are of British standard fineness they are equivalent to 37,892 fine ounces, valued at $783,297, which, added to the value of the gold ore ($30,485) gives the total product as $813,785, representing 39,367 ounces, fine.

Boma, Kongo.

The American consul general at Boma, Kongo, reports that the gold and silver produced from mines of the colony during the calendar year 1912 was as follows: Gold, 899.360 kilograms, valued at $596,-563, representing 28,859 fine ounces; silver, 112.800 kilograms, valued at $2,220.66, repsesenting 3,612 fine ounces.

German East Africa.

The American Embassy at Berlin reports that the production of gold and silver of the imperial crown mines in German East Africa was, for 1910, 347 kilograms of fine gold, valued at 943,645 marks, and 62 kilograms of fine silver. The product for 1911 was 316 kilograms, fine, valued at 866,188 marks, and for silver 59 kilograms.

The value of the gold for 1910 was $230,616, representing 11,160 ounces, fine, and for the silver $1,076, representing 1,993 ounces, fine. The value of the 1911 product was, gold $210,014, representing 10,160 ounces, and silver 1,897 ounces, valued at $1,024.

The figures for 1911 are repeated for 1912.

A gold mining enterprise in the Maunsa district of German East Africa had, from April 1, 1911, to March 31, 1912, a gold and unimportant silver product of a total value of about 80,000 marks.

West Africa.

The Report of the West African Chamber of Mines states that the product of gold in West Africa for 1912 was valued at £1,497,179, equivalent to $7,286,022, representing 352,461 ounces, fine.

GOLD PRODUCTION.

[From the Mining World and Engineering Record, London.]

In spite of the fact that the "Jungle" is suffering—in our judgment undeservedly—from market neglect, it is satisfactory to note that the gold production of the Colony continues to show expansion. The value of the output last year was just under a million and a half sterling, or about 40 per cent more than that for the previous year, and 90 per cent in excess of that for 1910. The following table is instructive as showing the progress of gold production from 1880 to 1912, inclusive:

Year.	Weight.	Value.	Year.	Weight.	Value.
	Ounces.			*Ounces.*	
1880	9,129	£32,865	1897	23,554	£84,797
1881	12,567	45,240	1898	17,732	63,837
1882	17,097	61,552	1899	14,249	51,299
1883	14,565	52,435	1900	10,557	38,006
1884	18,385	66,188	1901	6,162	22,186
1885	24,994	89,981	1902	26,911	96,880
1886	20,799	74,878	1903	70,775	254,790
1887	22,548	81,168	1904	93,548	345,608
1888	24,030	86,510	1905	168,457	657,330
1889	28,666	103,200	1906	225,959	877,568
1890	25,460	91,657	1907	293,218	1,154,885
1891	24,475	88,112	1908	297,977	1,182,680
1892	27,446	98,805	1909	235,972	951,822
1893	21,972	79,099	1910	185,493	755,985
1894	21,332	76,795	1911	261,784	1,069,442
1895	25,415	91,497	1912	362,940	1,497,179

SUDAN GOLD FIELD—AN EXCELLENT REPORT.

[From The Mining World and Engineering Record, London, Mar. 15, 1913.]

In a valuable report made by Mr. Arthur Llewellyn, the well-known mining engineer, dated July 31, 1903, the following passage occurs:

> Once and for all the question has been settled as to the real auriferousness of these Sudan fields. The ancient mines have been found, many of them have been reopened, and samples have been taken from the reefs. Some of the most easily accessible of the mines have been selected for deeper trial and are now in active work. There remains no doubt that there was a very extensive gold-mining industry here in the past, and it is equally certain that there remains a huge gold field here to-day, for the workings of the ancients, extensive as they certainly are, can only be considered as the merest scratchings on the outcrop of the reefs. Whether or not these reefs can be profitably worked under modern conditions is a problem which can only be solved by practical experiment.

The Sudan Gold Field (Ltd.) was registered in December, 1908 (being a reconstruction of a company formed about four and one-half years previously), and during the four years of its existence it has extracted from the Om Nabardi mine 56,040 tons of quartz, from which 31,402 ounces of gold, of the value of £109,046, have been recovered. The returns for each year have been as follows:

Year.	Tons crushed.	Gold won.	Value.
		Ounces.	
1909	11,846	5,679	£20,466
1910	14,662	6,967	24,843
1911	14,707	7,973	28,268
1912	14,825	10,783	35,469
Total	56,040	31,402	109,046

French West Africa.

The Statistique de L'Industrie Minerale for 1913 states that the product of gold of French West Africa for 1911 was 75 kilograms, valued at 180,000 francs, equivalent to $34,740, representing 1,680 fine ounces. These figures are repeated for 1912.

Algeria.

The American ambassador to France reports that Algeria produced 2,400 kilograms of silver, valued at 218,400 francs, equivalent to $42,151, representing 68,571 fine ounces.

Bechuanaland.

A report from the American Embassy at London states that the product of gold and silver of the Bechuanaland Protectorate in 1911 was, gold 5,475 ounces, and silver 631 ounces, the total value of which was £22,242, equivalent to $108,241. The weight of the silver, if pure, would be valued at $330, leaving $107,911 for the value of the gold, which represents 5,220 fine ounces.

The product for 1912 was, gold 1,352 ounces, and silver 156 ounces, the total value of which was £5,709, equivalent to $27,783. Assuming the silver to be fine, the value would be $96, leaving $27,687 for the value of the gold, representing 1,339 fine ounces.

Rhodesia.

The Eighteenth Annual Report of the Rhodesian Chamber of Mines gives the gold product at 642,807 fine ounces, valued at £2,707,369, equivalent to $13,175,411, representing 637,360 fine ounces, and the silver product at 176,532 ounces, valued at £20,010, representing $97,378, or 158,416 fine ounces.

The following summary shows the tonnage dealt with and the source of the gold production of Rhodesia for the two years:

Derivation.	1911		1912	
	Tons treated.	Fine ounces.	Tons treated.	Fine ounces.
Milling	1,603,478	496,457	1,537,952	502,048
Sands	716,751	88,197	561,329	81,482
Slimes	127,085	21,775	161,352	41,116
Concentrates	5,738	19,881	5,792	16,943
Other sources	.....	2,211	.....	1,218
Total	.....	628,521	.....	642,807

NEW MINES NOT FORTHCOMING.

[From The London Mining World and Engineering Journal.]

Although generally speaking, progress is being achieved by most of the established gold mines of the world, the fact is noteworthy that comparatively few new mines are forthcoming to take the place of those that have reached or are approaching their zenith. The far eastern section of the Witwatersrand is certainly supplying some, but in the outlying districts of the Transvaal nothing of very great importance has been discovered for a long time past. In Rhodesia several mines are developing satisfactorily, but it can not be denied that official anticipations in many instances have failed to eventuate. West Africa has been making scant progress, although there are several promising properties in the colony that might do well if given financial support to enable development work to be undertaken with vigor. Western Australia has furnished no new discoveries to speak of in recent years, and, excepting the few promising mines in the Anantapur field, the same remark applies to India. As regards Mexico, the United States, Canada, and Russia, it has also to be admitted that no new sources of gold supply have been opened up.

WORLD'S PRODUCTION OF GOLD AND SILVER.

CALENDAR YEAR 1910.

Countries.	Gold.			Silver.		
	Kilos (fine).	Ounces (fine).	Value.	Kilos (fine).	Ounces (fine).	Commercial value.

WORLD'S PRODUCTION.

The following table shows, by calendar years, the production and value of gold and silver in the world since 1860:

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates, compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1860	6,486,262	$134,083,000	29,095,428	$39,337,000

PART I.

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1912.

REPORT

OF THE

DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, January 10, 1913.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I am submitting herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1912, being the fortieth annual report of the Director of the Mint. I am also submitting for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1911.

OFFICES OF THE SERVICE.

The mints at Philadelphia, Denver, and San Francisco were in operation throughout the fiscal year. The assay office at St. Louis was discontinued at the close of the fiscal year 1911 and the equipment shipped to other offices. The assay offices at New York, Charlotte, Deadwood, Helena, Boise, Salt Lake City, Carson, New Orleans, and Seattle were open to deposits as usual.

In January, 1912, the new electrolytic refinery in the New York office was started up and has been in operation continuously since, excepting while the annual settlement was underway at the close of the fiscal year.

ELECTROLYTIC REFINERIES.

The refinery at New York is the fourth in the mint service of this country to be equipped with the electrolytic process, but in the meantime refining operations have been discontinued at the Philadelphia Mint, leaving three refineries in operation.

The electrolytic process as developed in the mint service is based on the Wohlwill patents, but the practice has been materially altered to suit the conditions. It gives good results, yielding a very high-grade bullion, ductile and favorable to the best results in coinage operations.

ASSAY OFFICE AT NEW YORK.

The old assay office building at New York, No. 32 Wall Street, was finally vacated during the last fiscal year, the entire establishment

being moved temporarily into the new building on the rear of the lot, which is planned to be devoted eventually to the melting and refining department.

This site was bought in 1822 by the Bank of the United States, which erected the building now standing upon the property. The United States assay office was established upon these premises in September, 1854, but from that date to 1873 the assay office occupied only the upper floor, the Government renting the ground floor to private parties.

The building will be torn down at an early day to make room for a new structure for which an appropriation has been made. The present quarters are very much cramped and the working force labors under serious inconvenience and discomfort.

PHILADELPHIA MINT.

The refinery in the Philadelphia Mint has been discontinued, because with a refinery in operation at New York the amount of crude bullion received at Philadelphia is insufficient for economical operations. The western bullion which formerly came to this mint now goes to the Denver Mint and bullion imported at New York is received at the New York office. So much of the Philadelphia equipment as could be advantageously used at New York was transferred.

During the year a new set of 16-inch rolls, the heaviest ever used in our mint service, were installed for handling the minor coinage. They will take an ingot 24 inches long, $4\frac{1}{2}$ inches wide, $\frac{3}{4}$ of an inch thick and produce a strip from which six bronze or five nickel planchets may be struck at once. For other changes in the equipment of this mint reference is made to the report elsewhere.

SAN FRANCISCO MINT.

Since the close of the fiscal year 1912 the superintendent of that institution, the Hon. Edward Sweeny, has died, and the Hon. Frank A. Leach, formerly superintendent of the same mint and later Director of the Mint at Washington, has been installed as his successor. The loss of Judge Sweeny was greatly deplored, but the Government is fortunate in being able to secure the services of Mr. Leach. A review of recent changes in the methods and equipment of this mint is given in the more extended account of its operations, which appears in this volume elsewhere.

NUMBER OF EMPLOYEES IN THE SERVICE.

The number of employees in the mint service continues to show diminution, being less by 36 on July 1, 1912, than on July 1, 1911. This continuous reduction is due in part to a smaller coinage, but in the main to the introduction and more efficient use of automatic machinery. The coinage of gold has been less than in previous years as a result of the act authorizing the issue of gold certificates against gold bullion.

The number of employees at each institution at the beginning and end of the fiscal year is given herewith, all officials included:

Institution.	July 1, 1911.	July 1, 1912.
Philadelphia	356	333
San Francisco	138	124
Denver	100	93
New Orleans	14	13
New York	66	89
Carson	10	8
Boise	10	10
Helena	12	8
Charlotte	4	3
Deadwood	5	5
Seattle	24	19
Salt Lake City	8	6
Total	747	711

NEW NICKEL PIECES.

During the year Mr. J. E. Fraser, of New York, was invited to submit designs for a new 5-cent nickel coin and he has prepared designs that have been accepted. The features of the piece, in addition to the inscriptions required by law, are an Indian head for the obverse and a buffalo for the reverse. The coin is distinctively characteristic of America, and in its execution promises to take high artistic rank among the coinages of the world. It seems peculiarly appropriate that the Indian and buffalo should be associated permanently in a national memorial, and there can be no better form for such memorial than a popular coin.

GOLD CERTIFICATE BARS.

At the close of the fiscal year refined gold bars, duly stamped with their weight, fineness, and value, in accordance with the provisions of the act of Congress approved March 2, 1911, providing for the issue of gold certificates against gold bullion and foreign gold coin, were held at the several mints and the assay office at New York as follows:

New York assay office	$10,094,982.26
Philadelphia Mint	6,109,745.11
Denver Mint	36,088,677.49
San Francisco Mint	56,755,513.06
Total	109,048,917.92

No certificates have been issued against deposits of foreign coin, and this feature of the act will probably be seldom used. The object in view, which was to avoid the melting of foreign coin, would be more effectively accomplished by authorizing the national banks to include foreign coin in their reserves, as foreign banks do. Any invoice of coin, even if fresh from a mint, will show some loss upon being melted, and there is always a risk that counterfeits are included. A bank may import foreign coins and dispose of them in the regular course of business without melting, by exportation, but if the Treasury receives them there is no assurance that they can be disposed of at their face value. The Treasury is not engaged in exchange operations and can not export them without inconvenience and expense.

If melted they are certain to show a loss from their face value. The only condition under which the Treasury could safely issue certificates against foreign coins would be where an agreement was made, with proper security for its performance, by which the coins would be taken off its hands at their face value.

ESTIMATES FOR FISCAL YEAR 1914.

The total estimates for the mint service for the fiscal year 1914, including all expenditures heretofore paid from earnings, are $1,222,270, which compares with $1,228,920, appropriated for 1913, a reduction of $6,650.

Prior to the present year all expenditures incidental to the maintenance and operation of the refineries connected with the service were made directly from current earnings. The law contemplates that this branch of the service shall be self-supporting, and to this end charges are imposed upon all bullion which requires treatment to fit it for coinage. These earnings in the past have been paid into the Treasury to the credit of the parting and refining fund and were all available under a continuing appropriation for the payment of the costs of refining operations. Beginning July 1, 1912, this practice was changed. The estimates for the mint service for the fiscal year 1913 included the sums required for operating the refineries. The expenses connected with these operations are now being paid from the regular appropriations, and the earnings are turned into the general fund of the Treasury as miscellaneous receipts. The earnings from all refinery sources during the last fiscal year, including the proceeds of sales of by-products and the surplus bullion recovered, amounted to $359,315.29, while the expenditures against these earnings were $237,912.99.

ANNUAL APPROPRIATIONS FOR 1912.

The amounts appropriated for conducting the mint service during the fiscal year 1912 totaled $1,178,670, to which should be added the reimbursements for work done for the Philippines and San Salvador Governments and for United States Government institutions, amounting to $51,441.11; also unexpended balances of permanent appropriations amounting to $20,483.55 and reimbursements thereto amounting to $2,556.30; this gives the total amount available for use during the fiscal year 1912, $1,253,150.96.

The expenditures from above funds (including the reimbursements noted) total $1,022,433.07, to which a few minor unsettled bills may be added.

The unexpended balance totals $230,717.89, of which $13,353.35 (permanent appropriation balances) continues to be available until used, and the remainder, $217,364.54, reverts to the surplus fund of the Treasury.

These figures do not include expenditures from the earnings of the refineries.

Details, by institutions, are shown in the following tabulated statement:

Appropriations, reimbursements, expenditures, and balances, all offices, fiscal year 1912.

DEPOSITS OF GOLD BULLION.

The value of all gold bullion contained in original deposits at the mints and assay offices during the fiscal year 1912 was $151,929,881. The redeposits during the year, consisting of bullion transferred from one office to another and bars bearing the stamp of one of the mints or assay offices, amounted to $28,817,726. The value of the gold bullion and uncurrent domestic and foreign coin received, including redeposits, amounted to $180,747,607, which was the total of gold receipts at all offices.

Statements which show the classification of deposits, the source of domestic bullion by States and Territories, and the receipts at the several offices of the service appear in tabular form in this volume elsewhere.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 1,124,140 standard ounces, of the value of $20,914,227, and foreign gold coin containing 115,844 standard ounces, of the value of $2,155,233, were deposited, and consisted of bullion and coin produced in the following-named countries:

Country.	Crude bullion.		Refined bullion.		Coin.	
	Standard ounces.	Value.	Standard ounces.	Value.	Standard ounces.	Value.
British Columbia	48,485	$902,047	9,269	$172,438

DEPOSITS AND PURCHASES OF SILVER.

The deposits of silver received at the mints and assay offices during the fiscal year ended June 30, 1912, for return to depositors, in fine or unparted bars, with the weight and fineness stamped thereon, aggregated 2,000,291.55 fine ounces. The United States assay office at New York received the greater part of these deposits.

The government of the Philippine Islands deposited at the United States mint in San Francisco silver coins issued under the act of March 2, 1903, containing 227,303 fine ounces, for recoinage into coins of reduced weight and fineness as authorized by the act of June 23, 1906.

The purchases and deposits of silver bullion at the mints and assay offices of the United States during the fiscal year 1912 were as follows:

Items.	Fine ounces.	Cost.
Commercial bars purchased	3,462,471.76	$2,021,856.59
Unrefined deposits, partings, charges, and fractions	1,328,866.37	727,671.56
Mutilated and uncurrent coins	1,982.54	1,087.61
Assay coins and surplus bullion	10,347.65	6,288.97
For return of fine bars	2,000,291.55	1,092,855.16
Philippine coins transferred for recoinage	227,303.00	222,866.28
Total	7,031,262.87	4,072,626.17

DEPOSITS OF FOREIGN SILVER BULLION AND COIN.

Foreign silver bullion containing 1,063,592 standard ounces and foreign silver coin containing 8,816 standard ounces were received from various countries as follows:

PURCHASE OF MINOR COINAGE METAL.

There was purchased during the year 17,143,339.05 ounces, equivalent to 1,775,600 pounds avoirdupois, of minor coinage metal, at a cost of $189,680.46, and delivered at the Philadelphia and Denver Mints, as follows:

Metal.	Philadelphia.		Denver.		Total.	
	Ounces.	Cost.	Ounces.	Cost.	Ounces.	Cost.
Copper	13,132,798.44	$114,055.47	1,458,333.33	$13,450.00	14,591,131.77	$127,505.47
Tin	278,009.37	8,279.44	8,939.58	275.85	286,948.95	8,555.29
Zinc	335,737.50	1,366.03	29,181.25	130.07	364,918.75	1,496.10
Nickel	1,459,339.58	40,027.60	441,000.00	12,096.00	1,900,339.58	52,123.60
Total	15,205,884.89	163,728.54	1,937,454.16	25,951.92	17,143,339.05	189,680.46

In addition to the above there were purchased 8,000 pounds of prepared nickel blanks, at a cost of $2,708; and 40,000 pounds of bronze blanks, at a cost of $9,450, for delivery at the mint at Philadelphia.

DISTRIBUTION OF MINOR COINS.

The amount of minor coins distributed was $2,471,215.35, $307,875.20 in excess of the actual coinage, which excess was drawn from the accumulated stock. The expense of distribution was $29,821.72 for bags, twine, seals, and kegs and for freight between mints and subtreasuries.

Denomination.	From Philadelphia.	From San Francisco.	From Denver.	Total.
5-cent, nickel	$1,569,154.70	.....	$11,020.65	$1,580,175.35

PHILIPPINE COINAGE.

The following coinage was executed during the fiscal year 1912 at the United States mint at San Francisco for the Philippine Government:

Denomination.	Pieces.	Fine ounces consumed.
Silver:		
Pesos	295,000.00	151,748.00
20 centavos	1,255,000.00	121,053.22
10 centavos	1,000,505.00	48,257.82
Total, silver	2,550,505.00	321,059.04
Bronze:		
1 centavos	5,703,000.00	.....

The total silver coinage to June 30, 1912, from coins received from Philippine Islands for recoinage and from bullion purchased for such coinage was as follows:

Denomination.	Coined from new bullion, acts of Mar. 2, 1903, and June 23, 1906.		Coined from Philippine coin received for recoinage, act of June 23, 1906.		Total.	
	Pieces.	Fine ounces.	Pieces.	Fine ounces.	Pieces.	Fine ounces.
Pesos	93,445	48,068.11	42,530,059	21,929,272.78	42,623,504	21,977,340.89
50 centavos	3,342,126	805,870.13	2,136,000	534,382.25	5,478,126	1,340,252.38
20 centavos	3,666,152	353,600.36	3,270,759	339,511.24	6,936,911	693,111.60
10 centavos	6,077,392	293,082.21	4,055,000	213,607.96	10,132,392	506,690.17
Total	13,179,115	1,500,620.81	51,991,818	[1]23,016,774.23	65,170,933	24,517,395.04

[1] Included in this amount is 12,299.92 fine ounces of coins reserved for assay. (The balance of silver now on hand to the credit of the Philippine Government is 423.19 ounces, fine.)

Of the coins manufactured for the Philippine Government under the act of March 2, 1903, there were remaining in the Philippine Islands June 30, 1912, the following:

Denomination.	Pieces.	Value in pesos
Pesos	2,190,385	2,190,385.00
50 centavos	546,118	273,059.00
20 centavos	2,073,768	414,753.60
10 centavos	3,882,557	388,255.70
Total	8,692,828	3,266,453.30

WORK OF THE GOVERNMENT REFINERIES.

Bullion was operated upon by the refineries connected with the coinage mints and assay office at New York during the fiscal year 1912, as shown by the following tables:

UNITED STATES MINT AT PHILADELPHIA.

This mint was in operation throughout the year, chiefly upon subsidiary and minor coins. The details of the deposits and ordinary coinage operations are to be found in general tables elsewhere in this report.

PROOF COINS AND MEDALS.

The following table shows the number of proof coins and medals and their nominal value, manufactured during the fiscal year:

Articles.	Pieces.	Nominal value.
Gold medals	127	$3,456.51
Silver medals	545	1,296.55
Bronze medals	8,620	2,774.03
Gold proof coins	592	4,090.00
Silver proof coins	1,995	565.25
Minor proof coins	4,390	131.70
Total	16,269	12,314.04

THE STATE OF THE NUMISMATIC COLLECTION.

Preliminary to a brief statement on the condition of the numismatic collection at the close of the fiscal year just ended it might be well to make an observation upon the more important subject of the interest now shown by the public in the objects embraced in the collection. In this country there is an improved general as well as scientific interest in that branch of archæology known as numismatics. It is not easy to describe in few words the manifestations of an advance in the knowledge and appreciation of a large and important field of information such as the study of the world's coinages has produced during the last seven centuries; yet one is readily made aware of the fact that within the last decade knowledge of the historical significance and cultural value of coins has been widely disseminated among our people, and decidedly marked is the improved taste for the medal, the artistic character of which is far more widely insisted upon than heretofore. In view of the vast and scholarly literature on the subject one is surprised at the scant attention given to numismatics in this country until he learns that the whole subject of archæology is of rather recent cultivation in America. Comparatively few of the larger universities of the country have yet been able to provide themselves with professorships of archæology, and a department so special as numismatics could hardly be expected to have secured large attention. Yet, as before stated, interest in the subject is now increasing; in some of the universities occasional courses of lectures on the Greek or Roman coinages are now offered, and, judging from the number of instances in which this department has been called upon for advice and expert assistance, the number of institutions whose small historical museums include a limited general collection of ancient and modern coins must be rather large.

During the past year the catalogue of the collection has been published and is now on sale. This is a single volume of 639 pages and embraces the entire collection of both coins and medals, and since the collection includes specimens of almost every period and of every country of the civilized world, the catalogue presents a fairly complete conspectus of the world's coinages.

Additions to the collection for the year just closed have greatly exceeded the excellent showing of the previous year. A specially good opportunity, in the sale of the large collection of Mr. G. H. Earle, jr., was presented for securing long-desired specimens and a considerable number were purchased at that sale—very many, indeed, when the small amount of the funds available for the purchase of coins is taken into consideration.

MACHINE SHOP.

In addition to the regular repairs and upkeep of the machinery and appliances, the following new work was done for this mint:

Fifteen 2,000-ounce fine gold bar molds.
Iron rack and truck for storeroom.
One surfacing machine for boiler headers.
Beds, punches, collars, and tubes for automatic weighing machines for Salvador *Un Peso* coinage.

The three automatic weighing machines of our own designs were run almost constantly since their installation last year, and the grati-

fying results obtained in speed and accuracy of weighing were such that two more of these machines were completed during this fiscal year, making a total of five in use at this mint.

The three coin presses sent here from the mint at New Orleans, La., were entirely dismantled and rebuilt. Individual motor drives replace the old belt drives and automatic hopper feeds have been added. A new method has been provided for delivery of the finished coin at the side of the press instead of underneath. These improvements have made the presses up to date in every respect.

One new outside packed Worthington boiler feed pump has been installed to take the place of one Barr pump which had cracked and was condemned.

Owing to the rush of work necessary to complete the two automatic weighing machines, work on the minor coinage plant was somewhat delayed. The two 16 by 16 inch rolling mills with motor drives have been installed, and the heavy cables for current have been carried from the main switchboard in engine room to the panel boards at the mills. These mills are the heaviest ever used in minting operations and will be capable of breaking down in a comparatively few passes an ingot 24 inches long, 4½ inches wide, ¾ inch thick, and producing a strip from which will be cut six bronze or five nickel planchets at each stroke of the cutting press.

One new rotary annealing furnace has been purchased and placed in position.

Considerable progress has been made on the heating and ventilating system.

One 100-ton shear for topping the heavy ingots has been completed and is ready for installation in melting room. Several different molds have been made in order to determine which will prove the best in pouring the large ingot.

Work is now in progress on the beds and punches for cutting presses, and also on a 6-inch lever shear for cutting the strips.

During the same period the following work was done in the shops for the mint at San Francisco, Cal.:

Equipment for whitening room, consisting of two tumbling barrels, or washing machines.
Two conical and two square copper colanders.
Three tanks and carriages for rotary annealing furnaces.
Six copper-lined trucks.
One copper and one lead-lined tub.
Two brass pots and two copper colanders for gold.
Six copper-lined clipping boxes.
One 6-foot balance with complete complement of weights.
One steel-covered table for use at scale.
Three sets of automatic coin press feeders for nickel.
Two sets of toggles for sectional collars.
Four sets of eagle sectional collars (48 stars).

During this year, by reason of the admission of two new States to the Union, it was necessary to change the design on the edge of the eagle from 46 to 48 stars, which made necessary the destruction and replacing of all tools, collars, etc., bearing the 46 stars.

For the mint at Denver 58 coin collars were made.

For the Department of Agriculture, 10 silver disks.

For the United States assay office at New York, repair parts for various machines.

CARPENTER SHOP.

Besides the general repairs and upkeep of the machinery and appliances the following work was done by the chief carpenter and his assistants during the year:

The roof on the Spring Garden Street front of the building was repaired.

Part of the old refinery was altered, repaired, and painted, so that it could be used as a workshop by the electricians.

The iron grill work, front doors, railings, fences, tree boxes, etc., were cleaned and painted.

The new storeroom was equipped with shelving, bins, tables, stationery cases, etc.

Two mahogany exhibition cases were made for the numismatic room.

Card-filing cases were made for the offices of the chief clerk, medal clerk, and coiner.

Improvements were designed and added to the counting hoppers, which greatly facilitates the bagging and handling of coin.

The counting boards were improved by a new method of inserting and fastening the brass division strips that will allow the wood to shrink or swell without splitting it or tearing out the brass strips. Three of these boards have been made for the St. Louis subtreasury.

A new safety device has been added to the coin-examining machines.

One steel-rail top table was made for the superintendent's transfer weigh room.

One table was made for a new scale in the assay department.

Patterns were made for scales, automatic weighing machines, machinery, etc.

One counting board was made for Costa Rican 5-centimo pieces coined here.

One thousand five hundred and fifty-six silver-dollar storage boxes were made.

Two hundred hardwood-bottom coin boxes were manufactured.

Shipping boxes for San Salvador coins were made.

Secret locking devices for the exhibition cases in the numismatic room were designed, made, and placed upon the cases. These locks clamp the covers on the cases, so as to make the cases as near dust-proof as possible.

One portable vise bench was made for the rolling room.

For the San Francisco Mint the following new equipment was made:

Two counting hoppers.
Eight counting boards.
Three copper-lined annealing tanks.
One lead-lined acid tank.
One copper-lined cleaning tank.
One selecting table.
One steel-rail top bench for 6-foot scale.
Six copper-lined strip cars.
Six copper-lined clipping boxes.
One mahogany case for 6-foot scale.

For the St. Louis subtreasury there were manufactured:

Six counting boards.

For the New York assay office the equipment of the refinery of this mint was repaired and put in good order, many new articles made, and the whole boxed and crated for shipment.

ASSAYING DEPARTMENT.

The operations of this department during the fiscal year 1912 were as follows:

Item.	Samples operated on.		
	Gold.	Silver.	Gold and silver.
Deposits	2,814	667	.....
Redeposits	.....	.....	120
Anode melts	44	160	.....
Fine melts	37	141	.....
Ingot melts	234	2,430	.....
Experimental melts	13	.....	.....
Bullion assay samples	.....	.....	188
Melter's assay samples	.....	.....	181
Coiner's bars	.....	.....	30
Assayer's bars	.....	.....	37
Superintendent's grain bars	.....	.....	32
Sweep samples	.....	.....	38
Certificate bars	12	.....	.....
Silver purchase bars	.....	1,738	.....
Total	3,154	5,136	626

The number of assays made was as follows:

Deposits and purchases	51,310
Ingots (gold and silver)	9,820
Special assays	3,173
Miscellaneous assays, bronze and nickel	698
Oil assays	35
Total	65,036

The average cost per assay during the year was $0.357.

In addition to the above, 488 ounces of proof gold and 340 ounces of proof silver were made.

Of the 234 melts of gold ingots made by the melter and refiner, 42 were returned for remelting. Of the 2,430 melts of silver ingots, 16 were returned for remelting and 8 were condemned.

The fineness of gold melts passed was:

3 melts at	900.2
9 melts at	900.1
57 melts at	900.0
63 melts at	899.9
44 melts at	899.8
16 melts at	899.7
192	

The fineness of silver melts passed was:

42 melts at	900
92 melts at	899¾
220 melts at	899½
233 melts at	899¼
626 melts at	899
423 melts at	898¾
555 melts at	898½
139 melts at	898¼
76 melts at	898
2,406	

About 70,000 cupels were made.

MELTING AND REFINING DEPARTMENT.

Upon the settlement of the melter and refiner's accounts, June 29, 1912, there was found an apparent gain upon the gold bullion of 710.259 standard ounces, and in the operations upon silver bullion an apparent gain of 4,437.32 standard ounces.

The melts made aggregate as follows:

Melts.	Bars.	Ingots.	Anodes.	Deposits.	Specials.	Re-melted.	Con-demned.
Gold	64	234	47	4,675	47	42	.....
Silver	262	2,431	160	368	.....	17	7
Total	326	2,665	207	5,043	47	59	7

The large number of remelts in gold was due to the lack of high refinement in gold shipped to us for coinage. It was not the product of Government electrolytic refineries, and assayed from 993.8 to 998.8. This department, likewise the coiner's department, secures much better results when using highest-grade electrolytically refined gold bars for coinage.

During the year, 260 barrels of sweeps were recovered, containing by assay 715.766 standard ounces of gold and 2,545.49 standard ounces of silver. Of this lot, 111 barrels were recovered from sweeps sent by the United States assay office at New York, which contained 362.999 standard ounces of gold and 368.56 standard ounces of silver.

This department yielded 129 barrels of sweeps, containing 273.534 standard ounces of gold and 1,927.10 standard ounces of silver, the balance representing superintendent's and coiner's material. Besides this, grains and pellets from minor coin melting operations to the extent of 23,667.67 ounces were recovered by treating in sweep mill. This latter work was carried on without conflicting with regular sweep operations.

Number, weight, and value of gold and silver bars for industrial use, including gold-certificate bars and fine silver bars transferred to New York assay office.

Metal.	Bars.	Standard ounces.	Coinage value.
Gold	5,666	686,070.773	$12,764,107.49
Silver	4,441	887,857.20	1,104,643.48
Total	10,107	1,573,927.973	13,868,750.97

The operations of the refinery were as follows:

Bullion.	Gold.	Silver.
	Standard ozs.	*Standard ozs.*
Sent to refinery 891,246.30 gross ounces containing by assay	240,636.684	622,501.47
Bullion received from refinery	241,093.795	622,859.21
Sweeps	170.458	1,067.54
Apparent gain	627.569	1,425.28

The surplus of gold and silver as shown by our refinery account is almost entirely due to the large returns from dismantling the refinery equipment and burning apparatus that would otherwise have served for years.

Silver bullion sent to the refinery upon which refining charges were collected contained by assay 242,041.91 standard ounces, and silver owned by the Government returned to the refinery for parting purposes upon which no parting charges were collected contained by assay 381,884.84 standard ounces.

Receipts and deliveries by the melter and refiner.

Items.	Gold account.	Silver account.	Minor coinage metal account.	
			Nickel.	Bronze.

This department has had before it for consideration an improved method for melting and handling the minor coin metals, so as to turn out an ingot weighing about 25 pounds. Our present system of pouring two 4-pound ingots into a double mold and then throwing this filled mold down to the next in line to open and extract the ingots is crude, though it might pass muster for the deliberate and exacting work of gold and silver ingot making. However, for quickly and effectively handling large volumes of minor coin metal a less laborious and more mechanical method impresses the careful observer as much to be desired.

This department during the past year has with comparatively little expense tried out two different types of oil furnaces on our special work. The furnaces were shipped to us and after trial returned at the expense of the factories and this Government was only at the expense of setting up, providing suitable molds, and operating. The first type tried was an oil-burning reverberatory tilting furnace. It was originally planned to run our metal down in this furnace under a heavy flux; this not being feasible, we tried it out with the flame playing directly over metal charge. The results upon bronze were better than anticipated, in that the ingots were solid and the proportion of zinc not unduly reduced. On the cupro-nickel melts, however, it was impossible to get solid ingots, the oxides of the metals preventing a uniformly sound casting. While with this furnace we poured direct into the molds, the mechanism for tilting was not perfect, which resulted in spilling by overflowing, when it was desired to exactly fill the molds.

The other furnace tried out was an oil-burning tilting crucible type, using No. 125 crucible. This furnace possesses some excellent features and much better accuracy in tilting and pouring direct was secured by its use. The great trouble, however, as found by testing it out, was due to excessive oxidation on account of the construction not permitting use of a cover on the crucible.

The problem before us now seems not to be so much a furnace one (unless it be an electric crucible furnace) as one dealing with good mechanical methods of getting molten metal into molds and in a nonlaborious way extracting the ingots from the molds.

This department sees the possibilities of quickly getting the molten metal from the crucible if this is grappled by heavy tongs, removed from the furnace, and tilted over the molds. This, while rapid, involves great risk to workmen and shortens the life of the crucible, primarily by crushing with tongs while hot and more or less soft and then again by subjecting it to cooling drafts outside of furnace. We think some better method than this will be evolved and are about to try out another plan that will get out very much more metal in eight hours than we are now doing, and less laboriously than is our present practice.

As we now see it, an electric crucible furnace would be our most satisfactory melting scheme, though we have yet to see the efficient type that will meet our requirements. This being the case, we are led to expect that our coming equipment must be of the oil-burning type, for no strides of any consequence have lately been made in the matter of melting large quantities of high-grade nonferrous metals without undue oxidation.

There is little difficulty in getting proper temperature in most any modern oil furnace, but the proper control of this high temperature so as to melt with a minimum of oxidation is of utmost importance; after this, getting the metal out quickly and with a minimum of labor into good bars should follow.

The assistant melter and refiner has invented a new form of mold, which need not be lifted in order to remove the ingot. It promises to be a very useful and labor-saving device which can be used with any furnace. A number of these molds are being prepared and a new experimental furnace is expected here in the near future. Our experiments have demonstrated that the tilting type of furnace, as now made, is unsuitable for our service, though possessing some attractive mechanical features. A further development along melting lines is necessary if good solid metal is to result.

COINING DEPARTMENT.

During the fiscal year 1912 this department received from the superintendent 1,193,100.92 standard ounces of gold for coin, which was operated upon and from which there was produced 343,338.587 standard ounces of coin of the value of $6,369,090, and delivered to the superintendent during the fiscal year prior to settlement. There was also delivered to the superintendent prior to settlement, 627,-839.958 standard ounces of gold in clippings, bars, condemned coin, and sweeps, and there were delivered in settlement 222,939.05 standard ounces in finished coin and blanks. The entire operation showed a gain or surplus of 16.796 standard ounces of the value of $312.48. A recovery of former wastage from the pipes and wells contributed this surplus.

The percentage of coin produced to the amount of metal operated upon was 28.69 per cent.

This low percentage was due to a low-grade gold which had not passed through the mint refinery and the coinage of a large amount of half eagles, and all quarter eagles without adjusting the blanks, the pieces being weighed only after coinage, and those found above or below the tolerance returned to the melting pot. The design of these two denominations will not allow any shaving or filing of the blanks. A large percentage of the gold delivered to the superintendent at settlement consisted of unfinished coin and blanks.

During the same period the coiner also received from the superintendent 9,189,533.65 standard ounces of silver for coinage, of which 9,156,325.45 standard ounces were operated upon, from which there were produced 3,903,152.33 standard ounces of coin of the value of $4,856,565.25 in subsidiary silver coin, and 410,710.29 standard ounces of silver coin for the Government of San Salvador, from which there were produced $510,992.58 in United States subsidiary value, and delivered to the superintendent during the fiscal year prior to settlement.

There were also delivered to the superintendent during the fiscal year prior to settlement 4,099,343.56 standard ounces of silver clippings, condemned coin, and sweeps, and there were delivered at settlement 775,629.05 standard ounces of ingots, unfinished half dollars, quarter dollars, dimes, and finished Costa Rica coin. Upon

the entire operation there was a wastage of 693.27 standard ounces of the value of $372.78, being 7.57 per cent of the legal allowance. The percentage of coin produced to the amount operated upon was 54.80 per cent. This includes the coined half and quarter dollars (awaiting weighing), dimes, and finished Costa Rica coin delivered in settlement.

There were also delivered to the coiner during the same period 9,944,707.25 standard ounces of nickel ingots and blanks, from which there were produced from the metal operated upon 3,727,986.76 standard ounces of 5-cent pieces of the face value $1,159,388.20, upon which there was a wastage of 6,472.19 standard ounces of the value of $75.74, being 79 per cent of the legal allowance as allowed on silver. There were also delivered to the superintendent during the fiscal year prior to settlement 4,457,208.80 standard ounces in clippings, condemned blanks, condemned coin and chips, and there were delivered at settlement 1,753,039.50 standard ounces of ingots. The percentage of coin produced to the amount of metal operated upon was 45.51 per cent. This low percentage is owing to the large percentage of condemned blanks.

There were also delivered to the coiner during the same period 13,832,172.33 standard ounces of copper-bronze ingots and blanks, from which there were produced from the metal operated upon 6,113,984.30 standard ounces of 1-cent coin of the face value of $609,981.95, upon which there was a wastage of 2,920.93 standard ounces of the value of $34.18, being 29.98 per cent of the legal allowance as allowed on silver.

There were also delivered to the superintendent during the year, prior to settlement, 3,626,284.80 standard ounces in clippings, condemned coin, and blanks, and there were delivered in settlement 4,088,982.30 standard ounces of ingots.

The percentage of coin produced to the amount of metal operated upon was 62.75.

It will be noticed from the above figures that the wastage on minor coin is much lower than in previous years. This saving is due to the new process of cleaning, supplanting the old and expensive method of acid cleaning. By the elimination of the acid process we not only save in the wastage, but in the cost of material and wear and tear of machinery.

In addition to the gold received for coinage the coiner received 682.778 standard ounces of fine gold for medals, from which 176.623 standard ounces were used in the manufacture of medals. This amount and 343.556 standard ounces in clippings were delivered to the superintendent prior to settlement and 162.720 standard ounces delivered in settlement.

The coiner also received from the superintendent during the same period 3,148.39 standard ounces of fine silver. From this amount 1,404.61 ounces were used in the manufacture of medals, and this amount with 1,531.53 ounces in clippings were delivered to the superintendent prior to settlement and 217.40 standard ounces in fine silver delivered in settlement. The slight gain in gold and silver is included in the gain and loss in the coinage of gold and silver.

The gold, silver, and minor domestic coinage for the year amounted to $12,995,025.40 in United States coin, and $510.992.58 in United

States subsidiary value of coins made for the Government of San Salvador, making a total of 14,498,172.26 standard ounces of metal consumed in the entire operation. Net wastage on this amount of metal was $170.22.

IMPROVEMENTS.

Improvements in the way of an independent minor-coin plant are well under way. The basement under the northwest terrace corner of the building has been fitted up for that purpose. The object of this separate plant is to keep the workings of the base metal isolated as much as possible from those of the precious metals. Considerable suitable machinery has already been installed. Two large 16-inch rolling mills, driven by 175-horsepower electric motors, have been placed in position. These mills will be used for rolling and finishing bronze and nickel ingots 24 inches long, 4½ inches wide, and ¾ inch thick. Two cutting presses capable of cutting six blanks or planchets, two automatic rotary gas furnaces for annealing blanks, and one strip annealing gas furnace for annealing large ingots. Two centrifugal drying machines and sufficient tumbling barrels to do the work are being added. The plant will be in operation before the end of the year.

Two automatic weighing machines have been added to the three now in use in the automatic scale room, making five in all. In weighing blanks or coin these five machines will weigh over 200,000 pieces per day. Three coining presses and one 9-inch rolling mill from the New Orleans Mint have been rebuilt and added to our present equipment.

An improvement has been made on the coining presses. Instead of delivering the coin after it is struck through a leather boot to a box or receptacle directly under the press it is delivered through a pipe to a screened box fastened on the side of press. The advantage over the old way is the money can be easily handled and is always in full view of those in charge of the presses.

Receipts and deliveries by the coiner.

ENGRAVING DEPARTMENT.

All the dies used in coining operations in all of the mints are made in the engraving department at Philadelphia. The embossed-envelope dies used by contractors supplying envelopes for the Post Office Department and Postal Savings Bank are also made here; also dies for Army and Navy and other authorized public medals. The mint is reimbursed for the actual expenditures for labor and materials on these medal accounts.

The number of dies prepared for United States coinage last year was 2,110. In addition, 265 dies were made for Philippine coinage, 78 for Costa Rica, 4 for San Salvador, 158 for Post Office Department, 11 for medals, and 30 master dies and hubs; in all, 2,056, as follows:

Denomination.	Philadelphia.	San Francisco.	Denver.	Total.
Gold:				
Double eagle	10	.....	.....	10
Eagle	10	20	.....	30

NUMBER OF EMPLOYEES.

The total number of employees in this mint at the close of the fiscal year was 333, distributed in the several departments as follows:

General	
Assayers	175
Melter and refiners	13
Coiners	46
Engravers	91
	8
Total	333

VISITORS.

A large number of visitors from all States of the Union and from foreign countries visited the mint during the year, 84,763 having been shown through the building by the several guides.

MINT OF THE UNITED STATES AT SAN FRANCISCO.

This mint was in operation throughout the year. The details as to deposits and coinage operations are given in tables elsewhere.

The appended extracts from the report of the superintendent of the mint are submitted:

Until the year 1897, this mint was operated with an equipment unchanged in any respect from the date of its first installation, more than 40 years before. However, that was a condition existing in all United States mints. With the advent of the McKinley administration came a Director of the Mint who saw there was need of remodeling the methods of mint operations by the introduction of improved machinery, the use of electric drives instead of steam power, the adoption of gas and oil as a substitute for coal and coke in melting furnace work and the adoption of the electrolytic method of refining in place of the old acid system, all of which was conducive to better or higher class of work, and with neatness and economy and greater comfort to the employees.

With the mint at Philadelphia the changes were brought about in comparatively short time as a new building was erected and the new machinery installed while the old mint was operated without interference until the new quarters were ready for occupancy, but with this institution the conditions were quite different. The extraordinary demand for coinage from it began with the Alaska gold discovery in 1897, a demand that exceeded any requirement way beyond anything in its history or even expected of it, and this was augumented by the necessity of making the coinage for the Philippines here. Under this call upon its resources, it operated to the full capacity of its machinery and the excellent force of men employed without cessation or lull for nearly 13 years, making a record for quantity, quality, and cost that was a source of pride to all concerned. Yet it was during this period that the changes above alluded to were made. Prior to the alterations, the power plant consisted of one 150-horsepower walking beam steam engine, one 30-horsepower Corliss steam engine and four other smaller steam engines—six in all, steam being supplied by a battery of four Scotch boilers of the marine type. The rolling mills were all driven from one main shaft 8 inches in diameter and 60 feet long. The coining presses were all operated from one shaft line. Thus, if only one press was needed to be run, the least power that could be used was the 30-horsepower engine. The efficiency of the 150-horsepower engine was only about 50 per cent of its rating, consequently the great waste in the power plant was obvious.

The old-fashioned coal and coke melting furnaces were changed one by one to gas or oil burning, so that the melting was done by gas flame in some instances and by oil in others. Electric motors one by one were placed in position and made to drive different machines and by degrees took the place of steam power.

New rolling mills, punching machines, annealing and cleaning devices of the latest pattern were installed. In fact, an entire change in the coinage machinery was perfected, with the exception, I may say, of the presses. The presses used in the United States mints are equal, if not superior, to any press that has been devised, but even the presses have been equipped with additional devices that have greatly added to their efficiency.

The old acid refining plant was entirely removed and in its place was substituted an electrolytic refinery which for neatness, capacity, and efficiency is unequaled, unless it shall be by the new refinery that is being installed in the New York assay office.

The old methods of adjusting were dispensed with and hand scales replaced by the modern weighing machines.

It is something of interest to know that all of these changes made, whereby the institution was brought up to the highest standard of a modern plant, were accomplished, as I said before, while it was being operated to its fullest capacity on coinage, without the loss of one single day in operation. To accomplish this has taken much time, but the work has been completed, and the San Francisco Mint is equal to any other institution in the matter of modern machinery and efficiency. It may well be said here that our Government has not relied or depended on other Governments for ideas in modernizing or remodeling its coinage machinery, for almost in every instance the new machines are the invention of, or have been constructed on ideas offered by, officers engaged in the mint service. This mint has contributed its share in the general improvement of machinery. It was here that the rolling mill now in use was made and brought up to its high grade of efficiency. Perfect work in the rolling mill simplifies all other operations. The officers of this institution spent much time and study and experimenting in perfecting the rolling mills, and when success finally crowned their efforts the introduction of the automatic cutting and weighing was a simple matter.

Accompanying this review I beg to call your attention to the statement of Asst. Coiner P. A. Kearney on matters connected with rolling mill work.

I also desire to refer to the statement herewith made by Mr. E. R. Leach, superintendent of the melting and refining department, relating to the adoption of a simple method for recoveries of volatilized metals in the melting department, also to the discovery of a refining-furnace product by Mr. E. J. Wagor, superintendent of the refinery, a matter of considerable scientific interest as something new and possibly unheard-of before, and also direct attention to the very interesting report by Mr. M. A. Martin, assayer of this mint, bearing on matters relating to the accuracy of assay work, and particularly to the method devised by him of assaying fine silver, a method which seems to reach more reliable and accurate results in the determination of the silver contents of certain classes of bullion.

The assayer of the mint reports, in part, as follows:

During the fiscal year several interesting experiments were inaugurated in the hope of increasing the efficiency of the assay department, the most important of these coming under the following heads: "The relation between the surcharge and the denomination of a gold proof," "The modification of the Gay-Lussac method for the humid assay of fine silver bars," and "The determination of silver in mass melts of gold bullion." The results of these investigations appear below.

THE RELATION BETWEEN THE SURCHARGE AND THE DENOMINATION OF A GOLD PROOF.

In a large institution like the San Francisco Mint, where the daily deposits of gold bullion vary in fineness from 200 or less to 990 and over, it is evident that frequent instances necessarily occur where the question of suitable proof denominations has an important bearing upon the problem of reporting the assays with as much promptness as is consistent with a proper degree of accuracy.

Upon many occasions the work has been so congested as to render it extremely inconvenient, if not actually out of the question, to accompany the assays of certain deposits of widely varying finenesses with individual proofs of special denominations. In the effort to obviate this difficulty, a lengthy series of experiments was conducted with the idea of ascertaining the definite relation, if such existed, between the respective surcharges of gold proofs made up with varying amounts of gold, but cupeled and parted under identical conditions.

The proofs were weighed up in sets of eight, each set being run in two rows of four cupels each, with 40 grains of lead, 15 gold weight of copper, and 2 parts of silver to 1 of gold. Each set was subjected to two 10-minute partings in 32° nitric acid.

To avoid drawing any erroneous conclusions from results possibly due to position in the furnace, the odd-number sets were run with the higher proofs in the front row of cupels and the lower ones in the row behind, while in the case of the alternating sets the low proofs were placed in front with the higher proofs in the rear. One set containing duplicate proofs of four denominations was run through daily for a period of four weeks. The results were as follows:

Set.	Denominations.						
	1,000	900	800	700	600	500	400
1	1,000.3	900.1	799.9	699.9

		900.25	800.2	700.1	599.9		
17				700.25	600.05	499.9	399.7
				700.2	600.1	499.9	399.8
18				700.05	599.9	499.85	399.7
				700.05	599.95	499.8	399.7
19				700.2	600.0	499.9	399.75
				700.2	600.1	499.9	399.8
20		900.6	800.5	700.3	600.1		
		900.6	800.4	700.25	600.1		
21		900.1	800.0	700.0	599.8		
		900.1	800.0	699.9	599.8		
22		900.4	800.25	700.1	600.0		
		900.4	800.25	700.1	600.0		
23		900.5	800.4	700.3	600.1		
		900.5	800.35	700.2	600.05		
24		900.35	800.3	700.15	600.0		
		900.4	800.2	700.1	600.0		

The average cornet weights of the different denominations were as follows:

1,000	900	800	700	600	500	400
1,000.56	900.35	800.22	700.11	599.96	499.82	399.68

A study of the above figures shows conclusively that under identical conditions, and between certain limits, the surcharge of a gold proof increases in direct proportion to the amount of gold added, this increase in the case of proofs running from 400 to 900 fine averaging slightly over one-tenth of a thousandth for each extra hundred points of gold added. It is also demonstrated that the same cupelling temperature which gives a surcharge of three-tenths of a thousandth upon a 900 proof will inevitably give us "minus" proofs in the cases of all denominations under 600.

The practical application of the inference to be drawn from these conclusions is very apparent. Whenever, for instance, it is inconvenient to run a proof of special denomination with one or more assays of bullion between 400 and 700 fine, it is possible to correct the weights of the assay cornets by means of an arbitrary surcharge based upon the surcharge of the regular proofs which have accompanied the sets. By this means it is possible to save considerable time without materially endangering the accuracy of the assayer's figures. The method is, of course, not applicable to low-grade bullion relatively high in base, special proofs being required for such deposits.

The following table gives the assay results upon several bullion samples accompanied by 900 proofs, but corrected by means of arbitrary surcharges. The results subsequently obtained in assaying these samples separately are included for purposes of comparison:

No.	Assays with 900 proofs.				Special assays.		
	Cornet.	Proof.	Arbitrary proof.	Reported.	Cornets.	Proof.	Net.

MODIFICATION OF THE GAY-LUSSAC METHOD OF ASSAYING FINE SILVER BARS.

Differences having arisen during the latter part of 1911 between this mint and an outside refinery, regarding the fineness of certain silver bars purchased by us for coinage purposes, it was considered advisable to adopt some system of humid assaying which would enable the assayer to determine the silver contents of such bars to a closer degree of accuracy than was practicable under the straight Gay-Lussac method.

With this idea in view a modified method was utilized, said modification consisting in the use of ammonium sulphocyanate instead of the usual decinormal salt to determine the amount of silver unprecipitated by the standard salt solution. This process, while occupying more time than that consumed by the old method, gave results which not only agreed closely, but which enabled us to determine the finenesses of the bars in question to the tenth of a thousandth. The assays follow:

No.	Silver fineness.		No.	Silver fineness.	
	A.	B.		A.	B.
556	998.9	998.9	559	999.0	998.8
	998.9	998.9		998.9	998.8
557	998.9	998.9	560	999.1	999.2
	998.9	998.9		999.1	999.2
558	998.9	998.8	561	999.1	999.1
	998.9	998.8		999.1	999.1

In preparing to run through a series of fine silver assays we weigh up two proofs of pure silver at 1,020 milligrams, dissolve in an ounce of 32° nitric acid (retaining bottles on sand bath until the fumes of nitric acid have disappeared), and 100 c. c. of standard salt solution and agitate for five minutes in the usual manner. The clear solutions are then decanted into fresh bottles (humid assay pattern), care being taken that no appreciable amount of the chloride passes over with the nitrate. If the decantations have been performed with the proper care it will be safe to ignore the comparatively minute amount of silver solution retained in the chloride precipitates. However, we usually wash in a little distilled water, and decanting as before, add the wash water to the balance of the solution.

Five c. c. of a saturated solution of ferric ammonium sulphate are now added as an indicator, and each bottle in turn is placed under a burette containing a solution of ammonium sulphocyanate, 1 c. c. of which will precipitate 1 milligram of silver. The sulphocyanate is run in a few drops at a time, the bottle being rotated in the

hand after each addition, until the precipitated silver commences to settle to the bottom. The reagent is now added drop by drop until the appearance of a faint brownish red color that will not disappear on shaking.

This point having been reached, a reading is taken of the burette and the amount of silver precipitated by the standard salt solution determined by differences. For instance, if it was necessary to add 18.9 c. c. of the sulphocyanate solution in order to reach the end point, the standard salt is credited with having precipitated 1,020 milligrams minus 18.9 milligrams, or 1,001.1 milligrams of silver.

The strength of the standard solution having been determined, samples of the bars to be assayed are weighed up at 1,020 milligrams each and treated as described for the proofs. The calculation of the actual fineness of a sample is very simple. Taking the direct reading of the burette as representing so many milligrams of silver precipitated by the sulphocyanate, the amount thus determined is added to the number of milligrams precipitated by the standard salt, and the sum divided by the weight taken for assay. Thus, if it has required 18.1 c. c. of sulphocyanate to arrive at the end point in a certain assay, we have:

	Milligrams.
Precipitated by standard salt (as shown by proofs)	1,001.1
Precipitated by sulphocyanate (as shown by burette)	18.1
Total	1,019.2

1,019.2 divided by 1,020 equals 0.9992.

The sample, therefore, is 999.2 fine in silver.

In making up the sulphocyanate solution about 8 grams of the salt are dissolved in a liter of water. After determining the strength of this stock solution by means of pure silver proofs weighed at 200 milligrams each, a portion is diluted and tested until 1 c. c. will precipitate exactly 1 milligram of silver.

To secure correct results it appears essential to add a uniform amount of acid upon each occasion, to boil off all traces of nitric oxide fumes, to decant the solutions with close uniformity of detail and to perform this operation as soon as possible after the addition of the standard salt, to use a uniform quantity of the indicator and to conduct the titrations at approximately the same temperature.

It is especially necessary to use care in decanting. No harm would probably be done if quite an appreciable amount of silver nitrate was retained in the chloride, provided that the same amount had been retained in the case of the proofs, for the amount of silver thus neglected would be credited to the standard salt solution and an error thereby avoided. The moment, however, that the decanting operations cease to be uniformly executed, the value of the method is vitiated and the results become unreliable.

It may be suggested by some assayer that the solutions should be filtered instead of decanted. We have done this upon several occasions, but do not find that the resulting slight increase in accuracy is of sufficient importance to warrant the consumption of extra time involved.

THE DETERMINATION OF SILVER IN MASS MELTS OF GOLD BULLION.

For several years past we have experienced no little difficulty in the endeavor to correctly determine the silver contents of gold bullion mass melts by means of cupellation, the many varieties of alloy usually present in bullion of this character rendering it almost impossible to obtain a close agreement between duplicate assays.

Early in the fiscal year we experimented with a different method, the results of which have been so satisfactory as to justify its permanent adoption. The details of the process are as follows:

A scorifier about two-thirds full of 98 per cent potassium cyanide is placed in the front of the muffle furnace, care being taken that the contents are kept below the boiling point. The assay is weighed up at 1,000 gold weight, wrapped in a small sheet of lead foil weighing about 1 gram and immersed in the molten cyanide. A piece of stick cadmium weighing approximately 5 grams is immediately added, and by a slight rotation of the scorifier is brought into contact with the bullion sample. The metals unite rapidly, a complete alloy usually being formed in two or three minutes.

The contents of the scorifier are then poured into a round bottom mold, allowed to cool for a few moments, and the cadmium button separated from the cyanide, which may be used a second and a third time before being discarded. The button is cleansed with hot water, placed in an ordinary humid assay bottle, and boiled in 2 ounces of 32° nitric acid. When the brownish red fumes have entirely disappeared, the solution is diluted with 100 c. c. of distilled water and 5 c. c. of a saturated solution of iron alum added as an indicator. The contents of the bottle are then titrated with a solution of ammonium sulplocyanate, 1 c. c. of which is equivalent to 10 gold weight

of silver. The complete precipitation of the silver is, of course, indicated by the formation of a brownish red color which will not disappear on shaking. The fineness of the sample is obtained by multiplying the direct burette reading by 10.

Operations of the assay department, fiscal year 1912.

MELTING AND REFINING DEPARTMENT.

The melter and refiner submits an extract from the report of the superintendent of the refinery on the discovery in a refinery furnace product of platinum arsenide.

During the last year two matters of sufficient interest to merit mention in the Annual Report of the Director have occurred in the melting and refining department of this mint.

One was the discovery in a refinery furnace product of platinum arsenide by Mr. E. J. Wagor, superintendent of the refinery, an account of which is inclosed herewith.

The other relates to the use of wire cloth instead of single wires for collecting dust in settling chambers. In the attic above the refinery melting room is a long, horizontal flue leading into a settling chamber, 9 feet 5 inches wide by 12 feet long by 6 feet high, just before entering the stack. In July, 1911, a part of this large chamber was equipped with baffles, consisting of sheets of wire cloth 6 feet by 4 feet in size, hung transverse to the current on rods 4 inches apart. Two sheets were hung on each of 10 rods and so arranged that a complete clogging of the meshes would not choke the draft. That is, while the chamber is 9 feet 5 inches wide, two pieces side by side cover only 8 feet, the remaining opening of 1 foot 5 inches being left first on one side then on the other, so that the draft could zigzag through even though the meshes were closed completely by the dust.

The cloth used had a $\frac{5}{8}$-inch space (i. e., actual opening was $\frac{5}{8}$ inch square) and was made of iron wire, size No. 8 W. & M. (equals No. 6 B. & S. or equals 0.162 inch diameter). Each piece contained 708 linear feet of wire, the 20 containing 14,160 feet. By actual time, two men hung and adjusted the 20 pieces, containing over $2\frac{1}{2}$ miles of wire, in 10 minutes.

At settlement, June, 1912, after being in use 11 months, three times as much dust was collected as in previous years before the installation of the wire baffles. And while the dust from this part of the chambers usually produced about 10 ounces of gold, this year 16 ounces were obtained, and this in spite of the fact that less than two-thirds as much gold was melted as usual.

This method of using wire cloth, I believe, is new and certainly is vastly superior to that of single wires, on account of the time and labor saved in hanging and cleaning.

PLATINUM ARSENIDE—A FURNACE PRODUCT.

Of no commercial importance, but perhaps of some scientific interest is the fact that platinum arsenide may be formed under certain conditions in the operation of melting the anode mud from our copper refining cells. Of special interest, inasmuch as the

crystals so formed are identical with the rare mineral sperrylite, the only mineral in which platinum is found as an essential constituent and which has been found only in the province of Ontario, Canada, and in Macon County, N. C., and in copper ore at the Rambler mine, in Wyoming.

Twenty-three years ago Francis L. Sperry, connected with the Vermillion mine, near Sudbury, Canada, sent to Horace L. Wells for examination a bright crystalline substance which had been found in pockets of decomposed masses of ore, in conjunction with sulphides of copper and iron. Wells found this bright-looking sand to be platinum arsenide ($PtAs_2$) and he named his new mineral sperrylite. Wells also produced artificial $PtAs_2$ by heating a known weight of platinum to redness and passing over it vapor of arsenic in a current of hydrogen, confirming the claim of its previous preparation by Murray.

The anode sludge, the melting of which produced the crystals of platinum arsenide, differs from ordinary copper sludge and is quite variable in composition, dependent wholly upon the anode content, but will probably average 20 to 30 per cent of the precious metals, including 2 to 4 per cent platinum, copper in fragments and powder, sulphate of lead, basic sulphates of antimony, bismuth and tin, sulphides of silver, copper and iron, arsenates and antimonates, silica, carbon, and fragments of slag. These slimes are washed thoroughly, dried, and melted in crucibles with borax and soda, and allowed to settle.

The crystals were found in a very thin layer of speiss, which separated from the metal with considerable difficulty. The fact that the crystals are not attacked by acids generally, and only slightly by aqua regia, led to their discovery in testing the speiss. In washing free from acid, it was noticed that the crystals were not easily wet by water, and, notwithstanding their high specific gravity, showed a marked tendency to float when brought to surface of the water, a marked characteristic of the mineral.

The microscope develops striking tin-white, isometric crystals with extremely brilliant crystal faces and sharp-cut edges. The crystals are mostly fragmentary, showing cubes, octahedrons, and pyritohedrons, and a conchoidal fracture.

When heated rapidly in a porcelain crucible, a slight decrepitation is noticed, and then abundant fumes of As_2O_3 are given off until a certain point is reached, when the mass fuses readily to a hollow silver-white globule, which is slightly malleable. Heated slowly, all the arsenic is driven off, leaving a platinum sponge. A known weight of $PtAs_2$ was heated very slowly until fumes ceased to be given off. It was then given high heat, cooled, and weighed. The loss in weight accounted for 42.7 per cent arsenic, which agrees within 0.8 per cent of the theoretical amount.

The hardness is between 6 and 7; the specific gravity is given as 10.6 and the fusibility as 2. The crystals when dropped upon a red-hot platinum foil instantly melt, giving off white fumes of As_2O_3, and porous excrescences are formed on the platinum, which do not differ in color from the untouched portions of foil. This is given by Wells as the most characteristic reaction.

The melter and refiner received, operated upon, and delivered gold and silver bullion and minor-coinage metal during the fiscal year 1912, as follows:

COINING DEPARTMENT.

The coiner of the mint submits a report on the new equipment installed, the results of experiments made, and improvements achieved. He says:

Uniformity of rolling is the goal toward which the various mints have been directing their best efforts for many years. The accuracy attained is remarkable, considering the difficulties to be met in rolling strips of metal of varying degrees of hardness. The enormous pressure necessary to produce a displacement of the metal and the strain put upon the rolls, bearings, and housings varies with the hardness or softness of the metal being rolled and the amount of "draft" or squeeze.

It has long been known that bodies really solid do not exist. Let us then consider metals as semifluid bodies, whose forms may be changed by pressure. All metals possess some elasticity, and will resist pressures or strains to their limits of elasticity before permanently changing their forms or taking on "permanent set."

The strains put upon the housings cause them to stretch to a greater or less extent as the pressure varies, thus making wider or narrower, as the case may be, the opening between the rolls through which the metal passes, thereby varying the thickness of the strip.

The problem of properly lubricating the journals to prevent friction is one of great difficulty, when we consider the possibility of squeezing the film of oil out of the boxes and thereby changing the thickness of the strip, resulting in a variation sufficient to condemn the blanks punched from it. The thinnest possible film of oil must constantly be kept in the bearings when the rolls are in operation. Intermittent lubrication would result in imperfect work.

The process of rolling hardens the metal and causes it to lose its malleability. The working of the metal causes its temperature to rise. Tests on silver show this rise of temperature to be in some instances as much as 150° Fahrenheit from start to finish of rolling.

The hardness of the metal varies with the temperature at which it is worked, and as some of the melts, or some of the strips in a melt will cool more rapidly than others, the rolling of each strip is not finished at a uniform temperature.

Some of the heat generated in the metal by rolling passes into the rolls and, together with the heat of journal friction, causes expansion of the various parts, again interfering

with the uniform thickness of strips operated upon. The rise of temperature of the rolls and bronze boxes is at times from 80° to 100° Fahrenheit. Taking 0.00000599 as the coefficient of expansion of steel, 0.00001037 as that of brass or bronze, 18 inches as the outside distance of roll journals, and 3 inches as the thickness of the bottoms of the two boxes, then the expansion for 1° of temperature in the rolls and boxes would be 0.000011577 inch, and for 80° would be 0.000926 inch. As this expansion would be from fixed points in the housing inwardly, it would result in making the strips thinner. But when this heat is transmitted to the housings by conduction, and the housings in turn expand, the opposite effect is experienced and the counteracting tendency would be to make the strips thicker. Of course, this tendency is not so quickly manifested because the rise of temperature in the housing is slower than that of the rolls and boxes.

The hardness or softness of gold is much more uniform than that of silver, and records show that it is possible to attain much greater accuracy in rolling with gold than with silver.

Having all these varying factors to contend with, it is nevertheless possible to do comparatively accurate rolling if the metal operated upon is fairly uniform in hardness, as that is the principal obstacle to perfection. As the diameters of the punched blanks are practically constant, their weights must vary according to their thickness.

The following tables give the legal weights and tolerances of the several denominations, both gold and silver, coined here at the present time, together with the thickness of standard cut blanks and variations of thickness which would equal change of weights of different pieces corresponding to one grain—to legal tolerance from standard—and to working tolerance:

Table I.

1.25	.000427	1.25	.000660	1.25	.001231

Of course, in the practical work of rolling it is not possible to make such close measurements with a micrometer as the foregoing table indicates would be necessary. The

strips are rolled down as close to standard as possible, test blanks are punched out and weighed, and the final adjustment of the rolls made in accordance with the weight test. But it is nevertheless true that when the standard point of thickness is reached the greatest allowable variation from that point in operating on double-eagle strips is 0.0000562984 of an inch, and a variation of 0.000080426 would cause the blanks to reach the legal tolerance limit in weight. The total allowable working variation, 0.70 grain, between a blank 0.35 of a grain heavier than the standard and one 0.35 grain lighter than standard is equal to 0.000112596 inch in thickness.

It was formerly the custom in this mint, as it was at one time in all the mints, to roll the strips down close to standard, anneal them, and finish the operation by passing them through the small stationary rolls of the drawbench die. The heavy blanks from these strips, on reaching the adjusting room, were filed down to weight by hand. At that time the weighing and adjusting was all done by hand and the expense of maintaining the adjusting room was very great; the labor cost for adjusting at times amounted to nearly $200 per day. The amount of adjusted blanks produced varied, as now, in accordance with the closeness and uniformity of the rolling. The comparatively small additional expense of maintaining the annealing process and the draw bench at that time was justified by the lowered labor cost of adjusting resulting from it. This was before the rolling had been brought up to its present standard, and before the perfecting and adoption of the automatic weighing and reducing machines.

The lessened cost of adjusting under the new conditions did not warrant the longer maintenance of the drawbench, and the wisdom of discarding it is unquestioned. A new impetus was thus given to the already strenuous efforts to perfect the rolling, which is resulting in permanent good to the service. During the last year two of our 10-inch rolling mills were changed from the wedge adjustment of the bottom-roll type to the screw adjustment of the top-roll type, which proved to be quite an improvement, as the number of joints is lessened and the rolls and bearings are held more firmly in the housings.

The boxes of the bottom roll rest directly upon the frames in the housings, and the top roll is held firmly against the upper bearings by means of rods passing through the top of the frame. The tops of these rods are fastened to the case which contains the worm and screw adjustment gears of the pressure screws by means of adjustable nuts resting upon coil springs. The bottoms of these rods are screwed into the bronze frames containing roller bearings. The top roll is supported by these roller bearings and, together with its bronze boxes, is held up against the housings.

The roll can be more firmly held in place, with less friction, by means of these roller bearings than it could with the bronze boxes formerly used, and the open frame allows for greater radiation of the heat generated in rolling. The rollers are made of tool steel, hardened and ground, and are run in bronze cages of suitable design to fit housings.

The upper roll is fitted with pressure controlling and indicating mechanisms consisting of two accurately turned tool steel screws, 3 inches in diameter, "V" thread, four threads per inch, passing through bronze nuts pressed into and locked to housings; ends of screws hardened and working in hardened steel sockets on bronze bearings.

The adjustment of upper roll is positive, both up and down; heavy compensating coil springs with adjustable nuts surround pressure screws and rest on top of housings. The pressure-adjusting screws are actuated by worm gearing with handwheel arrangement, having adjustable micrometer indicator dial, graduated and reading to 1/20,000 of an inch.

Each pressure screw is capable of separate adjustment to change position of roll not more than 1/2,000 of an inch. These rolls are equipped with universal coupling drives, in place of the wabbles formerly used, and the jar upon the machines and the noise were almost entirely eliminated.

These changes were not completed until late in the fiscal year.

During the year we weighed 905,473.19 ounces of half dollars, of which 55,687.40 ounces, or 6.1 per cent were condemned on account of weight; 93.9 per cent, or 849,785.79 ounces, was within the working limit; therefore 93.9 per cent of the strips from which these blanks were punched did not vary from standard by more than .000427 inch in thickness; 353,237.30 ounces of quarter dollars weighed showed 96.2 per cent, or 339,790.71 ounces within the working limit; 96.2 per cent of the strips from which this was cut did not vary from standard by more than 0.000660 inch in thickness; 464,859.98 ounces of dimes were practically all within the tolerance limit, or nearly 100 per cent within a variation of less than 0.001231 inch in thickness.

This metal was not operated on by the rolls which were being changed to the screw adjustment.

We were able, however, to get a test run on eagle strips when the rolls were completed, and the following statement of the adjusting-room record of operations on eagle blanks punched from these strips shows how satisfactory the test was:

Adjusting-room record of operations on eagle blanks for April, 1912.

Items.	Ounces.	Per cent.
Amount inside limit	145,392.84	84.38445127
Heavies	21,760.00	12.62927156
Condemned punches lights	5,145.30	2.98627715
Heavies filed light	718.52	
Heavies recovered by filing machine	20,977.53	12.17513433
Per cent of total operated on condemned by filing machine		.00454137
Total condemned lights and filings	5,927.77	3.4404140
Amount good work	166,370.37	96.55958561
Amount condemned	5,863.82	
Amount filings	63.95	
Total ounces operated on	172,298.14	
Filings per 1,000 ounces operated on	.37	

Over 84.38 per cent of blanks as they came from the punch, without any shaving or filing whatever, were within the working tolerance limit of 0.35 grain above to 0.35 grain below standard; or, in other words, over 84.38 per cent of the metal rolled did not vary either way from standard more than 92/1,000,000 of an inch.

This is fairly accurate rolling, even for the mint service, but we hope to improve upon it.

The refinery also produced:

	Value.
Electrolytic copper, 5,126.67 pounds	$908.40
Sponge platinum, 70.60 ounces	2,471.04
Sponge palladium, 12.82 ounces	320.50
Osmiridium, 1.18 ounces	41.30

The surplus in gold is due to the recovery of metal lost in previous years and the surplus in silver to the recovery of silver from fine gold deposits re-refined in this mint.

COINING DEPARTMENT.

The coiner received gold, silver, and bronze from and delivered to the superintendent during the fiscal year 1912 as follows:

Item.	Gold.	Silver.	Bronze.
Receipts:			
Ingots	*Stand. ozs.* 737,394.400	*Stand. ozs.* 3,576,494.82	*Troy ozs.* 1,957,633.66
Deliveries:

Percentage of coin produced to amount operated upon	54.58	58.12	67.91

NUMBER OF EMPLOYEES.

The number of employees in the institution at the close of the year was 124, distributed as follows:

Department.	Employees.
General	58
Melter and refiner's (including refinery)	30
Coiner's	26
Assay	10
Total	124

VISITORS.

During the year 41,369 visitors were shown through the mint.

MINT OF THE UNITED STATES AT DENVER.

This mint was in operation throughout the year. Nickel coinage was executed here and the first delivery amounting to $1,000 in these coins was made on February 5, 1912. The first coinage made here of bronze 1-cent pieces was on May 20, 1911.

On January 12, Mr. John C. Wells, assistant coiner, was made coiner to succeed Mr. Jabin B. Baldwin, deceased.

Redeposits of bullion were received during the entire year from the United States assay offices at Seattle, Deadwood, Helena, Boise, and Salt Lake.

ASSAYING DEPARTMENT.

The operations of this department during the fiscal year 1912 were as follows:

Items.	Samples operated on.		
	Gold.	Silver.	Total.
Deposits	3,301	691	3,992
Redeposits	1,495		1,495
Exchange bars	38	15	53
Return bars	3		3
Purchase		540	540
Anode melts	57	502	559
Mint fine melts	203	197	400
Ingot melts		808	808
Consolidated melts	3		3
Experimental samples	81	175	256
Bullion assay samples	4		4
Copper melts	7		7
Superintendent's grain bar	15		15
Melter and refiner's settlement bars	14	17	31
Coiner's settlement bars		2	2
Assayer's bars	26	12	38
Coin samples		906	906
Sweep samples	26	26	52
Forest Service samples	129	129	258
Total	5,402	4,020	9,422

Number of actual assays made.

Gold	36,484	Forest Service	386
Silver	31,675	Total	68,816
Sweeps	271		

There were made, 60,000 cupels, and 60,000 pieces of lead cut and rolled.
The average cost per assay during the year was $0.259.

Determinations.

Fine gold.		Fine silver.	
Fineness.	Melts.	Fineness.	Melts.
999.3	11	999	78
999.4	23	999½	53

Miscellaneous			71
Total			8,530

Ingot melts condemned or remelted	None.
Number of employees in the refinery	15
Number of employees in the melter and refiner's department	21

The sweeps cellar was operated under the supervision of the superintendent of the mint.

COINING DEPARTMENT.

During the fiscal year 1912 the coiner received and operated upon 3,323,873.95 standard ounces of silver and produced therefrom 2,203,188.83 standard ounces of coin, valued at $2,741,840, and representing 22,098,880 pieces. The loss in operations was 894.69 standard ounces, being 26.92 per cent of the legal allowance. The per cent of coin produced to the amount operated upon was 66.28.

The first nickel coinage in this institution was executed during the year. One-cent pieces were also coined. The per cent of coin to the amount operated upon was as follows: Five-cent nickel, 66.66, and 1-cent bronze, 75.13.

Receipts and deliveries by the coiner.

Items.	Silver.	Nickel.	Bronze.
Receipts:	*Standard ozs.*	*Troy ozs.*	*Troy ozs.*
Ingots	3,323,873.95	1,123,297.60	1,681,002.75
Deliveries:			
Coin	2,203,188.83	748,747.70	1,262,856.30
Clippings, etc	1,119,790.43	373,175.10	417,163.70
Total	3,322,979.26	1,121,922.80	1,680,020.00
Wastage	894.69	1,374.80	982.75
Amount operated upon	3,323,873.95	1,123,297.60	1,681,002.75
Percentage of coin produced to amount operated upon	66.28	66.66	75.13

In cleaning up at the end of the fiscal year 31.65 standard ounces of gold were recovered from the sweeps.

EMPLOYEES.

The number of officers and employees in the mint at the close of the fiscal year was as follows:

General department	49
Assayer's department	8
Melter and refiner's department	21
Coiner's department	15
Total	93

VISITORS.

Visitors to the number of 69,363 witnessed the coining operations during the year.

UNITED STATES ASSAY OFFICE AT NEW YORK.

REMOVAL.

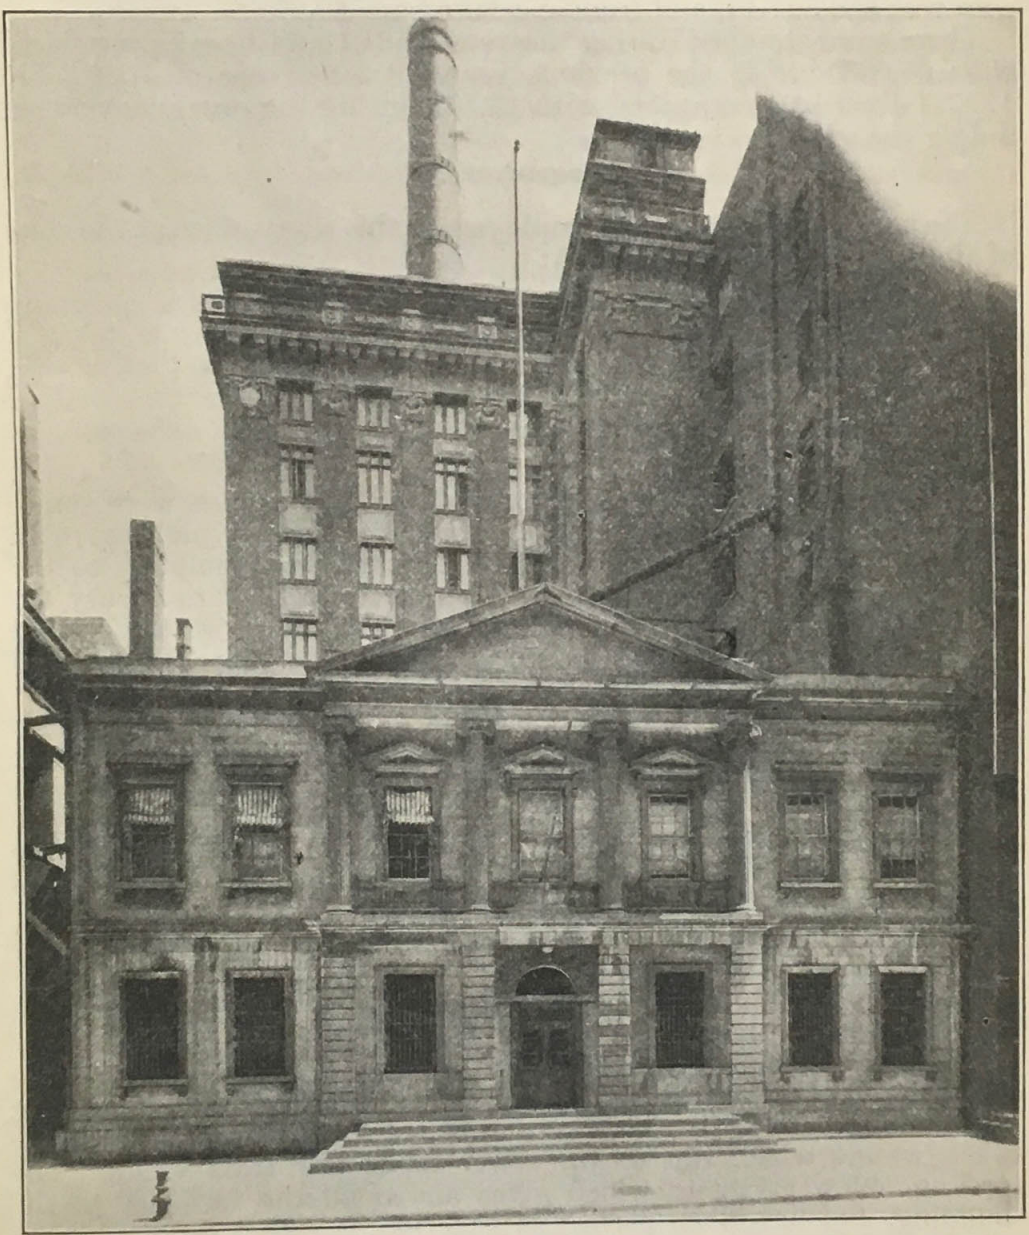
The year has been a notable one for this institution, as, during December, 1911, and January, 1912, the old building at 32 Wall Street, which has been the home of the United States assay office at New York since it was opened in 1854, was vacated and the work transferred to the new refinery building in the rear of the old building. The employees deserve the highest praise for their loyalty and faithfulness when they were working during the last two years in the insanitary and dangerous conditions of the old building, and it is hoped that the new building on Wall Street will soon be erected, as the temporary quarters for the clerical force in the refinery building are not suitable for their work.

It is worthy of note here that the old building was erected in 1823, presumably for the Second Bank of the United States, and occupied by the New York branch of that bank until 1836, when the bank went into liquidation. The property was then transferred to the Bank of the State of New York, which sold it to the Government in 1854. From 1854 to 1873 the United States assay office occupied the upper part of the building and the first floor was rented. A picture of the old building, now about to be demolished, is given herewith. A considerable expression of sentiment has been heard in Wall Street against the demolition of the old building, and the the architects

have seriously considered incorporating the front wall in the new building in order to preserve the historic landmark.

REDEPOSITS.

Since January 1, 1912, redeposits have been received from the assay office at Charlotte, N. C., to the amount of 1,746.626 standard



United States Assay Office Building, Wall Street, New York City; erected in 1823, occupied by the Assay Office in 1854, and vacated for demolition in 1911.

ounces of gold and 278.22 standard ounces of silver, and from the mint at New Orleans, La., 40,825.913 standard ounces of gold and 28,069.77 standard ounces of silver.

GOLD BARS ISSUED.

Gold bars were issued to depositors for domestic use in payment for bullion for $4,120,950.44, and gold bars were exchanged for gold

coin for domestic use for $24,629,211.61, making a total value of gold bars issued for domestic use in the arts, etc., of $28,750,117.05, showing a decrease of $277,801.32 as compared with the previous year. The value of gold bars exchanged for gold coin for export was $20,124,905.85, being an increase compared with last year of $19,840,853.21. The income for the exchange of gold bars for gold coin was $20,564.45, and from special assays $2,021.

There were stamped during the year 63,812 gold bars as compared with 65,003 during the previous year, or a decrease of 1,191, and 12,873 silver bars compared with 13,572 during the previous year, or a decrease of 699.

EMPLOYEES.

The number of officers and employees in this assay office at the close of the fiscal year was as follows:

General department	43
Assay department	14
Melter and refiner's department	32
Total	89

DEPOSIT MELTING ROOM.

The almost intolerable conditions of the assay office were somewhat relieved September 15, 1911, when the deposit melting room was moved from the cramped quarters in the front building to the larger ones in the new building. The dirt and heat necessary for the operations of a melting room were at last placed on the ground floor of a fireproof building specially built for the purpose with high ceilings and sufficient space for the work.

The equipment of the deposit melting room consists of one standard melting furnace and three medium-sized furnaces using oil for fuel, seven gas furnaces of a somewhat smaller capacity than the medium-sized oil furnaces, and two smaller gas furnaces for the small deposits. The use of both gas and oil in the deposit melting room is to insure an uninterrupted service under all conditions and yet to obtain the high temperature and economy of the fuel oil. It would be possible in case of a severe snowstorm to do all the melting by gas in this particular room.

The benches, dumping pans, settling tanks, etc., have all been made fireproof—that is, there is no wood in their construction.

A special lead-lined iron tank with a pan and washing sink above was installed on this floor with its overflow running to a large settling tank in the basement. This system of traps practically insures the wash waters which run to the sewer to be free from value. The pressure blower system which gives air to all the furnaces in the building, and has given perfect satisfaction, is rather different from that generally in use for similar purposes. It is known as a centrifugal compressor and has a rotating element mounted upon the common shaft with the driving element of the motor. This eliminates all gears, belts, chains, etc., and the compressor runs the same speed as the driving motor. The essential characteristics are: The air pressure is constant through all loads, and the power consumption is proportional to the load.

THE REFINING DEPARTMENT.

On December 18, 1911, the melting room of the melting and refining department started operations in the new building. Eight standard oil furnaces arranged around a square, with the necessary tanks, pans, and benches, furnish the equipment of the room. The square, which is in the middle of the room, is built of fire brick and so constructed that it constitutes a settling chamber with the outlet leading from its center to a large flue off to one side. The flue is vertical and connects all furnaces throughout the building to a large settling chamber on the ninth floor. The construction is such that all flues and settling chambers can be easily cleaned and the values obtained from the dust.

The standard furnace is so built that the burner looks directly down in the combustion chamber, which arrangement puts the blow-torch flame against the bottom fire brick instead of the crucible, as is usual in many of this type of furnace.

The make-up room and office occupies the other half of the third floor and contains the necessary working desks, two large scales, one long table with soapstone top covered with leather, and the working vault. The vault has a lowering platform before the door, which allows the floor level of the vault to be the same as the room. The vaults throughout the building have the same construction, and this has proved to be of great value, because it allows the heavy trucks to be moved in and out easily.

The sixth floor contains the shop and the electrical dynamos for producing the proper current for the refining cells, the switchboard, and controlling devices. The three low-voltage machines are separately excited from an outside source and are so connected through the switchboard that any machine can be used on any circuit. The machines are duplicate, and each is capable of producing 1,200 amperes at 20 volts, but only one is run at a time.

The third machine was specially built to produce the pulsating current by placing an alternating current in series with a direct current. This is accomplished by mounting on one bed plate four machines, a driving motor, a direct-current dynamo, a single-phase alternating-current dynamo, and an exciter. One lead from the alternate passes directly to one lead of the direct current machine, and the other two leads go to the gold cells.

The controlling device is unique because of the fact that the 110-volt exciter excites the fields of both the alternator and the direct-current machine, but with a hand rheostat in series with each, thus allowing a relative adjustment of voltage. The fields of the exciter itself are excited by an outside source through an adjustable rheostat. This complete arrangement gives the necessary large range of adjustments to suit every condition that might arise. The value of this combination machine is that it allows the use of anodes containing a greater proportion of silver, does away with the necessity of heating the electrolyte, and makes a slime containing a less quantity of gold.

The low-voltage dynamos have a graphite composition brush and a device that gives a series of end thrusts on the end of the shaft which prevents the brushes from wearing tracks in the commutator.

The shop proper contains a lathe, drill press, shaper, emery and grind stone, and several smaller machines, all of them operated by individual motors. The rolls for making cathodes are located on this floor and are driven by an alternating-current motor. The idea has been to place all possible machines on the sixth floor, so they will be out of acid fumes, and this plan has given all that was expected of it.

The seventh floor has been given over to the silver cells and the precipitating tanks for the foul electrolyte. There are two circuits of vertical cells, each series containing 16 jars placed on a long table built of brick topped with soapstone slabs. The slabs are countersunk, making a ½-inch rim around the whole table, thus preventing drops of the electrolytes from falling on the floor. The two series of horizontal cells are placed on a somewhat higher table but of similar construction. The floor of this room, and the eighth, or gold room, is made of soapstone slabs so that any spill of acid or electrolyte does no harm. A centrifugal hard rubber pump lifts the foul electrolyte from the level of the cells to that of the precipitating tanks and for this purpose is much superior to the reciprocating type, as there are no valves under which small pieces of foreign matter may lodge, interfering with the proper action of the machine.

On March 7, 1912, the current was turned through the gold cells on the eighth floor, which, with the exception of the sweep cellar, completes the plant. The gold cells are set on soapstone-topped tables somewhat similar to those on the silver floor. There are two tables each holding two sets of 12 cells, with a heavy soapstone dividing slab through the middle. On the top of the dividing slab, electrically driven, runs a light shaft line with pulleys at proper intervals. The propellers are carried on wooden arms bolted to the central slab and are driven by a light belt from the shaft line. In cleaning up the entire top of the cell is exposed, thus giving the man in charge ample space for lifting out anodes and slimes. A large soapstone hood with wire reenforced glass for sides gives the proper facilities for the treatment of platinum and palladium solutions.

A testing laboratory is partitioned off from this floor, in which all the foul solutions are tested for values before they pass to the sewer. The different electrolytes are tested for their strength of acid and metal values and also any necessary experimental work done.

TREATMENT OF SWEEPS.

The sweep cellar has been put in operation recently and its equipment consists of a jaw crusher which crushes the sweeps to 1 inch or less in diameter, one mill with 60-mesh screen which grinds the sweeps under water until they are fine enough to pass through the screen to the two settling tanks, and a steam drier. The type of mill is a standard mining machine where the rolls revolve and the pan remains stationary. It is of sufficient size so that it will not be necessary to keep the mill in continuous operation and the men will be available in other places. The drier constantly agitates the wet sweeps so that they can not bake on the bottom. One settling tank is directly above the other and the lower contains a steam siphon which lifts the water to the upper. From the upper tank there is an overflow to the sewer and a connection which leads the water back to the mill so that it may be used over again.

Year's operations in refinery.

Sent to refinery.		Returned from refinery.

		Wastage	1,582.34

Refining operations in the new refinery began on January 11, 1912.

ELECTOLYTIC PARTING AND REFINING OF BULLION.

DESCRIPTION OF THE NEW INSTALLATION.

The Government, in its dealings with the public, purchases both gold and silver, so that a suitable refining process must handle both of these metals. This is accomplished by a double system, one for silver and one for gold. In the system which gives as a product pure silver, the gold contained is also sufficiently refined to pass to the gold process. If deposits which the Government buys are very high in gold contents, 0.850 or above, they pass directly to the gold cells, thus saving much work, but if low, they pass through both processes.

THE SILVER SYSTEM.

In practice, the deposits are so combined that the resulting melt will vary between 250 and 400 parts in 1,000 in gold, 120 parts base and the remaining parts silver. This melt, 3,800 troy ounces, is poured into anodes 16 inches long, 3 inches wide, and ½ inch thick, with a ¼-inch hole at one end for suspension in the electrolyte. Allowing the gold contents in the anodes to vary between the above limits reduces the clerical work materially and is permitted by the process.

Each anode is placed inside a muslin bag, tied at the top, and then suspended in the electrolyte by a gold hook from the proper connection. The cells for the silver refining are 47 inches long, 24 inches wide, and 24 inches deep, and are made from vitreous acid-proof stoneware. The electrolyte contains about 2 per cent free nitric acid and 2 per cent silver nitrate, and this proportion must be practically maintained in order to keep other metals from plating on the cathode. The silver is plated on a thin strip of rolled silver, which is lifted out once in eight hours, and the loosely adhering crystals scraped into a dish. The addition of glue to the electrolyte for preventing treeing has been discontinued. The portion of the crystals which fall to the bottom of the tank are regained periodically and added to the fine silver output. This bottom silver runs almost as fine as does that which is scraped from the cathodes. The silver

and other soluble metals contained in the anodes are gradually dissolved by the action of the electric current, while the gold remains as a coherent mass, retaining the shape of the original anode, but of a spongy nature and very easily broken. One of the functions of the bag is to prevent these easily broken anodes from mixing with the silver in the bottom of the cells, which, if it happened, would necessitate a second refining. In general, the bullion purchased by the Government contains so many base metals that the resulting anode is very brittle, and often breaks before the current has had time to act properly. This fact has necessitated the modification of the vertical cell to what is called the "horizontal cell," so named because the anode and cathode lie in a horizontal position. The position, however, is the important point, for the broken anodes from the vertical cells can be selected out and placed in the horizontal cells, and the refining action will continue. The horizontal cell is slower, and requires more energy than the vertical cell, so that it does not replace the vertical type, but supplements it.

A porcelain basket, with a filter bottom, is used in the horizontal cells to hold the anodes, and the cathode is a graphite plate placed about 4 inches below the other pole. The deposited silver is taken out periodically by means of wooden scrapers and added to the fine silver output. The product from the silver cells runs from 0.999 to nearly 1,000 fine, and if any of this product contains more than 1 part of gold in 30,000 parts of silver it is retreated.

The treatment of the foul electrolyte consists in precipitating the silver by metallic copper and regaining this copper by a chemical process. A hard rubber centrifugal pump aids in the exchange of solutions from one set of tanks to another.

There are 2 sets of 16 vertical cells, each in series across the circuit of 11 volts. The current density is about 6 amperes per square foot, although this varies considerably according to the condition of the solutions and the nature of the anodes. The 28 horizontal cells are connected 2 in series across the same circuit as the vertical cells, and they carry a current density of 35 amperes per square foot. The circulation in the vertical cells is obtained by a glass propeller in each cell, a small belted motor furnishing the necessary power, while no circulation is required in the horizontal cells.

THE GOLD SYSTEM.

There are 4 sets of 12 cells each on the floor above the silver room which are used for gold refining. Each cell is 19 inches long, 15 inches wide, and 12 inches deep, and is made of Royal Berlin porcelain, which withstands the action of gold chloride. The anodes are 8 inches long, 3 inches wide, and $\frac{1}{2}$ inch thick, weighing about 75 ounces, with the top reduced in thickness and having the shape of a triangle, with a hole for suspension at the apex.

The casting molds contain an iron peg which puts the hole through the anode at the time of pouring. It is impossible in this process to entirely submerge the anode as is done in the silver cells, because the gold suspension hook would be eaten off and the anode would drop to the bottom of the tank.

The electrolyte is composed of a 10 per cent solution of free hydrochloric acid containing 30 grams of gold as a chloride to the liter. The anodes run about 0.910 fine with 70 parts of silver, and the product from the cells will average 0.9995 fine.

The use of the electric current in series with the direct current has done away with the necessity of applying outside heat, has reduced the amount of free hydrochloric acid necessary, and has allowed a greater proportion of silver in the anode without resorting to hand scraping.

An effective current density of 70 amperes per square foot is maintained in actual working conditions, and this is easily increased when necessary. The circulation is accomplished by means of small hard rubber propellers driven by a motor.

The slimes and the electrolyte contain all the metals which were in the anodes, and it is here that most of the platinum and palladium gradually accumulate. When the solution becomes foul the platinum is precipitated by sal ammoniac as platinum-ammonium chloride, which is carefully washed and upon heating yields spongy platinum. This by-product of platinum is sold at intervals by the Government, and is a source of income which was lost in the old acid processes. The rare metal, palladium, is also separated by a chemical process and adds to the Government's revenue, but the amount recovered is much smaller than the amount of platinum.

The slimes produced are chiefly a mixture of silver chloride and a finely divided gold, which product is washed throroughly, the chloride reduced to metallic silver by zinc, and the whole poured directly into anodes which are suitable for the silver cells.

The ordinary difficulty of imperfect contacts in an electrolytic process is readily obviated in the Government refineries by using the noble metals as conductors. Thin silver strips, half-rounded, along a hard rubber tube, reenforced through the center by a steel rod, serves the double purpose of a suspension rod and a conductor of the current. The anodes are hung from these rods by gold hooks, which method entirely eliminates all contact problems.

The general arrangement of the cells in the silver and gold rooms is in duplicate, each set ordinarily sufficient to refine all the deposits as they are received. This present year it has been found necessary to run both sets most of the time because of the large surplus of bullion on hand. The chief advantage of two sets is to aid in quarterly settlements without shutting down, by cutting out one and starting the other.

ASSAYING DEPARTMENT.

During the fiscal year 1911–12 there were assayed 10,749 melts of gold deposits and 1,987 melts of silver deposits. Fine gold melts from melter and refiner's operations numbered 303, and fine silver melts 238.

The usual assays of anodes, etc., were made for the refinery and upon the sweeps obtained as well as those incident to settlement and for the Mint Bureau.

Special bullion assays numbered 861, consisting very largely of articles of jewelry and manufacturers' samples, in a number of cases being for the enforcement of the stamping act governing the manufacture and sale of jewelry marked with karat fineness. An anusual feature of our work was the making for the United States district attorney, by authorization of the Director of the Mint, about 500 assays upon over 400 samples of ore, to determine the gold contents.

The necessary cupels for all these operations were made in the department, and since removal to our present quarters in the new refinery building we have been rolling and cutting the silver disks used in our assaying. A gas-operated still has supplied water for our laboratory operations and also for drinking purposes for the other departments where desired. For our laboratory work it is conducted direct to the boiling table. This table has a glass flue and hood set in aluminum frame, so that the acid fumes may be conducted off and still give the light desired for the delicate work performed there.

The steadily increasing quantity of the work done and the effort to keep it up to a high standard of accuracy has made it an exceedingly busy year and prevented any experimental assaying other than that involved in the ones made for the bureau and in the preparation of proof alloys for controlling results in the regular operations.

THE UNITED STATES ASSAY OFFICE AT SEATTLE.

The total number of deposits of gold dust and bullion received at the Seattle assay office during the fiscal year 1911 was 1,822, weighing 578,531.57 standard ounces of the value of $10,363,153.17. The origin of these deposits is shown below:

[1] Foreign gold coin received with mixed deposits are not taken into account as to number.

The average fineness of the bullion deposited was as follows: Gold, 852.8; silver, 123.3.

For convenience in shipping to the mints for coinage, 1,242 bars, each under 400 ounces in weight and aggregating 62,611.62 ounces troy, were melted into 61 large bars.

A summary of the work done in the assaying department during the year is as follows:

Quartation of silver manufactured	ounces	450
Cupels manufactured	number	10,000
Bullion assays made	do	6,500
Ore assays made for gold and silver	do	197
Ore assays made for base metals	do	89
Special bullion assays made	do	36
Mutilated domestic coins tested (gold)	do	51

ASSAY OFFICES AT CHARLOTTE, DEADWOOD, HELENA, BOISE, SALT LAKE CITY, NEW ORLEANS, AND CARSON.

These offices were open throughout the year as usual for deposit of bullion and the details of their operations will be found in tables elsewhere.

DEPOSITS, EARNINGS, AND EXPENDITURES OF ALL OFFICES.

The deposits, earnings, and expenditures of the mints and assay offices during the fiscal year 1912 and number of employees at the close of the year, were as follows:

OPERATIONS OF THE MELTER AND REFINERS AND THE COINERS, FISCAL YEAR 1912.

The quantity of metals operated upon in the different departments of the mints and assay office at New York during the fiscal year 1912 aggregated 13,043,306 standard ounces of gold and 36,144,103 standard ounces of silver. The figures in the table following are the actual figures as obtained at the settlements of the accounts:

GOLD.

WASTAGE AND LOSS ON SALE OF SWEEPS AND GAINS FROM OPERATIONS.

The value of the precious metals wasted in the metallurgical and mechanical departments was $3,969.54. A loss of $5,614.03 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same, as described in the following table:

Items.	Mint at—			Assay office at New York.	Total.
	Philadelphia.	San Francisco.	Denver.		
Melter and refiner's gold wastage	.....	.....	$1,513.90	.....	$1,513.90
Melter and refiner's silver wastage	.....	.....	455.27	$800.62	1,255.89
Coiner's silver wastage	$372.78	$383.37	443.60	.....	1,199.75
Loss on sale of sweeps	1,361.06	455.05	869.06	2,928.86	5,614.03
Total	1,733.84	838.42	3,281.83	3,729.48	9,583.57
Paid as follows:					
From contingent appropriation	930.28	475.51	566.34	.....	1,972.13
From parting and refining appropriation	803.56	362.91	2,715.49	3,729.48	7,611.44
Total	1,733.84	838.42	3,281.83	3,729.48	9,583.57

The gains from operations in bullion during the fiscal year 1912 amounted to $130,546.97, as follows:

Character of gains.	Amount.
Surplus bullion recovered by the operative officers	$29,130.83
Value of deposit melting room grains and sweeps	23,832.74
Net gains on bullion shipped from assay offices to mints for coinage	1,044.01
Gain on light weight gold coin purchased for recoinage	131.07
Receipts from the sale of by-products	76,408.32
Total	130,546.97

Deducting the wastage and loss, $9,583.57, from the gains, $130,546.97, gives a net gain from bullion operation during the fiscal year 1912 of $120,963.40.

Receipts and disposition of gold bullion, fiscal year 1912.

Total	124,129,975.46	180,747,670.15	304,877,645.61	107,357,684.65	197,519,960.96

LABORATORY OF THE BUREAU OF THE MINT.

From the coinage of the calendar year 1911 the assayer of this bureau tested 232 gold and 358 silver coins, all of which were found within the legal requirements as to weight and fineness.

In the gold coins the greatest deviation in fineness above standard (the legal limit being 1 above or below) was 0.4, while the greatest deviation below was 0.5.

The greatest deviation in fineness of silver coins above standard (the limit being 3 above or below) was 2, while the greatest deviation below was 1.5.

The following table and statement summarize these assays:

Fineness.	Philadelphia.		Denver.		San Francisco.		Total.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
898.5				2		1		3
.7		10						10
.9		13				1		14
899.1		14		1		8		23
.3		24		4		6		34
.5	1		1		3		5	
.6	1	21	9	5	17	3	27	29
.7	4		5		19		28	
.8	8	33	17	9	28	8	53	50
.9	17		12		25		54	
900.0	17	31	4	7	13	14	34	52
.1	13		6		5		24	
.2	3	25		13		16	3	54
.4		11	1	9		14	1	34
.7		5		9		8		22
.9		11		3		2		16
901.1		2		5		2		9
.3		1		3		1		5
.5		1						1
.8				1				1
902.0				1				1
Total	64	202	55	72	110	84	229	358
Average fineness	899.95	899.78	899.85	900.25	899.81	900.03	899.87	900.03

Besides the coins tabulated above, two coins from the Philadelphia mint and one from the Denver mint on repeated assays showed wide variations, but within the limits above stated, in the composition of the metal in different parts of the coins. There were also examined 24 Philippine and 10 San Salvador silver coins, all of which were within the legal requirements as to weight and fineness.

As the result of investigation by the bureau assayer upon the methods of assaying followed in our various laboratories, which had been going on for several years, a meeting of six service assayers was convened at the Philadelphia mint on April 18 and continued until May 4, 1911, for the purpose of devising improvements in the general practice which should lead to greater accuracy in the assay work. This meeting resulted in the adoption of 15 unanimous recommendations, most of which have been incorporated into the practice of the department, and it is expected that much improvement in the assay work will follow as the result of the meeting.

Later in the year the bureau assayer inaugurated an extensive investigation into the sampling of gold bullion in its relation to the settlement of accounts between purchasing offices and offices of rede-

posits. The results of this investigation are described in a pamphlet entitled "The Sampling of Gold Bullion," which will be supplied to those who may be interested in the subject.

PROCEEDINGS OF THE ASSAY COMMISSION, 1912.

The following-named gentlemen were designated as commissioners to test and examine the weight and fineness of the coins reserved at the several mints during the calendar year 1911 pursuant to the provisions of section 3547 of the Revised Statutes:

Hon. Weldon B. Heyburn, United States Senate; Hon. D. J. Riordan, House of Representatives; Hon. William E. Cox, House of Representatives; Mr. Zina Richey, Yankton, S. Dak.; Dr. Marcus Benjamin, Washington, D. C.; Hon. Warren R. Austin, St. Albans, Vt.; Mr. Edwin S. Church, Akron, Ohio; Dr. Owen Louis Shinn, Philadelphia, Pa.; Dr. John Trowbridge, Cambridge, Mass.; Dr. G. W. Stewart, Iowa City, Iowa; Dr. R. C. Benner, Pittsburgh, Pa.; Hon. Joseph Perrault, Boise, Idaho; Mr. Judson Brenner, De Kalb, Ill.; Col. R. J. Woods, Sioux Falls, S. Dak.; Mr. James H. Manning, Albany, N. Y.; Mr. John D. Walker, Sparta, Ga.; Mr. Charles T. Kountze, Omaha, Nebr.; Mr. H. Dudley Coleman, Waveland, Miss.; Mr. Waldo C. Moore, Lewisburg, Ohio; Mr. L. A. Fischer, Bureau of Standards, Washington, D. C.; Mr. Charles S. McDonald, Sioux Falls, S. Dak.; Hon. Arthur W. Kopp, House of Representatives, Washington, D. C.

The commission met at the mint at Philadelphia on February 14, 1912, and Hon. Daniel J. Riordan was elected chairman.

The following committees were appointed by the chairman with the approval of the commission:

Committee on counting.—Mr. Manning, chairman; Messrs. Church, Walker, McDonald, Perrault, Austin, and Richey.

Committee on weighing.—Dr. Benjamin, chairman; Messrs. Stewart, Kopp, Coleman, and Kountze.

Committee on assaying.—Dr. Shinn, chairman; Messrs. Comings, Benner, Moore, and Brenner.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to them, and that they were compared with the transcripts kept by the Director of the Mint and found to be correct. After verification the coins were delivered to the committees on weighing and assaying.

The coins reserved by the mints for the purposes of the assay commission were as follows:

Institutions.	Gold.		Silver.	
	Pieces.	Value.	Pieces.	Value.
Philadelphia	2,334	$15,465.00	12,010	$1,763.40
Denver	1,009	17,795.00	6,420	851.25
San Francisco:				
United States coin	2,244	23,130.00	2,890	617.50
Philippine Islands coin	.....	.....	986	.....

The committee on assaying reported receiving and making assays of coins reserved from the mints at Philadelphia, San Francisco, and Denver, representing the deliveries made by the coiners to the superintendents during the calendar year 1911.

The highest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	900.6
San Francisco	900.1
Denver	900.1

The lowest assay value of the gold coinage at the different mints (the limit of tolerance being one one-thousandth) is at—

Philadelphia	899.7
San Francisco	899.7
Denver	899.7

The highest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	901.1
San Francisco	901.4
Denver	901.5

The lowest assay value of the silver coinage at the different mints (the limit of tolerance being three one-thousandths) is at—

Philadelphia	898.8
San Francisco	898.8
Denver	898.8

The highest assay value of the Philippine silver coinage is at—

San Francisco (pesos)	800.8
San Francisco (subsidiary)	751.5

The lowest assay value of the Philippine silver coinage is at—

San Francisco (pesos)	799.8
San Francisco (subsidiary)	749.5

The committees also tested the quartation silver and found it free from gold, and the lead used in the assay of the gold bullion and found it free from gold and silver. The acid used in the humid assay of silver was found to be free from silver and also from chlorine.

The balances used were tested and found to be correct.

The committee on weighing reported having received and examined sample coins selected at random from those reserved by the mints at Philadelphia, Denver, and San Francisco, and that in no case did the deviations from the standard weights of the coins examined exceed the limit of tolerance. The working standards of the mint were compared with the standards in the possession of the mint which were certified to by the Bureau of Standards, Test No. 9502, September 15, 1911. The 100, 50, 40, 30, and 20 ounce weights were found to be correct within 1 part in 200,000. The 10-ounce weight was correct to 1 part in 70,000, and the 1-ounce weight was correct to 1 part in 7,500. The other weights were placed in two piles—the 6 and the 4, and the 5, 3, and 2—and compared with the 10-ounce standard. The former pile was found to be correct to within 1 part in 100,000 and the latter to within 1 part in 34,000.

COMMITTEE ON RESOLUTIONS.

Mr. Kopp, chairman, submitted the report of the committee on resolutions, as follows:

Whereas there is now in the mint at Philadelphia a National Coin Collection of great value, the result of years of effort on the part of the mint officials; and

Whereas this collection is yearly visited by thousands of interested visitors and is of great educational and historical value; and

Whereas with a reasonable annual appropriation it would be possible to greatly increase this collection and make it one of the finest in the world; and

Whereas the Government has made and is selling at a reasonable price bronze medals of the Presidents of the United States;

Now, therefore, be it resolved—

First. That the annual assay commission of 1912 hereby renews the recommendations of prior commissions with reference to the maintenance and increase of this National Coin Collection at the mint in Philadelphia.

Second. That in the opinion of the commission, in order to facilitate this work, an official souvenir mint medal of typical and characteristic design should be struck off and a descriptive booklet of the mint published, to be sold at a moderate price to visitors at the mint.

Third. That the proceeds from such sales be devoted exclusively, under the supervision of the Secretary of the Treasury, to the extension of this collection of coins and medals at the Philadelphia Mint as aforesaid. We recommend an annual appropriation of $2,000 for this purpose.

Be it further resolved, That the thanks of the commission be heartily tendered to Hon. George E. Roberts, Director of the Mint, Mr. J. W. Sheetz, and to the various officials and employees of the mint for their uniform courtesies extended during the session.

Respectfully submitted.

A. W. Kopp, *Chairman.*
Judson Brenner.
Waldo C. Moore.

The report of the committee on resolutions was unanimously adopted.

MOVEMENT OF GOLD FROM THE PORT OF NEW YORK.

The superintendent of the United States assay office at New York has prepared the following table giving exports of gold through the port of New York:

Statement of United States gold coin and gold bullion exported from the port of New York to Europe during the fiscal year ended June 30, 1912.

Date.	Country.	Amount.	Rate of exchange.
1911.			
Sept. 29	France	$1,492,507	$4.8645
Oct. 2	do	2,011,238	4.8615
Dec. 30	Netherlands	500	4.8625
1912.			
Feb. 2	France	2,052,669	4.8760
5	do	2,116,291	4.8750
7	do	2,091,657	4.8735
8	do	1,733,070	4.8725
26	Netherlands	500	
Mar. 6	France	2,631,424	4.8725
8	do	1,405,376	4.8720
Apr. 1	Netherlands	500	4.8685
19	Spain	50,000	4.8740
26	Netherlands	500	4.8720
May 20	do	500	4.8710
25	do	500	4.8720
June 17	do	500	4.8735
24	France	2,098,536	4.8735
24	Netherlands	500	4.8735
26	France	1,913,555	4.8720
	Total	19,600,323	

Recapitulation of gold exports to Europe.

Classification.	France.	Spain.	Netherlands.
United States coin		$50,000	$4,000
Bullion	$19,546,323		
Total	19,546,323	50,000	4,000

Grand total of exports to Europe		$19,600,323
During the same period there were shipped to West Indies, Mexico, Central and South America, etc., the following:		
United States coin	$13,690,405	
Foreign coin	2,270,387	
Total exports to other ports		15,960,792
Grand total of gold exports		35,561,115

The imports during the same period were as follows:

From Europe:		
United States coin	$68,814	
Foreign coin	969,021	
Foreign bullion	266,188	
Bullion in ore	5,770	
Total gold imports from Europe		$1,309,793
From other ports (West Indies, Mexico, Central and South America, Cuba, etc.):		
United States coin	$494,767	
Foreign coin	1,545,391	
Foreign bullion	16,618,424	
Bullion in ore	124,029	
Total gold imports from other ports		18,782,611
Grand total of gold imports		20,092,404

NET EXPORTS, UNITED STATES GOLD COIN.

The net exports of United States gold coin since 1870 were as follows:

Imports and exports of United States gold coin since 1870.

Fiscal years.	Imports.	Exports.	Fiscal years.	Imports.	Exports.
Jan. 1 to June 30—			Jan. 1 to June 30—Continued.		
1870	[1]	$12,768,501	1894	$30,790,892	$64,303,840

[1] Of this amount $601 were Hawaiian coins.

NOTE.—The number of standard silver dollars coined to June 30, 1912, was 570,272,610, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 571,419,469. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; and since 1883 the number melted to June 30, 1912, has been 191,308 (see Report of the Director of the Mint, 1912); and the number of Hawaiian dollars melted to June 30, 1912, has been 455,141, a total disposition of 3,141,449, leaving in the United States on June 30, 1912, 568,278,020 standard silver dollars, and 170,588,205 dollars in subsidiary silver coins.

1909	977,321.23	912,300.40	65,020.83
1910	814,361.57	758,695.55	55,666.02
1911	583,538.44	544,539.09	38,999.35
1912	678,457.94	634,101.94	44,356.00
Total	76,714,504.02	72,966,056.50	3,748,447.52

The loss on the recoinage of $3,524,820 in worn and uncurrent gold coins was $28,050.61 and the net loss on the recoinage of $678,457.94 in worn and uncurrent silver coins was $44,356.

The Treasury was reimbursed the following losses for uncurrent coin transferred during the fiscal year 1912 for recoinage from the appropriation for that purpose:

Uncurrent gold coins	$4,848.09
Uncurrent silver coins	44,321.70
Uncurrent minor coins	9,184.49
Total	58,354.28

UNITED STATES GOLD COIN IN CANADA.

The holdings of United States gold coin in the treasury of the Dominion of Canada on December 31, 1911, was $93,507,764.

The holdings of United States gold coin of the charter banks (23 in number) on the same date aggregated $21,330,458.

The total amount of United States gold coin in Canadian reserves on the foregoing date was therefore $114,838,222.

NOTE.—The blank spaces in this table signify that no satisfactory information is available.

[1] Estimates for the United Kingdom prior to that for 1910 were for coin only; these figures include $100,000,000 for bullion in the Bank of England; also $12,200,000 gold belonging to Indian gold-standard reserve.

[2] This is the amount in the currency reserves. Fred. J. Atkinson, accountant general of India, in 1908, estimated the active rupee circulation at 2,040,000,000 rupees; small silver coin at 140,000,000 rupees.

[3] Includes Straits Settlements, the Malay States, and Johore.

[4] This estimate is based upon a calculation made by Messrs. P. Arminjon and B. Michel in 1908, who estimated the stock of gold in the country at from 33,000,000 to 41,000,000 Egyptian pounds. The mean of these figures was adopted in this table last year. Since their estimate was made the net imports of gold into Egypt to Dec. 31, 1911, have amounted to $28,919,061, but as there is said to be a considerable absorption of gold for ornaments, no change in the estimate of the monetary stock has been made.

[5] Estimate of A. De Foville, 1909.

[6] German war fund and Imperial Bank of Germany. No definite information as to other holdings. The coinage of gold since the establishment of the Empire, less recoinage, amounts to $1,125,023,299, but the exports are unknown, and there has been an industrial consumption.

[7] Gold conversion value.

[8] This amount has been reduced to a gold basis; that is, 100 pesos equal 1 United States gold dollar.

[9] Except Costa Rica and British Honduras (gold-standard countries).

per capita, in the principal countries of the world, Dec. 31, 1911.

MONETARY STOCKS OF GOLD.

The foregoing table is by no means complete or satisfactory, but all of the figures given have some reputable authority behind them, and in most cases are from official sources. No official information was received from Germany last year, but the figures for the Imperial Bank are from its published statements. No authoritative estimate has been made for a number of years of the stock of gold in Germany outside of the Imperial Bank and the war fund. The coinage of imperial gold since the first act authorizing coinage under the Empire in 1871 to the close of 1910, less recoinage, amounted to 4,726,988,650 marks, or approximately $1,125,000,000, but there has been a considerable reduction at the hands of manufacturing jewelers and of course considerable exportation. It is to be said, however, of exportation that ordinarily coins passing from one European country to another are not melted, but held in the reserves of the banks of issue until fluctuations of exchange return them to the country of origin. There is good reason for this in the fact that melting would always involve a loss, while the coins may be returned at their face value.

In 1887 Mr. Edward Atkinson, of Boston, having been appointed by the President of the United States to make an inquiry into monetary conditions abroad, made a report in which he stated that the net gold coinage under the Empire to the close of 1885 had amounted to 1,928,890,830 marks, and that competent authorities estimated that of this 1,550,000,000 marks, or about $369,000,000 remained in the country. As the net coinage to the end of 1910 is about two and one-half times the coinage to the end of 1885, it would appear that the total stock of German gold coin remaining in the country at the close of 1910 might be reasonably estimated at not less than $800,000,000.

The changes in the table of gold holdings of the principal institutions of issue, including for the United States the Treasury and national banks, from the table of last year are as given below:

Gold in institutions of issue.

Country.	Gain.	Loss.	Country.	Gain.	Loss.
United States	$98,500,000		Roumania	$10,900,000	
Austria-Hungary		$5,900.000	Russia		$22,400,000
Belgium	12,200,000		Servia	1,400,000	
Australia	23,300,000		Argentina	3,900,000	
Canada	30,000,000		Bolivia	5,300,000	
Great Britain	60,800,000		Brazil	18,000,000	
India	31,400,000		Ecuador	900,000	
Straits Settlements	4,600,000		Guiana—Dutch	100,000	
Bulgaria	1,600,000		Paraguay	14,900,000	
Denmark	100,000		Uruguay		300,000
Egypt		100,000	Venezuela	200,000	
Finland	2,700,000		Spain		31,900,000
France	2,100,000		Sweden	1,200,000	
Germany	19,800,000		Switzerland	1,000,000	
Greece		17,200,000	Turkey		600,000
Italy	24,400,000		Central American States		200,000
Japan	6,200,000				
Mexico	2,600,000		Total	391,300,000	80,700,000
Netherlands	6,200,000			80,700,000	
Norway	7,000,000				
Portugal		2,100,000	Net gain	310,600,000	

THE MOVEMENT TO INDIA.

The persistent absorption of gold by India which began to occasion comment in the early part of 1911 has become decidedly the largest

factor in the question of future banking reserves. The annual production in the world has increased since 1908 from approximately $442,500,000 in that year to perhaps $470,000,000 in 1912, or somewhat less than $30,000,000. The economists of the world have been busy tracing the effects of these increasing supplies upon prices and forecasting the influence of future supplies. Meanwhile the net imports of gold by India have risen from $56,346,699 during the British fiscal year ended March 30, 1908, to $134,409,087 during the fiscal year ended March 30, 1912. For five years they have been as follows:

1907–8	$56,346,699	1910–11	$90,270,816
1908–9	14,130,583	1911–12	134,409,087
1909–10	81,017,584		

At this writing it seems probable that the imports of 1912–13 will equal and possibly exceed those of the preceding year.

The ability of India to take this amount of gold is explained by its increasing favorable balance in the international trade, as appears by the following statement of the net merchandise movement the last five years:

1907–8	$132,846,889	1910–11	$248,068,313
1908–9	79,048,235	1911–12	272,305,961
1909–10	211,919,211		

The figures given elsewhere for the movement of gold and silver to India in past years show that the importations of silver are not declining but that the increasing balances due that country have been taken of late in gold. This absorption of gold, amounting last year to approximately 29 per cent of the world's output, must be regarded as of great importance, because the history of India shows that that country seldom gives up any of the precious metals which enter into its possession. Its holdings of gold and silver steadily increase and to a great extent the additions to its stock are retired from monetary use and from the world's available supply.

The Government of India last year instituted a formal inquiry directed to all its treasury offices asking for information concerning the use of gold in current trade. All replies agreed that its use was increasing, but there is no indication of hoarding in any other sense than that the mass of the people prefer to use coin rather than paper money and have made but little progress in the use of banks or credit instruments. Two of the provincial reports will serve as examples of them all, and they are here given:

Ambala.—"Gold is now very largely in demand not only by banks, firms, and contractors, but also by the public in general. Indian firms in this district make very large demands for gold in payment of bills, checks, etc., and also in exchange for notes, and from inquiries I have made, it appears that their demands are to supply the wants of the general public and not for any particular purpose. The use of gold among all classes may now be considered general. The agent of the Agricultural Bank takes large quantities of gold for the use of the agricultural community. Land revenue payments include very fair amount of sovereigns; the post-office payments into the treasury include a large number of sovereigns."

Shahpur.—"About three-fifths of the gold issued from the treasury is actually in circulation as currency. The receipts come in chiefly with the land revenue both at Tahsil and Sadar treasuries and also with payments for the purchase of proprietary rights. Excise and

opium contractors make payments in gold and stamp. Municipal and post-office receipts contain gold to some extent; generally speaking, gold forms part of all the payments that are made at the treasury. Gold is demanded by the people in payments of every sort and is issued freely from the treasury if in stock. Gold is issued in exchange for notes and rupees, but there are very few instances in which gold has been received and silver or notes issued in exchange. Crops are paid for partly in gold; out of the gold thus paid a portion of it is tendered in the bazaars when some domestic necessities arise and the balance (if any) after payments of government dues, is hoarded."

PRODUCTION AND DISTRIBUTION.

The production of gold has been steadily increasing since about 1890, and during the last 10 years the reserves of the principal banking institutions of the world have been largely augmented by the new supplies. The United States has been particularly successful in securing and holding a large share of this new gold, the gains of the Treasury and national banks from January 1, 1900, to January 1, 1912, aggregating $825,705,052 and representing an increase of over 100 per cent.

The volume of trade and of bank credits, of private, corporate, and public indebtedness, and the general level of prices have all been affected to some degree no doubt by this enlargement of bank reserves and the stimulus thereby imparted to enterprise and industry. It is an interesting question whether the gold supplies of the next 10 or 20 years will be sufficient to allow of further additions to banking reserves, corresponding to those of the past and to the natural expansion of trade and industry.

The effect of the new supplies will depend not alone upon their actual amount but upon their relative amount as compared with the existing stock. On December 31, 1899, the gold holdings of the principal banks of issue of Europe, Australasia, South Africa, and Canada, including the United States Treasury, were $2,367,201,422 (see report of this bureau for 1911, p. 58), and on December 31, 1911, these institutions held approximately $4,570,000,000, an increase of about $2,200,000,000, or nearly 100 per cent in 12 years. But it is apparent that there will have to be a much larger actual gain in the future to make the same percentage of gain.

The importations of India last year plus the world's industrial consumption equaled fully one-half of the world's production, leaving perhaps $210,000,000 or $220,000,000 for monetary use. At that rate bank reserves would scarcely gain more than 50 per cent in the next 10 years.

It can not be safely predicted on the strength of present conditions in the principal gold fields of the world that the production of gold will materially increase in the next 10 years.

On the other hand, it must be recognized that the increase in gold supplies during the last 20 years has been at an abnormally high rate, and it is not probable that any harmful results will come from a slowing down in the rate of accumulation. The fact that bank credits have kept pace with bank reserves and even shown a tendency to overrun them, does not prove an insufficient supply of money. Never in the history of the world was the supply of money equal to the demand, excepting in periods of temporary depression and reaction,

when the business community was controlled by a spirit of caution instead of the normal spirit of enterprise. The opportunities for profit in exploiting the latent resources of the world, in developing the multitude of new inventions and new ideas that are forever coming forward, create a practically unlimited demand for capital. These opportunities constantly bid against each other in the investment market, invite the use of credit, and will absorb any amount of money. The effect of increasing supplies of gold is to stimulate the demand for labor and commodities until wages and prices are forced to higher levels and the equilibrium thus restored.

UNITED STATES GOLD COIN IMPORTED AND MELTED BY VARIOUS COUNTRIES DURING THE CALENDAR YEAR 1911.

The following table shows the amount of United States gold coin imported by various countries and the value of the United States gold coin melted at their mints:

Countries.	Import of United States gold coin.	United States gold coin melted.
Austria-Hungary	$160,000	$160,000
Australia	1,000	.....
Brazil	250,575	.....
Canada	22,097,630	7,120
Finland	82,000	82,000
Great Britain	.....	19,958,355
Japan	10	.....
Turkey	290	290
Total	22,591,505	20,207,765

The amount of gold and silver in the form of old plate, jewelry, and other old material returned from use in the industrial arts to monetary use by being deposited at the mint for coinage during the calendar year 1911 is shown in the following table:

Countries.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
United States	454,480	2,116,671
Australia	6,305	.....
Austria-Hungary	878	5,218
Canada	927	253
Finland	81	.....
Total	462,671	2,122,142

VALUES OF FOREIGN COINS.

The following values calculated by the Director of the Mint were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1912:

Values of foreign coins.

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.[1]
Argentine Republic	Gold	Peso	$0.965	Currency: Depreciated paper, convertible at 44 per cent of face value.
Austria-Hungary	do	Crown	.203	
Belgium	Gold and silver.	Franc	.193	Member of Latin Union; gold is the actual standard.
Bolivia	Gold	Boliviano	.389	12½ bolivianos equal 1 pound sterling.
Brazil	do	Milreis	.546	Currency: Government paper, convertible at $0.3244 to the milreis.
British Colonies in Australasia and Africa.	do	Pound sterling	4.8665	
Canada	do	Dollar	1.000	
Central American States:				
Costa Rica	do	Colon	.465	
British Honduras	do	Dollar	1.000	
Guatemala, Honduras, Nicaragua, Salvador	Silver	Peso	.451	Guatemala: Currency, inconvertible paper, exchange rate 16 to 18 pesos=$1. Honduras: Currency, bank notes, exchange rate March 20, 1912, $0.415. Nicaragua: Currency, inconvertible paper, exchange rate 16¾ to 17 pesos=$1. Salvador: Currency, convertible into silver on demand.
Chile	Gold	do	.365	Currency: Inconvertible paper; exchange rate, approximately, $0.2230.
China	Silver	Tael—Amoy	.740	
		Tael—Canton	.738	
		Tael—Cheefoo	.708	
		Tael—Chin Kiang	.723	
		Tael—Fuchau	.685	
		Tael—Haikwan (customs).	.753	
		Tael—Hankow	.692	
		Tael—Kiaochow	.717	
		Tael—Nankin	.732	
		Tael—Niuchwang	.694	
		Tael—Ningpo	.712	
		Tael—Peking	.721	
		Tael—Shanghai	.676	
		Tael—Swatow	.684	
		Tael—Takau	.745	
		Tael—Tientsin	.717	
		Dollar—Yuan	.539	
		Dollar—Hongkong	.487	
		Dollar—British	.487	
		Dollar—Mexican	.490	
Colombia	Gold	Dollar	1.000	Currency: Inconvertible paper; exchange rate, approximately, $102 paper to $1 gold.
Denmark	do	Crown	.268	
Ecuador	do	Sucre	.487	
Egypt	do	Pound (100 piasters)	4.943	The actual standard is the British pound sterling, which is legal tender for 97½ piasters.
Finland	do	Mark	.193	
France	Gold and silver.	Franc	.193	Member of Latin Union; gold is the actual standard.
German Empire	Gold	Mark	.238	
Great Britain	do	Pound sterling	4.8665	
Greece	Gold and silver.	Drachma	.193	Member of Latin Union; gold is the actual standard.

[1] The exchange rates shown under this heading are recent quotations and given as an indication of the values of currencies which are fluctuating in their relation to the legal standard. They are not to take the place of the consular certificate where it is available.

Values of foreign coins—Continued.

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.
Haiti	Gold	Gourde	$0.965	Currency: Inconvertible paper; exchange rate, approximately, $0.2941.
India (British)	do	Rupee	.32441/3	15 rupees equal 1 pound sterling.
Italy	Gold and silver.	Lira	.193	Member of Latin Union; gold is the actual standard.
Japan	Gold	Yen	.498	
Liberia	do	Dollar	1.000	Currency: Depreciated silver token coins. Customs duties are collected in gold.
Mexico	do	Peso	.498

MONETARY LEGISLATION.

Public, No. 299.
[H. R. 26371.]

Chapter 350.—An Act Making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June thirtieth, nineteen hundred and thirteen, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and the same are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, in full compensation for the service of the fiscal year ending June thirtieth, nineteen hundred and thirteen, for the objects hereinafter expressed, namely:

LEGISLATIVE.

* * * * * * *

TREASURY DEPARTMENT.

* * * * * * *

MINTS AND ASSAY OFFICES.

* * * * * * *

Coiner, melter, and refiner.
Positions abolished. R. S., secs. 3496–3498, 3501, 3504, 3508, 3509, 3530, 3534, 3538–3542, 3550, 3551, 3554, 3556, pp. 694–696, 699–702. Amended.
Employees to be appointed by Secretary.

The position of coiner, which has heretofore existed in each of the coinage mints, and the position of melter and refiner, which has heretofore existed in each of the coinage mints and in the United States assay office at New York, are hereby abolished, to take effect on and after July first, nineteen hundred and twelve, and on and after that date the duties and responsibilities heretofore imposed by law on the officers holding said positions in each of said mints and the assay office shall devolve upon the superintendents of said institutions; and all assistants and employees of the mints and assay offices of the United States shall, from and after July first, nineteen hundred and twelve, be appointed by the Secretary of the Treasury.

* * * * * * *

SEC. 9. That until otherwise provided by law, the regular annual estimates of appropriations for expenses of the Government of the United States shall be prepared and submitted to Congress, by those charged with the duty of such preparation and submission, only in the form and at the time now required by law, and in no other form and at no other time.

SEC. 10. That all laws or parts of laws inconsistent with this Act are repealed.

Approved, August 23, 1912.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1912, is respectfully submitted.

GEO. E. ROBERTS,
Director of the Mint.

Hon. FRANKLIN MACVEAGH,
Secretary of the Treasury.

MONETARY STATISTICS OF FOREIGN COUNTRIES.

The statistics of the production and coinage of the precious metals, imports and exports of gold and silver, amount of bank and Government notes, both covered and uncovered, of the different foreign countries, published annually in the reports of this bureau, are obtained directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of the interrogatories covering the points on which information is sought from the Governments of foreign countries is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Following is a copy of the list of the interrogatories forwarded to foreign Governments for the year 1911:

1. What was the amount of gold and silver coinage during the calendar year 1911; new coinage, and domestic and foreign recoinage?

2. (*a*) Was any coinage executed at your mint for other Governments during the year 1911? If so, state character and amount of same.

2. (*b*) Was any coinage executed at foreign mints for your Government? If so, state character and amount of same.

3. What as the estimated weight of fine gold and silver used in the industrial arts during the calendar year 1911?

3½. What amount of gold and silver in the form of old plate, jewelry, and other old material, was returned from use in the industrial arts to monetary use by being deposited at the mint for coinage?

4. What was the total import of United States gold coin and what amount was deposited and melted at the mints during the year 1911?

5. What was the weight, expressed in kilograms fine, and the value of the gold and silver produced from the mines of the country during the calendar year 1911? Give the product of the colonies of the country, naming them separately.

6. What, approximately, was the stock of gold and silver coin and bullion in the country on December 31, 1911? Give stock in public treasuries and banks, and in circulation, separately.

7. What was the amount of Government and bank notes outstanding at the end of the year 1911, and what amount was not covered by gold coin and bullion and legal-tender silver coin held for their redemption?

8. Is gold at a premium as compared with the actual currency of the country? If so, what is the actual currency?

9. Were any laws passed during the year 1911 affecting the coinage, currency, or banking? If so, please forward copies of the same.

10. Is there a report published on the operations of the mint? If so, please forward a copy, also a report of the Department of Mines.

11. (*a*) What was the import and export of gold during the calendar year 1911, the value of coin, bullion, and ore, to be given separately and by countries.

11. (*b*) What was the import and export of silver during the calendar year 1911, the value of coin, bullion, and ore to be given separately and by countries.

12. Please examine the appended description of the coins of your country, bringing it down to date with corrections.

NORTH AMERICA.

CANADA.

Answers to interrogatories, 1911.

1. Amount of gold and silver coined during the calendar year 1911:

Coinage.	Pieces.	Value.
Gold:		
Sovereigns	256,946	£253,539.00
Recoinage—		
Domestic	.....	[1] 1,961.00
Foreign [2]	.....	[1] 1,446.00

France		1,023
Great Britain		10,067
Total		6,766,644

COSTA RICA.

1 and 2 (*a* and *b*). No gold or silver was coined in Costa Rica, or anywhere else for Costa Rica, during the calendar year 1911. Costa Rica has no mint.

4. None.

5. Amount of United States gold coin imported during 1911: $2,469 (United States currency). Melted at mints: None.

7. Stock of gold and silver on December 31, 1911:

Character.	In public treasuries.	In banks.	In circulation.
Gold coin		$1,247,813	
Silver coin	$348,750		$244,125
Total	348,750	1,247,813	244,125

NOTE.—No gold or silver bullion on deposit. Practically no gold coin in circulation. The sum of $1,247,813 in gold coin on deposit in four banks of issue to secure their total outstanding notes in sum of $1,905,182 at end of 1911, which are payable in gold coin.

8. Notes outstanding on December 31, 1911:

Items.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	$348,750		$348,750
Banks of issue	1,905,182	$1,247,813	
Total	2,253,932	1,247,813	348,750

Amount of Government and bank notes outstanding	$2,253,932
Amount covered by gold and silver coin	1,596,563
Amount not covered by gold and silver coin	657,369

Banks must keep at least 50 per cent of their circulation in gold reserve; at end of 1911 they had 65.5 per cent in reserve.

9. Gold is at par. The colon is the actual currency and gold payments are maintained.

Items.	Premium for exchange (1911)	New York exchange.
		Colones.
Highest premium	$1.00 U. S.	2.2087
Lowest premium	1.00 U. S.	2.1753
Average premium	1.00 U. S.	2.1921

Colon at legal rate=46½ cents United States currency; or $1 United States=2.15 colones.

10. No.

* * * * * * *

12 (*a*). *Gold imports.*—During 1911 no gold bullion or ore was imported. United States gold coin was imported as follows:

	United States currency.
From the United States	$979.75
From Panama	1,489.28
Total	2,489.03

No other imports of gold coin are reported.

Gold exports.—The statistical office reports that it has not received any documents showing exportation of either gold or silver coin during the year 1911. No ore of any sort was exported during 1911. Gold and silver bullion was exported to the total of $1,190,406 United States currency. (See also answer to interrogatory No. 6.)

12 (*b*). *Silver imports.*—There was no silver bullion or ore imported during 1911. Silver coin in the sum of $6,973 was imported from the United States during 1911.

Silver exports.—Please refer to interrogatory No. 6 for silver exports. No silver ore exported. No exports of silver coin reported for 1911.

GUATEMALA.

1, 2 (*a*), and 4. None.

2 (*b*). Coinage executed at foreign mints during 1911: Nickel, coined by John Hexton, Birmingham, England. Amount unknown.

5. No customs statistics yet published.

7. Stock of gold and silver on December 31, 1911:

Character.	In public treasuries.	In banks.
Gold coin	.....	$24,501.27
Gold bullion	.....	.....
Silver coin	.....	237,534.61
Silver bullion	.....	.....
Total	.....	262,035.88

In circulation: No data.

8. Government and bank notes outstanding at the end of the year 1911:

Items.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Government	$6,000,000.00	.....	.....
Banks of issue	85,051,355.25	$24,501.27	$237,534.61
Total	91,051,355.25	24,501.27	237,534.61

9. Premium on gold during 1911: As compared with the United States gold dollar, which is the standard of value in Guatemala:

	Per cent.
Highest premium	1,801
Lowest premium	1,524
Average premium	1,677¾

The actual currency is inconvertible paper.

10 and'11. No.

12 (*a*). Gold: The United Fruit Co. imports irregularly gold and United States currency for paying labor; the amount of this is not known. Silver: No data; probably little or none.

HONDURAS.

1, 2, 3, 4, and 5. None.

7. Stock of silver on December 31, 1911:

Character.	In public treasuries.	In banks.	In circulation (about).
	Pesos.	*Pesos.*	*Pesos.*
Silver coin	[1] 125,634.87	[2] 359,729.19	2,500,000

[1] The amount of silver coin in public treasury (125,634.87 pesos) is equal to $50,253.95 in United States currency at 250 per cent exchange.
[2] Equal to $141,070.27 at 155 per cent exchange.

8. Stock of notes, December 31, 1911: Notes outstanding, banks of issue, 282,721 pesos, equal to $110,870.98, at 155 per cent.

Legal-tender silver holdings: The bank must have 40 per cent according to law.

9. Premium on gold during 1911:

	Per cent.
Highest premium	170
Lowest premium	140
Average premium	155

The actual currency of the country is silver.

10 and 11. None.

12 (*a*). Imports and exports of gold during the calendar year 1911:

Country.	Exports.[1]
Gold bullion:	
United States	$2,820
Germany	14,244
England	800
France	400
Total	18,264
Export of gold and silver bullion not separated:	
United States	620
England	3,525
Germany	1,010
Total	5,155

[1] Expressed in United States currency. Exports are changed from Honduran currency at rate of 250 per cent, which the Government office will use in changing these values to gold.

12 (*b*). Imports and exports of silver during the calendar year 1911:

Country.	Imports.	Exports.
Silver coin:		
United States	$60,000	$78,000
Nicaragua	1,120	.....
Belize	1,755	.....
Total	62,875	78,000
Silver bullion:		
United States	.....	2,220
Germany	.....	604
England	.....	3,825
Total	.....	6,649
Silver ore:		
United States	.....	650
Germany	.....	2,907
Total	.....	3,557

NOTE.—The imports are given by the offices of statistics in United States currency. The exports, as given above, are also in United States currency, at 250 per cent.

PANAMA.

1. No coinage made since 1905.

2 (*a*). The Government has no mint.

2 (*b*). All Panama coinage was executed at the United States Government mint at Philadelphia. None made since 1905.

3 and 4. None.

5. Not known.

7. It is impossible to ascertain the stock of gold and silver coin and bullion in the country on December 31, 1911. No one knows the actual amount in the country, it varying largely from time to time, and the amount in the banks at the end of the year would indicate nothing. Considerable amounts accumulate during a month, but are withdrawn from the 25th to the 28th of each month by the disbursing officer of the Isthmian Canal Commission and the Panaman Government to pay their respective employees, and from $1,000,000 to $2,000,000 circulates in this way.

From December to June large sums of American gold and bills are brought into the country by American tourists and this is increasing yearly. During a recent month the net profit of the Hotel Tivoli alone was $14,000, all cash and in American bills and gold, and practically all brought in by tourists

The original amount of silver coined for the Panaman Government at the Philadelphia Mint was $3,000,000, which represents the entire coinage of the republic, and this is all supposed to be in circulation in the country.

None of the banks have any bullion on hand, and inquiry at the national bank for a statement of coin on hand is generally answered by showing various classes of securities and little actual coin.

One interesting item here is the amount of buried gold in the country, and the manager of one bank tells me they have a special place for washing and cleaning gold which has been buried at times for long periods and dug up at changing intervals for various purposes, and that no one really knows the amount so buried.

The banks state that their supply of coin, etc., on December 31, 1911, would be of little or no service, representing a time so shortly following a general pay day on the Isthmus.

8. None.

9. Panama is on a gold basis; the Balboa equals $1 United States gold, but does not exist. Silver coins only are in circulation, worth 50 cents on the dollar United States currency. All United States coins, and all gold has legal currency.

* * * * * * *

12. (*a*). Exports of gold during 1911:

Classification and country.	Value.
Gold bullion:	
United States	$1,252
Great Britain	80,281
Total	81,533

NOTE.—The only statistics which the Government has on imports and exports of gold and silver bullion are contained in my reply to No. 6, and in view of the fact that there is only one small mine working in the country this is probably correct.

SALVADOR.

2 (*b*). Coinage executed at foreign mints:

Coinage.	Value.	Value in United States currency.
	Pesos.	
Silver, colones or pesos	[1] 1,511,000	$604,097.80

[1] 1,011,000 made in United States; 500,000 made in England.

4, 10, and 11. None.

5. Amount of United States gold coin imported during 1911, $60,000.

7. Stock of gold and silver on December 31, 1911:

Character.	In banks.	In circulation.
	Pesos.	*Pesos.*
Gold coin	[1] 10,000	[1] 90,000
Silver coin	[1] 4,500,000	[1] 2,000,000
Total	4,510,000	2,090,000

[1] Salvador pesos.

8. Bank notes outstanding on December 31, 1911:

	Pesos.
Legal-tender silver holdings (banks of issue)	[1] 5,500,000

9. Premium on gold during 1911:

	Per cent.
Highest premium	154
Lowest premium	144
Average premium	147

The actual currency of the country is silver and bank notes.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1911:

Classification and country.	Imports.	Exports.
	Pesos.	*Pesos.*
Gold coin:		
United States	60,000	.....
England	5,000	.....
Spanish America	2,000	.....
France	1,000	.....

CUBA.

* * * * * * *

7. No statistics available, as Government and banks do not make reports. It is estimated, however, that the value of the gold and silver coin in Cuba at the end of 1911 was $30,000,000; this includes all American, French, and Spanish gold and silver coin. No bullion traceable.

8. None. Cuba has no national currency, United States currency being the official money.

9. There is no premium on gold. The actual currency is United States values.

12 (*a*). It is stated that the total import of gold during 1911 was $1,000,000, this being in French coinage. There was no export. The introduction of American gold to Cuba was brought about under the first loan, and by reason of the Army pay, during the occupation and intervention. Since then importation and exportation of gold has been limited, owing to the expense of transportation in comparison with American paper money. The Cuban customs statistics do not separate the coinage values in importation or exportation, the designation being simply as money.

12 (*b*). The importation of silver in 1911 is stated at $600,000, all in Spanish pesos and fractional currency. The value of bullion can not be traced, but was very small. No exports recorded.

[1] 1,000,000 pesos in bank notes were not covered by legal-tender silver coin.

SANTO DOMINGO.

* * * * * * *

7. Stock of silver on December 31, 1911:

Silver coin in circulation	[1] $600,000

Estimate of American gold and silver not obtainable; American currency mostly paper.

8. Notes outstanding on December 31, 1911:

Government and banks of issue	[2] $1,500,000

9. American gold is the standard currency.

12 (*a* and *b*). Imports of gold and silver during the calendar year 1911:

Classification.	Country.	Imports.
Gold coin	United States	$18,000
Silver coin	do	89,000

The above figures for the importation of gold and silver include only such quantities as were manifested. There were undoubtedly large quantities brought in without manifests, by private parties.

No separate figures are given for the exports in gold and silver. The total exports of currency of all kinds were $9,360, as per manifests rendered.

HAITI.

1, 2, 3, and 4. None.

5. United States gold coin imported during 1911: $745,000 (Port au Prince only).

7. In circulation during 1911: United States gold coin, $2,100,000; Haitien nickel coin, 7,000,000 gourdes.

8. Government notes outstanding at the end of the year 1911: 7,893,772 gourdes.

NOTE.—"I have obtained the foregoing financial information from Mr. John H. Allen, director of the National Bank of the Republic of Haiti. American capitalists have the controlling interest in this bank. The figures given are no doubt correct. He also informs me that nearly all of the American gold imported came to Port au Prince and was distributed to the coast towns."

9. United States gold, 240 per cent premium.

Premium of United States gold against gourdes during 1911:

	Per cent.
Highest	450.83
Lowest	240.00
Average	345.29

10. "Mr. Allen also informs me that there were no laws passed during the year 1911 affecting the coinage, currency, or banking."

SOUTH AMERICA.

ARGENTINA.

1, 2 (*a* and *b*), 4, 9, and 10. None.

5. United States gold coin was imported during 1911 to the value of $1,200,000 Argentine gold.

7. Stock of gold and silver on December 31, 1911:

Character.	In conversion treasury.	In banks.
	Pesos.	
Argentine gold	189,048,628.62	$59,294,162

Impossible to estimate amount in circulation; no control taken by Government or banks.

[1] Dominican currency (estimated).

[2] American paper (estimated).

8. Government and bank notes outstanding at the end of the year 1911:

Government	[1] $429,655,955.08
Banks of issue	[2] 293,268,255.44
Total	722,924,210.52

11. Mint and mine report will be sent as soon as published.

12 (*a* and *b*). Imports and exports of gold and silver during the calendar year 1911.[3]

GOLD.

Country.	Imports.	Exports.
Germany	$522,000	.....

3 and 5. Unknown.

7. Stock of gold and silver in banks on December 31, 1911:

Gold coin	£1,594,093
Silver coin	$1,700,498

NOTE.—Amounts in public treasury and in circulation, unknown.

8. Bank notes outstanding at the end of the year 1911, $24,868,850.

9. Premium on gold during 1911, 18¾ pence for 1 Bolivian dollar.

* * * * * * *

11. No mint report. Work at the mint is at a standstill and only medals are now and then struck.

BRAZIL.

1. Amount of gold and silver coined during the calendar year 1911:

Denomination.	Pieces.	Value.
GOLD.		
New coinage:		*Reis.*
20 milreis	8,467	.....
10 milreis	137	.....
Total	8,604	170,710,000
SILVER.		
2 milreis	1,929,000	.....
1 milreis	2,811,000	.....
500 reis	8,000	.....
Total	4,748,000	6,673,000,000

No recoinage was executed.

2 (*a* and *b*), 4 and 11. None.

5. United States gold coin imported during 1911, $250,575.

6. Gold and silver produced from mines during 1911. No data received.

[1] Guaranteed with $189,048,628.62 Argentine gold, in accordance with law No. 3871.

[2] Issue of the British Bank of South America with $250,000 in public funds for gold of 4½ per cent according to law No. 2216 ..... Argentine pesos. 250,000.00

Bank of the Argentine Nation a fund of $30,000,000 Argentine gold 293,018,258.44

Total 293,268,258.44

[3] Amounts in Argentine gold. Statistics not classified as to coin, bullion, and ore.

7. There are no figures obtainable as to amount of gold and silver coin and bullion in the banks or in circulation. The gold coin deposits in the "Caixa de Conversão" (conversion treasury) on December 31, 1911, were as follows:

Pounds sterling	14,043,812
Francs	62,172,940
Marks	36,390,560
Dollars	27,087,775
Lire	690
Austrian crowns	8,600
Argentine pesos	132,850
Spanish pesetas	723,470
Reis (national gold)	281,210,005

The total value of the deposits equals £23,943,059, or, in national currency at exchange of 16d., 359,145,886,695 reis. As the output was 378,483,010,000 reis, a difference of 19,337,114,000, which is due to the changing of the exchange rate from 15d. to 16d., was assumed by the national treasury.

This department ("Caixa de Conversão"), having suspended the taking in of metal specie, as well as the output corresponding, after the limit of £20,000,000 had been attained; resumed operations again on January 23, 1911, in accordance with the annexed decree.

8. The amount of inconvertible gold Government notes in circulation on December 31, 1911, was 612,519,626,000 reis and convertible gold notes, at 16 d., 372,483,010,000 reis. There are no bank notes in Brazil.

9. Premium on gold during 1911:

	Per cent.
Highest	1.687
Lowest	1.687
Average	1.687

Gold milreis equivalent, on December 31, 1911, to 1.687 paper milreis.

The actual currency of the country is paper of the convertible and inconvertible character above represented.

10. Law of December 30, 1910, as follows:

DECREE

No. 8512, of January 11, 1911, which states that from the 23d instant law No. 2357, of the 31st of December, 1910, which fixes the rate of exchange at 16d. per 1 milreis, shall take effect in the operations of the "Caixa de Conversão."

The President of the Republic of the United States of Brazil hereby resolves that from the 23d of the current month the law, No. 2357, of the 31st of December, 1910, which fixes the rate of exchange at 16d. per 1 milreis, shall take effect on the transactions of the "Caixa de Conversão" in calculating values deposited or admitted; furthermore, that provisionally the notes now deposited and which served in former emission of the "Caixa" be utilized, their value, in accordance with the same law, being secured to the limit of their face value at the rate of 16d. per 1 milreis both in emissions and changing, the value of the coins to be adjusted in relation to the pound sterling, according to the table organized by the law of the 6th of December, 1906, No. 1575, article No. 5.

Rio de Janeiro, January 11, 1911, the ninetieth year of independence and the twenty-third year of the Republic.

HERMES R. DA FONSECA.
FRANCISCO ANTONIO DO SALLES.

COLOMBIA RESUMES COINAGE OF GOLD.

[From Daily Consular and Trade Reports, Aug. 27, 1912.]

Consul Isaac A. Manning reports from Barranquilla that the Colombian Government has ordered the reopening of the Government mint at Medellin for the coinage of gold. It is presumed this will materially affect the export of gold dust and bars from Colombia.

ECUADOR.

1, 2 (*a* and *b*), 4, 5, and 10. None.

7. Stock of gold and silver in banks on December 31, 1911:

Gold coin	$3,271,796
Silver coin	31,900
Total	3,303,696

There are no public treasuries. It is impossible to obtain any information re amount in circulation.

8. Bank notes outstanding at the end of the year 1911:

Item.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
Banks of issue	$5,019,934	$3,271,796	$31,900

There are no Government notes.

9. Premium on gold during 1911, 105½ per cent. The actual currency of the country is gold, silver, and bank notes.

11. There is no mint. No report was published by the Department of Mines.

12 (*a*). Exports of gold during the calendar year 1911:

United States:	
Gold bullion	$168,075
Gold ore	779

Imports and exports of silver are not obtainable.

BRITISH GUIANA.

1. None.

2 (*a*). None.

2 (*b*). Coins valued at 4 pence, or 8 cents, and bearing the words "British Guiana and West Indies," are minted in England, but no statistics are kept here regarding the quantity placed in circulation.

3. No data whatever are available, and the only estimate I could secure from a local jeweler places the gross value at about $6,000.

4 and 5. None.

PARAGUAY.

1 and 2 (*a* and *b*). No gold or silver has been coined in Paraguay in 1911. There is neither gold nor silver money of Paraguay.

7. There are no statistics. The only means of such information would be to inquire of all the banks and money changers, but as the custom of hoarding gold by individuals prevails, such inquiries would not cover the amount of gold held in the country.

8. Government notes outstanding at the end of the year 1911: 32,500,000 pesos.

9. Premium on gold during 1911:

	Per cent.
Highest	1,400
Lowest	1,080
Average	1,209

The rate of exchange for Argentina gold is subject to daily fluctuations, ranging from 1,080 to 1,750 per cent within the past 18 months. At present (May 13, 1912), it is 1,550 per cent, which means that it takes $15.50 in Paraguayan paper to buy one Argentina gold peso. The Argentina gold peso being equivalent to $0.965 in United States currency, makes one Paraguayan paper peso to-day worth 6.2 cents in United States gold. The actual currency is paper.

11. There is neither a mint nor department of mines.

12 (*a*). No gold is imported or exported. None is in circulation except such as passes over the counters of banks.

12 (*b*). No silver is imported or exported. There are no silver coins of Paraguay in circulation; they are to be found in the hands of money changers who sell them as curiosities.

URUGUAY.

1, 2, and 11. No coinage. No mint.

3 and 4. None.

5. Not stated.

7. Stock of gold and silver coin in banks on December 31, 1911:

Gold coin	$14,667,855.53
Silver coin	1,495,593.71

8. Bank notes outstanding at the end of the year 1911:

Banks of issue	$26,872,351.55

9. No.

10. Laws passed during 1911: Law of July 17, 1911, reforming the charter of the Bank of the Republic, increasing its capital, converting it into a purely State institution, and augmenting its powers of note issue.

12 (*a* and *b*). Imports and exports of gold and silver are not published.

1 and 2 (*a*). No new coinage during 1911 of any character. No mint in Uruguay.

2 (*b*). Last batch was in 1905. The contractors were Aron Hirsh & Sohn, Germany, and the coinage was nickel.

4. No mint in Uruguay.

5. No statements are available as to the gold imported from the United States except very indirectly.

7. Very difficult to furnish any information on the subject of the stock of gold and silver coin in the country, for the reason that the banks are not required to publish and do not publish their balances. It will be remembered, in the case of gold coin, that Uruguay has no distinctive coin, but that the coins of all other nations circulate freely at a definite legal value laid down by the State. On December 31, 1911, the existences were as follows:

Items.	Holdings.			
	Gold.	Silver.	Nickel.	Total.
Central Bank	$13,462,093.68	$1,393,807.11	$213,443.59	$15,069,344.38
Branches	1,205,761.85	101,786.60	12,075.39	1,319,623.84
Total	14,667,855.53	1,495,593.71	225,518.98	16,388,968.22

8. The only paper money issued in Uruguay is that of the Bank of the Republic, which, while generally accepted everywhere, has no legal-tender quality. All other banks of issue have been terminated.

	Pesos.
Notes outstanding Dec. 31, 1911 (Bank of the Republic)	25,179,148

9. Gold is not at a premium.

10. Law reorganizing the Bank of the Republic. Copy of the same, together with annual report for 1911, is inclosed herewith. Laws said to be in course of preparation cover the subject of requiring transportation agencies, etc., to furnish adequate statistics to the Government on monetary and financial subjects.

11. There is no mint report. I inclose herewith pamphlet entitled "La Moneda de Plata y la Emisión Menor" ("Silver coin and the issue of minor coin"), (1906), by Octavio Morató, assistant manager of the Bank of the Republic, Montevideo, in which will be found tables showing issues of silver and nickel coins, together with the legal characteristics of each coin. Mr. Morató assures me that the information contained therein is up to date (1912).

12 (*a*). Transportation services are not at present required to give data on the importation and exportation of precious metals, and therefore very little information is available on this subject. However, see attached unofficial statements, furnished me through the Bank of the Republic, showing the value of various kinds of gold imported from England, reduced to pounds.

GOLD IMPORTS.

Sept. 1, 1908, to Aug. 31, 1909[1]	£19,175,058
Sept. 1, 1909, to Aug. 31, 1910[1]	10,162,500
Sept. 1, 1910, to Aug. 31, 1911[1]	3,324,640
Jan. 1, 1912, to Mar. 25, 1912	2,630,000

VENEZUELA.

1 and 2 (*a* and *b*). Gold and silver coined during the calendar year 1911:

Denomination.	Gold.		Silver.	
	Pieces.	Value.	Pieces.	Value.
New coinage:				
20 bolivars	120,000	*Bolivars.* 2,400,000		*Bolivars.*
5 bolivars			900,000	7,500,000
2 bolivars			750,000	
1 bolivar			1,500,000	
Total	120,000	2,400,000	3,150,000	7,500,000

In November a coinage of 3,000,000 bolivars in gold of 20 bolivars each and 7,000,000 bolivars in silver was authorized in addition to that mentioned above. This new coinage was received in 1912 although some of it was coined in 1911. The silver was to be of the following denominations:

	Pieces.
5 bolivars	1,000,000
2 bolivars	500,000
1 bolivar	1,000,000
½ bolivar	600,000
¼ bolivar	800,000

All of the foregoing coinage was made at Paris, France. There is no mint in operation in the country.

3, 4, and 5. No data obtainable.

7. Stock of gold and silver in the country on December 31, 1911:

[1] No exports of silver.

Gen. J. V. Gomez, Constitutional President of the Republic, considering:

That the coinage of gold and silver ordered by executive disposition of July 9, 1910, does not cover the amount prescribed by the National Congress in its decree of June 20, last, and also that that first coinage not having been sufficient to cover the necessity of business and the circulation which the Executive Power had in mind in its referred to decree,

Decrees:

Art. 1. Within the limits of that order by the National Congress in its decree of June 20, 1910, ordered to be executed the 25th of the same month, a new coinage of gold and silver coins shall be made through the Bank of Venezuela in the following proportion:

For the gold, two million bolivars (B. 2,000,000) in pieces of twenty bolivars (B. 20);

For the silver, three million bolivars (B. 3,000,000) in this proportion: Two million bolivars (B. 2,000,000) in pieces of 5 bolivars (B. 5); five hundred thousand bolivars (B. 500,000) in pieces of two bolivars (B. 2); five hundred thousand bolivars (B. 500,000) in pieces of one bolivar (B. 1).

Art. 2. The introduction of this sum shall be made through the customhouse of La Guaira without any charges, and in only one lot for the gold, and for the silver in lots of not less than one million bolivars (B. 1,000,000) monthly.

The ministers of interior relations and of finance and public credit are in charge of the execution of the present decree.

Given, signed, and sealed with the Seal of the Federal Executive and countersigned by the minister of interior relations and of finance and public credit at the

Federal Palace in Caracas the fourth of February, one thousand nine hundred and eleven. Year 101 of the Independence and 52 of the Federation.

J. V. GOMEZ.

Countersigned:
The Minister of Foreign Relations.

COINAGE OF MONEY.

The Congress of the United States of Venezuela decrees the following:

LAW CONCERNING THE COINAGE OF MONEY.

ART. 1. There shall be made a coinage of ten million bolivars (B. 10,000,000) in coins of gold and silver in the following proportion: Three million bolivars (B. 3,000,000) in gold coins of the value of twenty bolivars (B. 20); seven million bolivars in silver coins as follows: Five million bolivars (B. 5,000,000) in pieces of five bolivars (B.5); one million bolivars (B.1,000,000) in pieces of two bolivars (B.2); one million bolivars (B.1,000,000) in pieces of one bolivar (B.1), fifty centimos of a bolivar (B.0.50) and twenty-five centimos of a bolivar (B.0.25), proportionally.[1]

ART. 2. The Federal Executive is authorized to arrange for and to carry into effect the before-mentioned coinage in accordance with the provisions of law.

Given in the Federal Legislative Palace at Caracas on the thirteenth day of the month of November, one thousand nine hundred eleven, years 102d of the independence and 53d of the federation.

The President.

P. GUISEPPI MONAGAS.

The Vice President.

The Minister of Finance and Public Credit,

ANTONIO PIMENTEL.

STATUS OF FOREIGN GOLD COINS IN VENEZUELA.

Foreign gold coins in recent years have not had a legal tender status in Venezuela, but their circulation as merchandise has been permitted, and they have been used rather extensively by merchants in settling balances among themselves. The rates at which they have been received and paid out correspond quite closely to the bullion value of the pure gold contained.

On the 15th of January the Government of Venezuela issued a decree which in addition to fixing the values of the foreign gold coins found in circulation in the country goes a step further in stating that public offices must receive and pay out these coins at the fixed rates and prescribes penalties for noncompliance with the decree. Nothing is prescribed as to offering or acceptance between individuals, but but no other rates than those officially prescribed can be practicable.

The decree is as follows:

FOREIGN GOLD COIN (LEGAL VALUE).

I, Gen. J. V. Gomez, President of the United States of Venezuela, considering:

That the law in force regulating the national money, although declaring foreign gold to be merchandise, and while it protects and favors its circulation, leaves the price subject to the fluctuations of supply and demand, making it necessary to have in consequence a tariff of values setting out the rules that the Government adopts

[1] NOTE.— 500,000 B. in pieces of 1 B.
300,000 B. in pieces of 0.50 B.
200,000 B. in pieces of 0.25 B.
1,000,000 B. as above stated.

in the matter; therefore, in use of the power which paragraph nine of article eighty of the national constitution confers on me,

Decree:

ARTICLE 1. The following tariff of values by which all the offices or institutes which directly or indirectly hold or receive public funds or which are the object of any prerogative on the part of the National Government will receive and pay foreign gold coins:

	Bolivars.
20-franc piece of France, Belgium, Italy, and Switzerland	20.00
Fractions in proportion.	
English sovereign or pound sterling	25.25
Half sovereign in proportion.	
Spanish gold onza, onza patriota, Central American onza of any year, Colombian onza of weight 25–8.064 and .900 fine, the same for those of the other South American States	80.00
Gold of the United States of North America, twenty-dollar gold piece	104.00
Fractions in proportion.	
German gold, the double crown piece, or 20 marks	24.75
Fractions in proportion.	
Double condors of Colombia	100.00
Fractions in proportion.	
Piece of 20 soles of Peru	100.00
Fractions in proportion.	
Mexican onza of the weight of 33.770 and .875 fine	100.00
The Spanish Isabelina of 25 pesetas	25.00
Fractions in proportion.	

ART. 2. Any infraction of this decree will be punished with the penalties prescribed for those who refuse to receive legal money.

ART. 3. The importation of foreign gold will be regulated by a separate resolution in conformity with the law on this subject matter.

ART. 4. The ministers of the interior and of finances and public credit are charged with the execution of this decree.

Done, signed, sealed with the seal of the Federal Executive, and countersigned by the ministers of the interior and of finances and public credit, in Maracay, January 15, 1912, 102d year of independence and 53d of federation.

J. V. GOMEZ.

Countersigned:
The Minister of the Interior,

F. L. ALCANTARA.

Countersigned:
The Minister of Finances and Public Credit,

ANTONIO PIMENTEL.

The values assigned to the foreign gold coins by the foregoing decree were those generally in use previously, with one exception. The Spanish and Latin American onzas or doubloons had been received at the rate of 82 bolivars each instead of 80 as set forth in the decree. This has caused a loss of 2 bolivars (bolivar equals 19.3 cents United States currency) on each piece to the holders, and this has not been well received by those who have had any quantity of the pieces on hand. As many of the doubloons were old, a large proportion of the Spanish pieces being coined more than 100 years ago, their weight has been reduced through wear, so that the bullion value has been in the past less than the rate at which they have been received. The new value of 80 bolivars may more correctly represent the value of the majority of the pieces found in circulation.

On the basis of the pure gold contents of the coins it will be seen that the English coins are given a circulating value about twelve one-hundredths of 1 per cent over par, the German coins are given a value of about twenty-four one-hundredths of 1 per cent, while American coins are given about thirty-four one-hundredths of 1 per cent over the value to which their pure gold contents would entitle them. The French, Belgian, Italian, Swiss, old Peruvian, and Spanish coins are received at par.

The quantity of Venezuelan gold coins in circulation, with weight and fineness in accordance with that of the Latin Monetary Union, is much greater than that of any class of foreign gold coin. There is probably a greater amount of American gold to be found in the country than of any other foreign nationality of modern coinage. In the interior in the region of the plains, the doubloons are more frequent.

The regulations for the introduction of foreign gold coin are as follows:

United States of Venezuela—Ministry of Interior Relations—Political Division—Ministry of Finance and Public Credit—Division of Public Credit—Caracas; January 16, 1912—102 and 53.

By order of the citizen President of the Republic, and in conformity with what is directed by article 3 of Executive decree dated the 15th of the present month, in

regard to the tariff of values which should govern foreign gold coins, the ministers of interior relations and of finance and public credit have agreed upon the following:

RESOLUTION.

1. Each introduction of gold coin into the country, of whatever kind it may be, will be scrupuously examined and inspected by an expert assayer whom the Federal Executive will nominate beforehand, in order that no money (coin) impaired in its weight or in its fineness may be imported; the assayer being responsible in everything respecting the weight and the fineness; and the chiefs of the customs being responsible for the weight only.

2. When by negligence or error of the expert or of the chiefs of the customshouses, there are imported gold coins impaired in their weight, or of a fineness less than that which they should have, he who is responsible shall be punished by a fine of from a thousand to five thousand bolivars in favor of the national treasury; and in case of a severe offense such as fraud, bribery, or any other similar, in addition to the fine indicated the guilty one shall be removed from his post and submitted to the ordinary tribunals.

The importation into the country of gold coins perforated filed, or worn away by abrasion is absolutely prohibited.

Communicate this and publish it.

For the Federal Executive.

The Minister of Finance and Public Credit. ANTONIO PIMENTAL.

MONEYS OF ACCOUNT IN VENEZUELA.

There are at present in vogue in Venezuela in daily use three different systems of monetary standards.

One is that based on the bolivar (equal to 19.3 cents United States currency) as the unit. This is in use by the Government in its reports and transactions, and is the official system. Quotations in this system are in bolivars and centimos, a bolivar being divided into 100 centimos, although the smallest coin in this system has a value of 5 centimos.

The second system has the "peso fuerte" or "dollar" as its unit, the units being commonly referred to as simply "fuertes." This "fuerte" is taken to be equal to 5 bolivars and to be divided into 100 centavos. In former years there were in circulation coins denominated centavos, but now the coins of 5 centimos are called centavos also.

The third system has the "peso macquina," usually simply termed "peso" as its unit. This "peso" has a value of 4 bolivars or eighty one-hundredths of a "fuerte." This unit is considered to be equal to 80 centavos, and to be divided into 8 reals, while the "fuerte" is considered to have 10 reals.

Some few of the mercantile houses keep their accounts with their customers in "fuertes" and so render their bills, but most of the establishments render their accounts in the "peso." The wholesale quotations of merchandise in the markets of Caracas, and published in the newspapers of that city are in the terms of "peso" and pounds (avoirdupois).

When accounts kept in the two last units are paid they are transformed into bolivars by multiplying by five or four, as the case may be, payments being made by Venezuelan currency coined gold and silver on the bolivar basis, or bank notes issued on the same system, although some foreign gold is in general acceptance at conventional rates.

The use of the "peso" system is a heritage from the time when the old Spanish peso or "piece of eight" reals was in common use, the more modern system not having yet supplanted the old system in the customs of the mercantile class.

Among the humbler classes making their purchases at the market the modern terms are seldom used. For instance, an article which would be worth 75 centimos of a bolivar or 15 centavos of a "fuerte" will almost invariably be quoted at "real y media," or a real and a half; or a purchase will be actually paid for by offering 6 bolivars, 62½ centimos in coin, while the seller has stated the value to be "thirteen reals and a quarter."

The use of these various differing systems is very confusing to any person not familiar with the customs of the country, and a knowledge of their existence will facilitate business relations with merchants of this Republic.

THOMAS W. VOETTER, *American Consul.*

LA GUAIRA, VENEZUELA, *January 17, 1912.*

NEW COINAGE.

[From Bulletin of the Pan American Union, December, 1911.]

The President has approved the bill providing for the mintage of coins to the value of 10,000,000 bolivars in gold and silver. The Banco de Venezuela will control this new coinage, which will be minted in the following denominations:

3,000,000 bolivars in gold of 20 bolivars.
5,000,000 bolivars in silver of 5 bolivars.
1,000,000 bolivars in silver of 2 bolivars.
300,000 bolivars in silver of one-half bolivar.
200,000 bolivars in silver of one-fourth bolivar.

1. Amount of gold and silver coined during the calendar year 1911:

Denomination.	Pieces.	Value.
GOLD.		*Crowns.*
100 crowns	1,175	117,500.00
20 crowns	59,313	1,186,260.00
10 crowns	1,285,667	12,856,670.00
Total	1,346,155	14,160,430.00
4 ducats [1] (45.16 crowns)	148,631	6,712,175.96
1 ducat [1] (11.29 crowns)	587,092	6,628,268.68
Total	2,081,878	[2] 27,500,874.64
SILVER.		
Maria-Theresa thalers (1780)	[3] 8,377,200	

[1] Trade coins.
[2] Of which amount 27,490,034.64 crowns was new coinage and 10,840 crowns recoinage of domestic coins.
[3] Trade coins, without fixed value (reckoned at 4.20966 crowns).

2. (*a* and *b*). None.
4. Gold and silver returned from use in industrial arts, deposited at mint for coinage:

Description.	Gold.	Silver.
	Fine ounces.	*Fine ounces.*
Scrap gold and waste of the gold and silver industry	877.5121	5,218.355

5. United States gold coin: Imported during 1911, none; melted at mint during 1911, 16,000 gold eagles.
7. Stock of gold and silver on December 31, 1911:

Character.	In public treasuries.	In banks.	In circulation.
	Crowns.	*Crowns.*	*Crowns.*
Gold coin	3,063,190.59	1,088,776,922.36	270,000,000–320,000,000
Gold bullion		203,087,854.29	
Silver coin	4,163,549.38	275,833,368.00	300,000,000–350,000,000
Total	7,226,739.97	1,567,698,144.65	570,000,000–670,000,000

In the metal store for 1911 there are still to be counted (according to article 84 of the bank statutes):

	Crowns.
Nickel and bronze coins	8,002,893.59
Gold drafts on foreign places	60,000,000.00
Silver coins	275,833,368.00
Gold stock	1,291,864,776.65
Total metal stock	1,635,701,038.24

8. Amount of bank notes outstanding at the end of the year 1911:

Item.	Notes outstanding.	Gold holdings.	Legal-tender silver holdings.
	Crowns.	*Crowns.*	*Crowns.*
Issued by Austro-Hungarian Bank	2,540,960,650	1,291,864,776.65	275,833,368

The store of metal comprised 64.3 per cent of the circulation of bank notes to be covered. The circulation of bank notes in excess of 905,259,611.76 crowns was covered by banks.

9. The rates of exchange of foreign sight bills on Berlin, London, and Paris at the Vienna Bourse in the year 1911 may be seen from the following statement:

Items.	Par value.	Average.	Maximum.		Minimum.	
			Date.	Value.	Date.	Value.
	Crowns.	*Crowns.*		*Crowns.*		*Crowns.*
Berlin, for 100 marks	117.563	117.497	Sept. 28 and 30	118.025	Feb. 21 and July 28.	117.200
London, per pound	240.174	240.366	Sept. 30 and Oct. 2.	241.900	Apr. 21 and 22	239.725
Paris, for 100 francs	95.226	95.130	do	96.125	Apr. 15, 20, and 26 and May 4.	94.725

10. Laws passed during 1911:

Law of August 8, 1911 (R. G. Bl., No. 157), concerning the prolongation of the privileges of the Austria-Hungarian Bank and the mints in agreement therewith and the regulation in connection with settling their transactions.

Regulation by the administrative council of the Empire, representing the Empire and territory, and the administration of the territory, in execution of the law of August 8, 1911 (No. 157), of September 16, 1911 (R. G. Bl., No. 188), sanctioning the issue of the Hungarian crown by the mint, and its standard valuation, and also concerning the order by the convention with regard to the issue of bank notes of 10 crowns by the Austria-Hungarian Bank, sustaining the agreement upon the paying into the bank of native gold coins with respect to the limitation of time for the redemption of the bank notes of 10 crowns, and concerning the metallic stock of the bank with relation to the old debt of the bank of 80,000,000 guldens, through this decree to be placed upon a more solid basis. To become effective January 1, 1911.

Regulation by the finance ministry of September 30, 1911 (R. G. Bl., No. 197), in agreement with the department of commerce and the railroads department regarding the admission of the native Montenegrin gold coins of 100 perpera, 20 perpera, and 10 perpera; silver coins of 5, 2, and 1 perpera; nickel coins of 20 and 10 para, and bronze coins of 2 and 1 para, in accordance with section 13 of Article III of the imperial decree of September 26, 1899 (R. G. Bl., No. 176), for payments of customs duties, taxes, postal charges; in the imperial royal treasury and in public pay offices in the chief administrative districts of the cities of Cattaro and Ragusa for the present, likewise in the pay offices of the cities of Zara, Sebenico, Spalato, and in the Methovic Exchange Market. The imperial royal Montenegrin native coins may, besides, be received for payments of postal charges in Vienna, Prague, and Trieste.

The native Montenegrin coins are to be received by the designated offices and by the public treasury at the following current valuation:

1 perper = 1 crown.
1 para=1 heller.

Lawfully arranged conformably to the country's national legal-tender of the crown standard, the silver coins to be accepted for customs charges up to 10 crowns only and relatively by individuals also, as follows: The 5-perpera pieces up to the amount of 250 crowns; the 2 and 1 perpera pieces up to 50 crowns; the nickel and bronze coins, in cash payments only up to their relatively equivalent value in silver coins.

This regulation is to enter into force on the day of its publication.

12 (*a*). Imports and exports of gold during the calendar year 1911:

Countries.	Imports.		Exports.		
	Gold coin.	Gold bullion.	Gold coin.	Gold bullion.	Gold ore.

Switzerland				7,870	
European Turkey			3,400	770	
Asiatic Turkey			3,900	460	
British possessions in Africa			5,600		
Other European possessions in Africa			3,100		
Other countries	40	120	2,410	80	800
Total	3,000	181,900	186,550	9,650	10,900
Value in crowns	350,982	15,825,300	12,607,880	839,550	12,263

The coinage of the Imperial Royal Hungarian Mint at Kremnitz during 1911 was as follows.

Denomination.	Pieces.	Value.
Gold coins:		*Crowns.*
20 crowns	62,755	1,255,100
10 crowns	1,827,589	18,275,890
Total	1,890,344	19,530,990
Silver coins:		
5 crowns	316	1,580
1 crown	4,094	4,094
Total	4,410	5,674

BELGIUM.

1. Silver coinage, 1911:

Denomination.	Pieces.	Value.
Domestic recoinage:[1]		*Francs.*
2 francs	2,775,000	5,550,000
1 franc	5,060,000	5,060,000
50 centimes	4,126,000	2,063,000
Total	11,961,000	12,673,000

[1] From metal obtained as follows:

	Francs.
Belgium écus (5-franc pieces)	11,324,080
Belgium worn coins of 2 francs, 1 franc, and 50 centimes	353,000
Demonetized 5-franc pieces of the late Independent State of the Kongo	44,500
Demonetized 2-franc, 1-franc, and 50-centime pieces of the late Independent State of the Kongo	87,000
Total	11,808,580

The excess of 864,420 francs in the nominal value of the recoinage resulted from the difference between the fineness of the écus melted and that of the new fractional coins struck and the loss of metal in remelting.

Of the 230,000,000 francs in new fractional silver coins authorized for Belgium by the Monetary Convention of November 4, 1908, the first annual quota of 10,380,000 francs were coined in 1909, and of the second quota, up to the amount of 8,440,000 francs, were coined in 1910. In 1911, the 1,940,000 francs remaining from the second quota, and the third quota of 10,380,000 francs were coined. There were also recoined during 1911, 353,000 francs from Belgian worn fractional silver coins, making the coinage for the year 1911 of the amount of 12,673,000 francs.

2 (*a*). Coinage executed at the Belgian Mint for foreign Governments during 1911:

ROUMANIA.

Classification.	Pieces.	Value.
Silver coins:		*Lei.*
50 bani	1,400,000	700,000
1 leú	300,000	300,000
Total	1,700,000	1,000,000

SALVADOR.

Silver coins: 1 peso	500,000	*Pesos.* 500,000

SIAM.

Bronze coins: 1 stang	30,000,000	*Stangs.* 30,000,000
Nickel coins: 10 stangs	500,000	5,000,000
Total	30,500,000	35,000,000

4. None.

6. Monetary stock, 1910: [1] For five years the circulation of gold in Belgium has been continually decreasing. At present it is almost nil.

On December 31, 1910, the national bank had a reserve of 125,694,390 francs in gold coin, besides foreign drafts of the value of 173,432,168 francs, all negotiable in gold. With regard to the amount of Belgian écus in existence on that date, there were presumed to be less than 350,000,000 francs.

The amount of écus of 5 francs in circulation in Belgium was recently estimated at 200,000,000, but this amount has been much reduced by reason of the unfavorable exchange upon France, which is permanent encouragement for exportation; the circulation does not now appear to be but little more than from 100,000,000 to 150,000,000 francs. The national bank, which pays in silver, is forced to have periodical recourse to Paris. They advanced to them in 1898, 38,000,000 francs; in 1899, 60,000,000; in 1900, 35,000,000; in 1901, 14,500,000; in 1902, 11,000,000; in 1903, 25,000,000; in 1904, 12,000,000; in 1905, more than 24,000,000; in 1906, 81,500,000; in 1907, 98,500,000; in 1908, 79,000,000; in 1909, 90,000,000; in 1910, 184,500,000; being a total amount of 753,500,000 francs in 11 years.

Exchange upon Paris in 1910 was unfavorable. The premium varied generally between 3 and 4½ per cent; the average was 3.4 per cent, but during the last three months of the year the situation improved. At the end of December the exchange was lower by about 1½ per cent. The effect of that premium was the exportation of écus from circulation. This movement has been palliated by realizations upon foreign drafts by the bank.

The metallic reserve of the National Bank of Belgium: [2]

Composition of reserve.	Dec. 31, 1910.	Dec. 31, 1911.
	Francs.	*Francs.*
Gold coins	125,694,390.00	189,114,130.00
Silver 5-franc pieces	64,469,105.00	45,130,235.00
Odd (mixed) and copper coins	13,237,828.28	12,462,748.97
Comparative total reserve	203,401,323.28	246,707,113.97

Amount of bank notes in circulation on December 31, 1911: 969,763,570 francs.

7. Belgium has no State bank notes. The national bank only, placed under control of the Government, of which it is the cashier, issues notes payable in cash on sight. These notes are of legal circulation among the public as long as the bank pays them on sight and the Government accepts them as payment.

On December 31, 1911, the average value of the notes in circulation was 882,189,800 francs, divided as follows:

	Francs.
1,000 francs	209,932,000
500 francs	53,106,000
100 francs	342,262,700
50 francs	90,518,800
20 francs	186,370,300
Total	882,189,800

On that date the amount of metallic specie in possession of the bank was 246,707,113 francs; besides this the bank possessed 149,311,884 francs in portfolio drafts (securities) on foreign countries, payable in gold.

8. Regarding the monetary circulation in the interior of the country there exists no premium on gold over silver currency or notes of the national bank.

Course of exchange at Brussels upon Amsterdam, Berlin, London, and Paris, 1911:

Amsterdam, note at limited date (100 florins, par 208.32 francs):	
Highest price	210.60
Lowest price	208.75
Average price	209.75
Berlin, note at limited date (100 marks, par 123.45 francs):	
Highest price	124.42
Lowest price	123.35
Average price	123.85
London, on sight (1 pound sterling, par 25.22 francs):	
Highest price	25.43
Lowest price	25.29
Average price	25.35
Paris, on sight (100 francs):	
Highest price	100.75
Lowest price	100.12
Average price	100.35

[1] From report of the Minister of Finances, Administration Coins and Medals, Paris, 1911.
